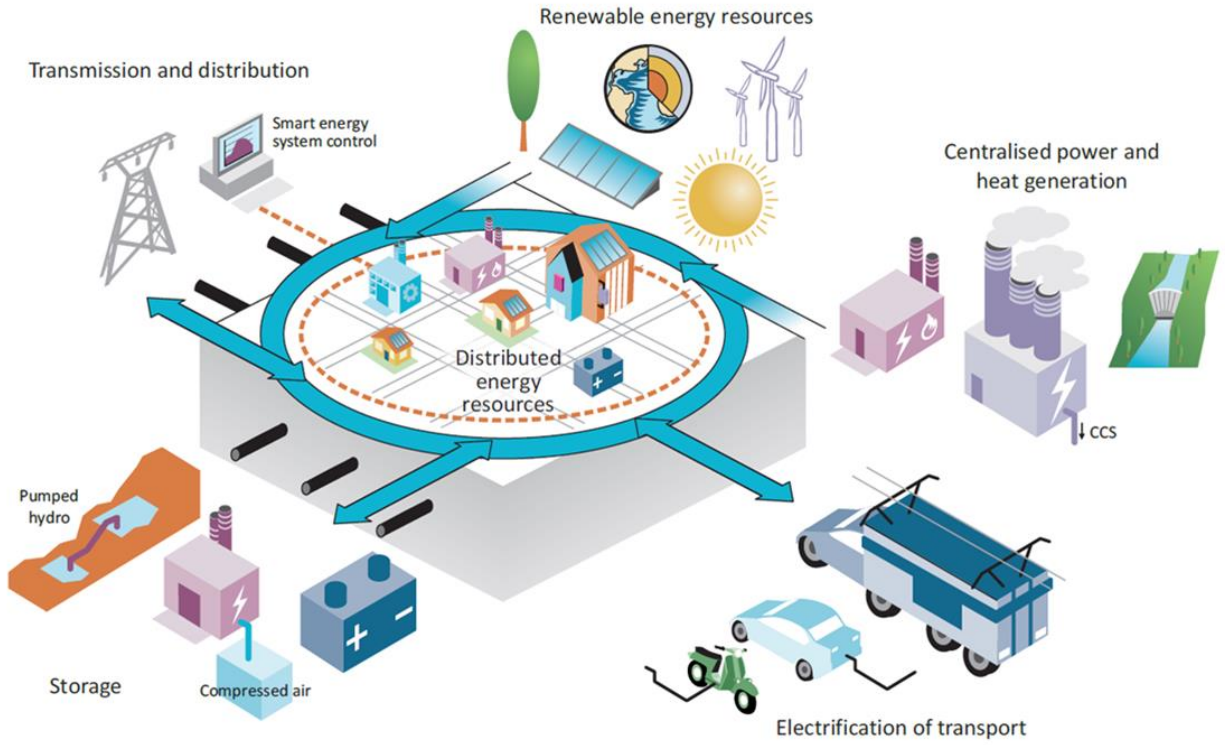
FOR EUROPE

Sustainable Energy System

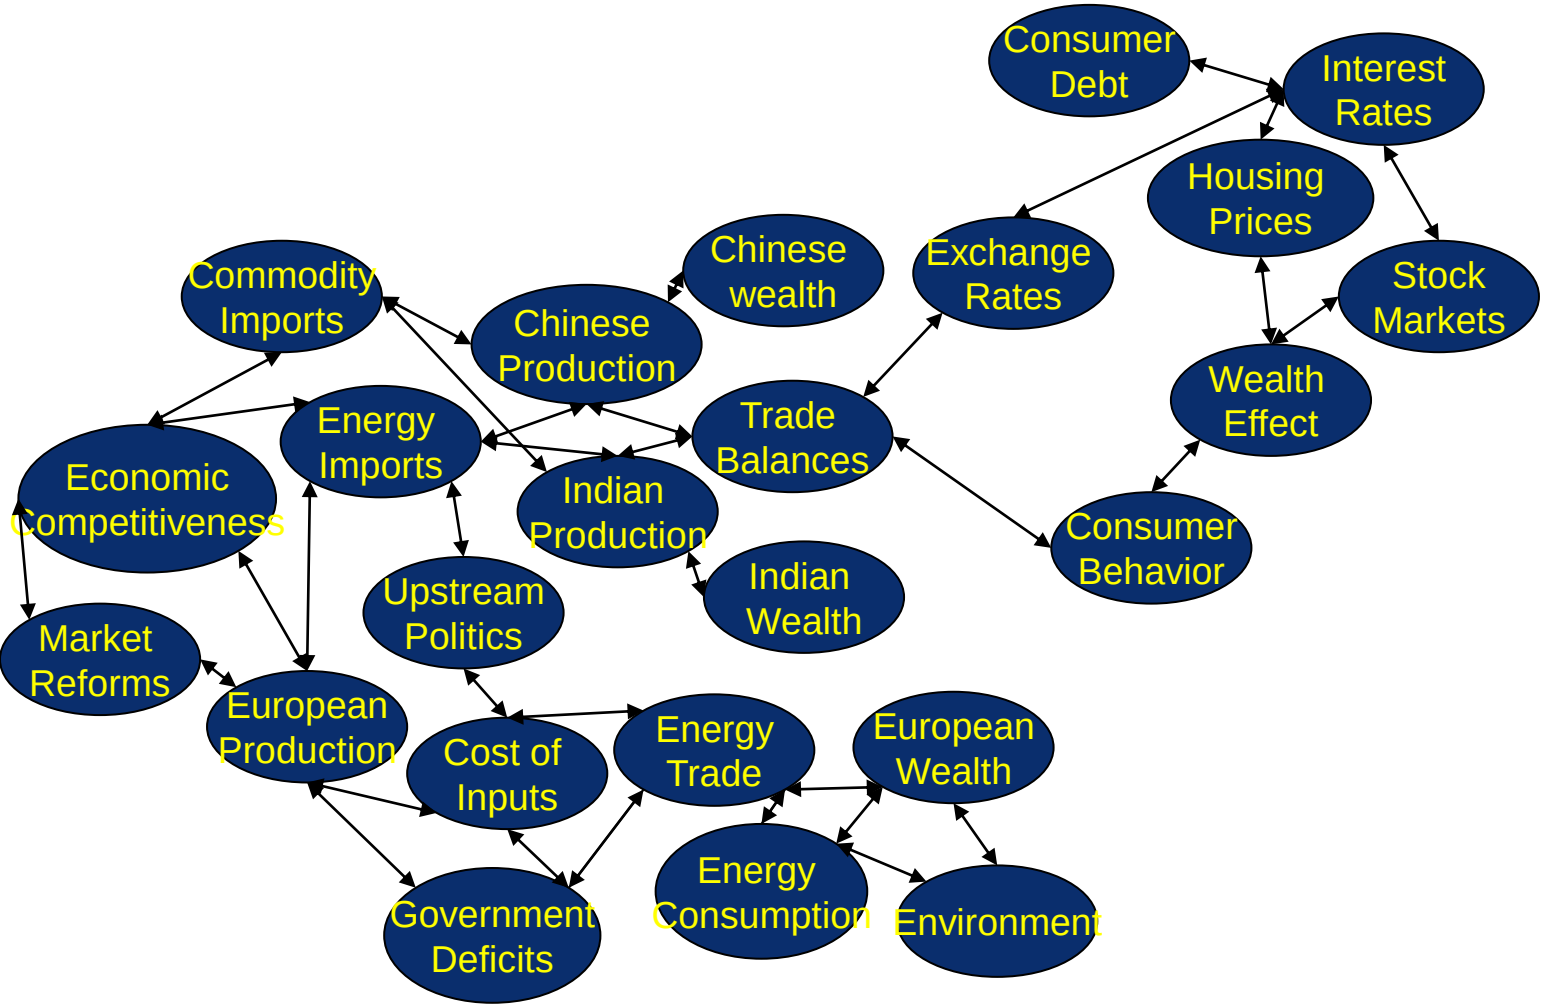


A sustainable energy system is a smarter, multidirectional and integrated energy system that requires long-term planning for services delivery

Hammamet Declaration:

- Energy Market Reform
- Energy Efficiency
- Renewable Energy
- Energy Access
- Energy Security
- Finance and investment
- Technology
- Energy Data, Indicators and Analysis

Enhancing Interconnectivity through regional commissions



With relatively modest distances between supply sources and demand,

efficient integration of energy markets would significantly improve the:

- technical,
- social,
- economic, and
- environmental

contributions that energy could make in the UNECE region.
