

UN Regulation No. 116 and innovative vehicle alarm systems/ anti-theft systems

The Commission has received several requests on new innovative systems and their possible approval in accordance with Regulation No. 116.

A first type of systems relates to systems which enable opening of cars via smartphone. The purpose of this solution is to simplify „private car sharing”.

The second type of applications are vehicle alarm systems (VAS), which send a silent alarm to a security service, which receives alarms around the clock, via the internet.

The Commission would like to receive the view of the experts on such new systems:

- 1) Is it possible to type-approve such systems in accordance with Regulation No. 116 in particular silent Vehicle Alarm Systems?
 - 2) If not do you consider that work to amend Regulation No. 116 would solve the problem? Would you be ready to contribute to this work?
-
