The **user needs** identified in this phase will be on the origin of the **survey objectives** definition.
It must be identified also the **legal framework** for these needs, if it exists.
The **statistical outputs** needed are identified based on the **user needs** too and will determine not only the **concepts** underlying them, but also the concepts that shall be measured to obtair the statistical outputs identified.
The **data sources** where the data needed to obtain the statistical outputs required shall be identified in this phase too.
