

# Update on 2D-IR-Tracc for WorldSID 50M

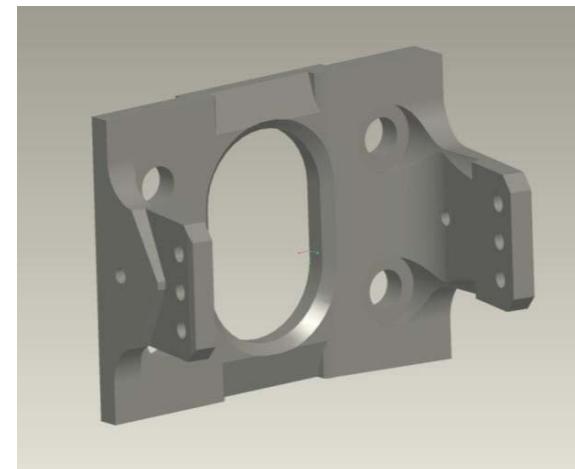

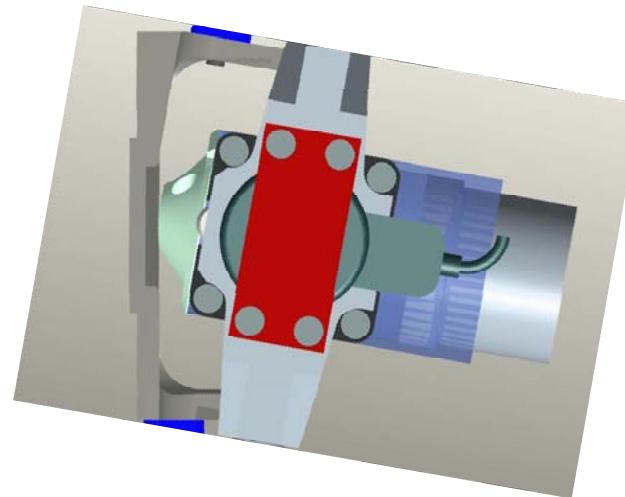

Bernard Been

September 2010

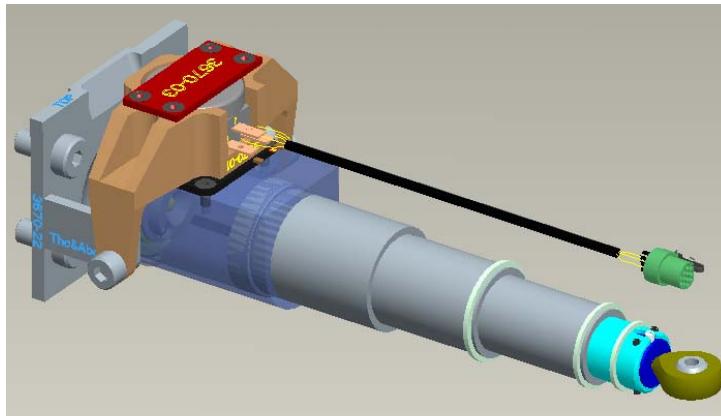

# Previous status: oblique axis

- ▶ 4 versions necessary
- ▶ Left struck side
  - 1x part IF 368-1 shoulder
  - 5x Part IF 367-1 thorax & abdomen ribs
- ▶ Right struck side
  - 1x part IF 368-2 shoulder
  - 5x Part IF 367-2 thorax & abdomen ribs

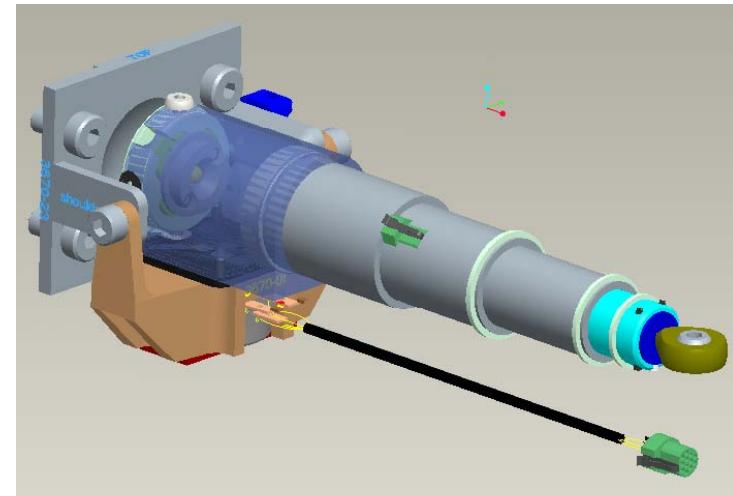

# Update straight axis used left and/or right struck side

► Part IF-367 for thorax  
and abdomen

► Part IF-368 for shoulder

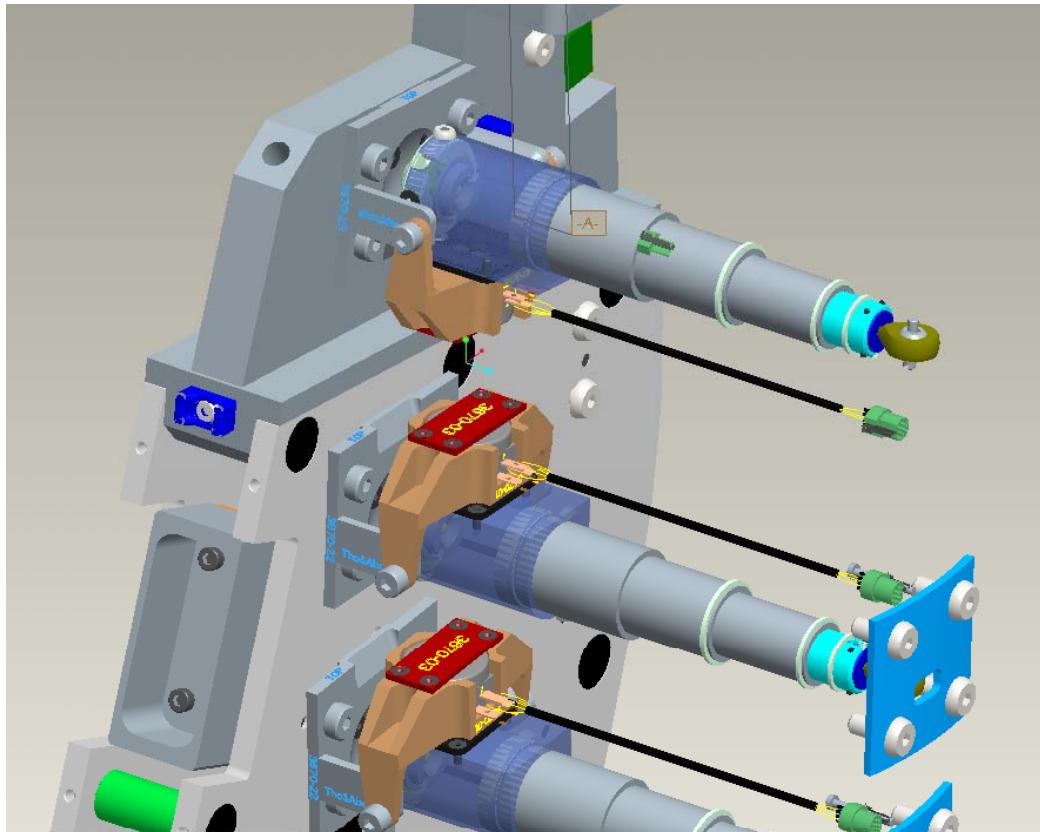

Quant	Part NR	Description
1	IF-368	2D-IR-Tracc for shoulder WorldSID 50M
5	IF-367	2D-IR-Tracc thorax & abdomen ribs WorldSID 50M
6	3670-08	Non struck side ballast rib clamps

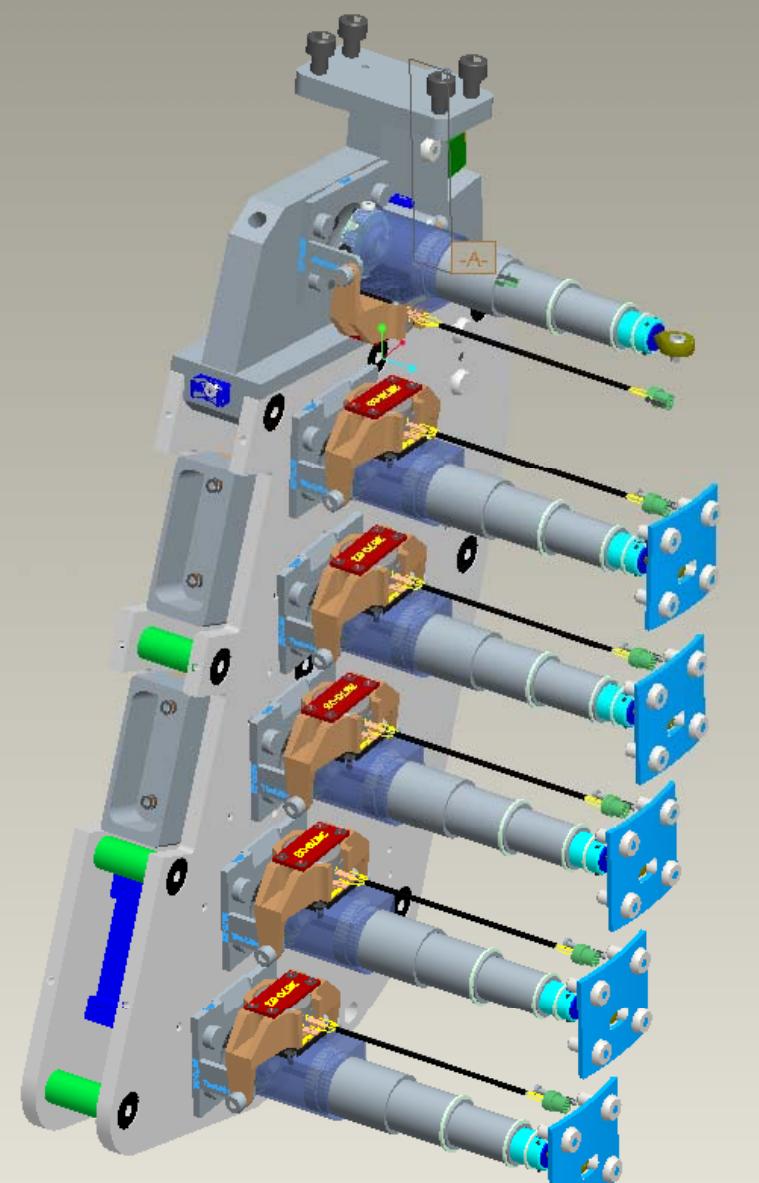

# Specifications

- ▶ Single struck side use in combination with non struck side ballast
- ▶ Dual struck side use without ballast
- ▶ Compression range identical 75mm
- ▶ Up to 45° forward and backward motion
  - Larger ROM than standard IR-Tracc ( $\sim \pm 30^\circ$ )
- ▶ Implementation without modifications
  - 2D-IR-Traccs replace standard IR-traccs and rib clamps

# Single struck side use

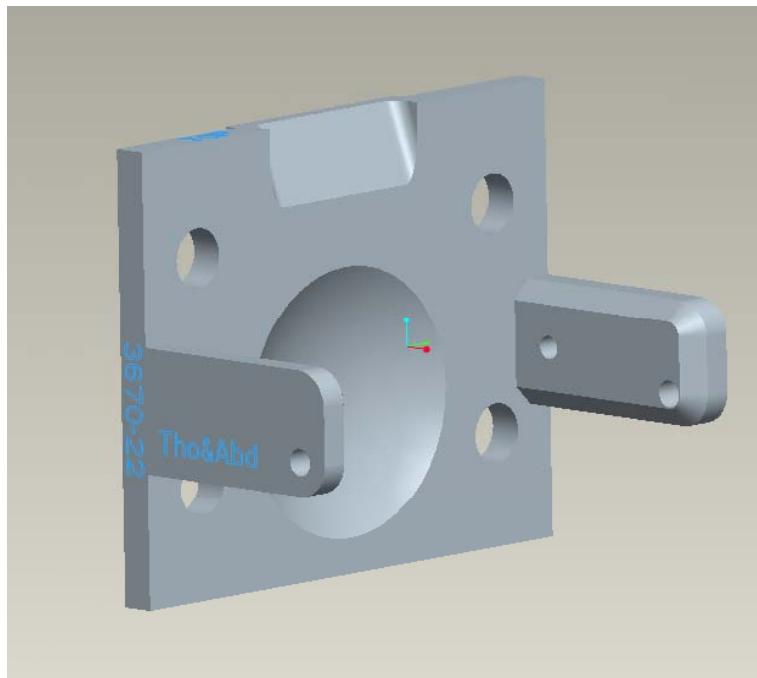

Note deviating Shoulder 2D-IR-Tracc orientation

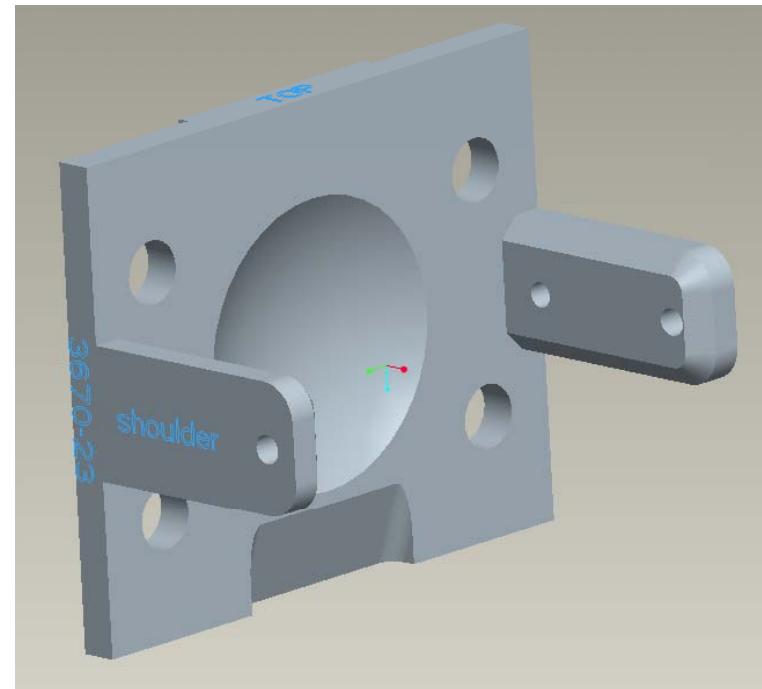

# Bracket designs

Part 3670-22  
thorax and abdomen bracket

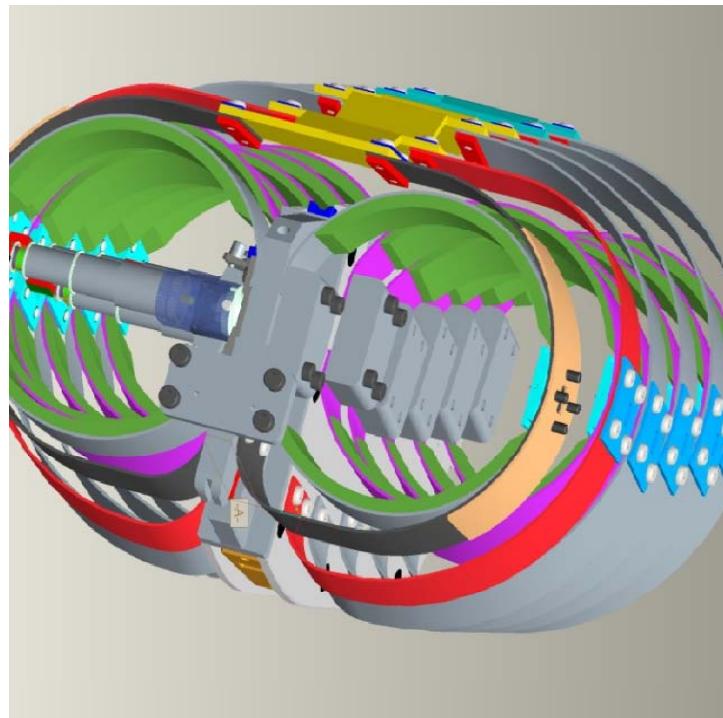

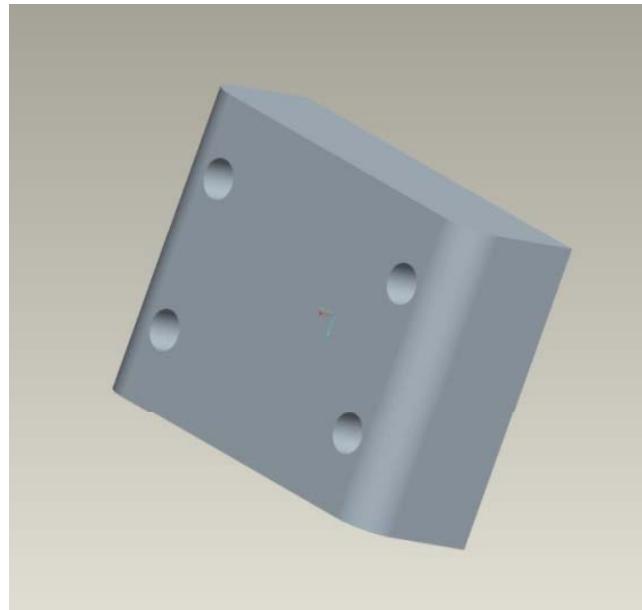

Part 3670-23 shoulder bracket

# Single struck side use

- ▶ Part 3670-08 Ballast rib clamp in non struck side chest cavity
- ▶ Remove existing ballast or battery box

# Instrumented left and right struck side simultaneously

- ▶ Research occupant to occupant interaction in side impact
- ▶ Replace ballast rib clamps by IF-367 and IF-368

Quantity	Part NR	Description
2	IF-368	2D-IR-Tracc for shoulder WorldSID 50M
10	IF-367	2D-IR-Tracc for thorax & abdomen ribs WorldSID 50M
