Outline

SafeFITS Application Functionalities and Requirements

High Level Architecture

Data Model

Website Platform Structure

User Interface

Constantinos Antoniou (TUM) | UNECE - SafeFITS | 30 June 2017

2

Introduction

Successful deployment of SafeFITS is linked to the dissemination potential

Components:

- Interactive Visualizations
- Implementation of the Statistical Model

Expected Functionalities:

- Forecasting of road safety related indicators
- Benchmarking among different countries
- Produce reports with the results of the model

Core Functional Requirements

Implementation of Statistical Model

- Base year estimation
- Forecast based on intervention groups
- Manual Selection of interventions and reactive behaviour

Visualization

- Interactive
- Responsive

Report Generation

- Results
- Visualization
- Multiple formats

Database Integration

- Concise expandable database structure

Supporting Functional Requirements

User Interface

- Follow widely accepted design conventions and guidelines
- Concise and logical structure of the different functionalities
- Following a path logic starting from general and moving to specific

User Management

- Password protected
- Authorized users

System Documentation

- System Administrators
- End-users (help)

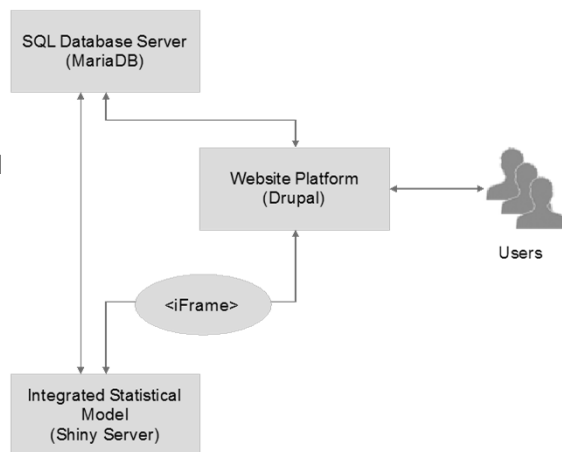

User Interactions

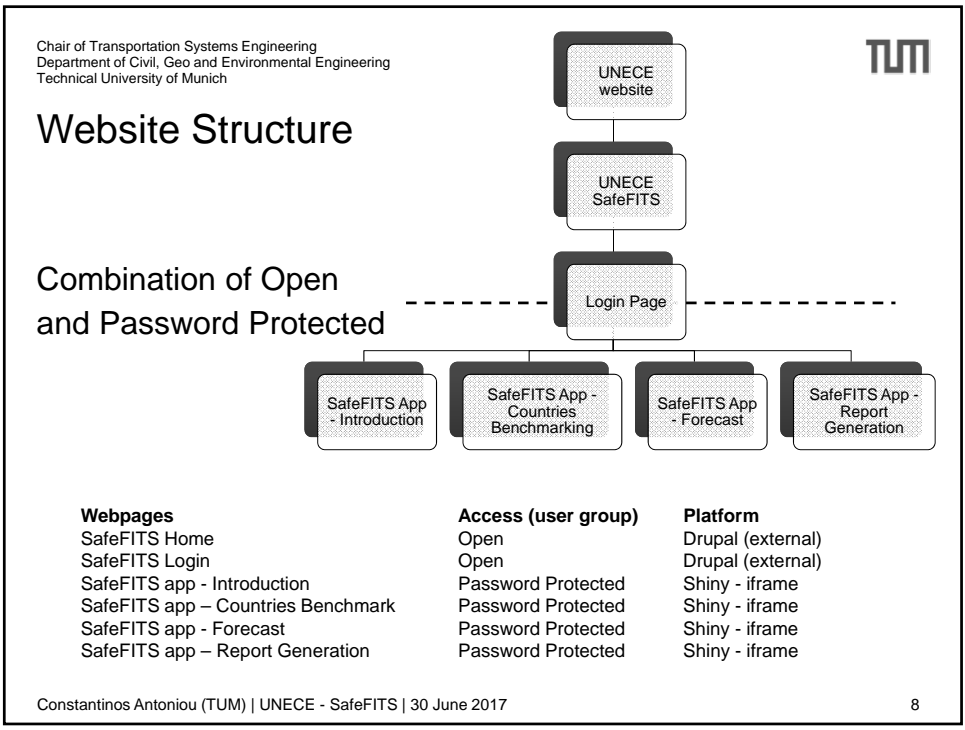

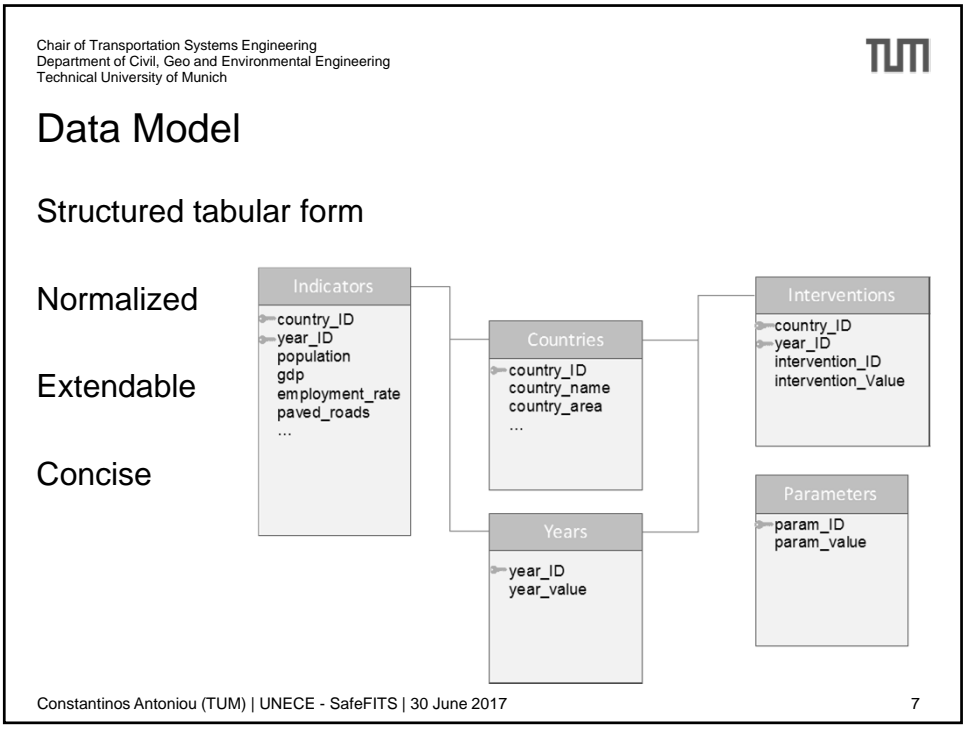

- Straightforward platform design
- Predictable behaviour

High Level Architecture

Components:

- Database: MariaDB
- Website Platform: Drupal
- Statistical Model: Shiny
- Connection: <iFrame>

User Interface Design

Top navigation bar: tab-based interface

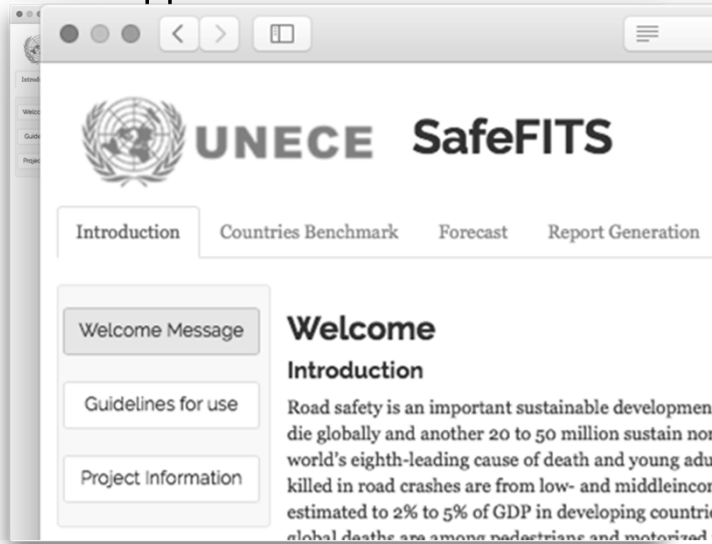

Persistent: Move across tabs without loss of information

Responsive: Reactive Design (without submit button)

Forgiving: Reset opportunity

SafeFITS App: Introduction

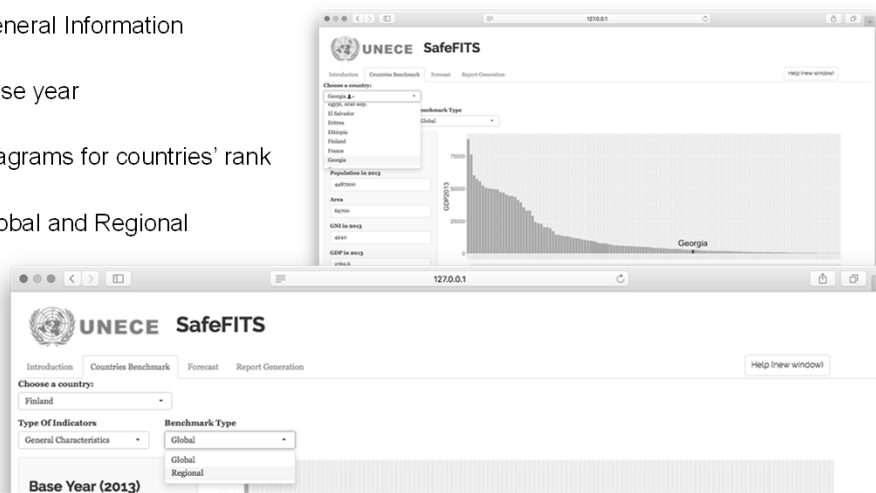

SafeFITS App: Countries' Benchmark

General Information

Base year

Diagrams for countries' rank

Global and Regional

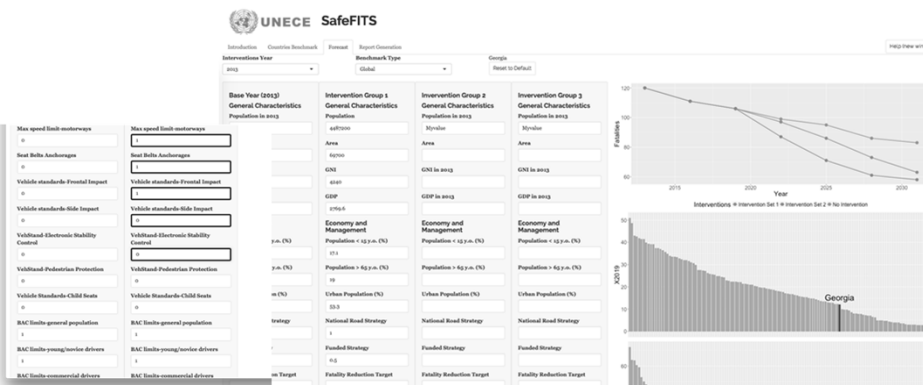

SafeFITS App: Forecast

Implementation of the Statistical Model

Benchmarking of country with implementation of interventions

Manual selection and implementation of interventions

Integrated Statistical Model Application

Shiny R

- Based on R Language for Statistical Computing
- Fills the gap between offline statistical implementations and web-based solutions
- Dedicated and directly integrated, application server
- Modular design
- Libraries for model estimation and prediction

<https://www.r-project.org>

<https://www.rstudio.com>

Report Generation and Documentation

Report Generation

- Optional Report Generation
- Multiple Data formats (pdf, html, MS Word)

Documentation

- User-friendly tool-tips
- Help in separate webpage

Live demo

Next steps

Today's discussion and feedback!

Finalization of the UI

Completion of the back-office logic

Pilot test

Beta testing

Deployment!

Thank you for your attention!
