Thomas

Further to your query regarding the capping trial at the Port of Tyne monitoring of the area of confined disposal is ongoing and a number of reports have been received and reviewed by CEFAS. The main point which has so far come out of the monitoring is that whilst the contaminated material was successfully capped at the centre of the disposal site it was not to the level originally proposed. CEFAS are currently carrying out a risk assessment on the integrity of the cap which is due to report at the end of the month before a decision can be made as to whether any action is required.
