

## **Direction Indicator cat. 5 with sequential activation of the light sources**

- The sequential activation of the light sources of a direction indicator is only allowed for direction indicator of categories 1, 2, 11 and 12 according to UN Regulations No. 6 and No. 148.
- However, there are Direction Indicators of categories 5 and 6 with sequential activation offered on the market.
- One approval for a direction indicator of category 5 is known, where it is specified in the communication that the activation of the light sources is sequential.
- In the opinion of Germany and the United Kingdom, this approval does not conform to the requirements of the UN Regulation and is invalid.
- Can GRE agree?
