

**PROPOSED AMENDMENT TO ECE REGULATION No. 13**

**Amendment to Regulation 13, Revision 5 on UNECE web site**

Transmitted by the expert from the UK

Annex 4, paragraph 2.1.1., amend the formula for calculating stopping distance for vehicles other than  $M_1$  used during the Type-O test with engine connected, to read:

$$0.1v + \frac{v^2}{103.5}$$

Current wording incorrectly reads:

$$0.1v + \frac{v^2}{103}.5$$

**Justification:**

During the preparation of Revision 5, part of the formula has been transposed. This change has a significant effect on the calculated stopping distance. The error is apparent in both the English and French versions.
