Economic Commission for Europe

Inland Transport Committee

Working Party on Inland Water Transport

Fifty-fourth session

Geneva, 13–15 October 2010

Item 3 of the provisional agenda

Exchange of information on measures aimed at promoting transport by inland waterway

Current state of the European network of inland waterways of international importance

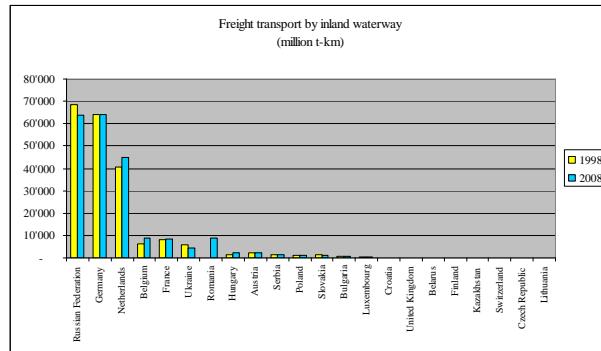

Addendum

Note by the secretariat

1. This document contains tables and figures referred to in the draft report on the current state of the development of the European network of inland waterways of international importance in the ECE region (ECE/TRANS/SC.3/2010/2).

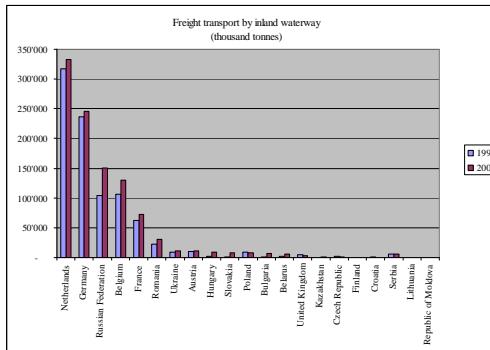

Data on the current state of the European network of inland waterways of international importance

Table 2

Inland Waterways of International Importance (the 1996 European Agreement on Main Inland Waterways of International Importance)

Type of inland waterways	Classes of navigable waterways	Motor vessels and barges					Pushed convoys					Minimum height under bridges ¹ H (m)	Graphical symbols on maps		
		Type of vessel: General characteristics					Type of convoy: General characteristics								
		Designation	Maximum length	Maximum beam	Draught ²	Tonnage	Length	Beam	Draught ³	Tonnage					
1	2	3	4	5	6	7	8	9	10	11	12	13	14		
of inter-national importance	IV	Johann Welker	80–85	9.5	2.50	1,000–1,500		85	9.5 ⁴	2.50–2.80	1,250–1,450	5.25 or 7.00 ⁵			
	Va	Large Rhine vessels	95–110	11.4	2.50–2.80	1,500–3,000		95–110 ⁶	11.4	2.50–4.50	1,600–3,000	5.25 or 7.00 or 9.10 ³			
	Vb							172–185 ¹	11.4	2.50–4.50	3,200–6,000				
	VIIa							95–110 ¹	22.8	2.50–4.50	3,200–6,000	7.00 or 9.10 ³			
	VIIb		140	15.0	3.90			185–195 ¹	22.8	2.50–4.50	6,400–12,000	7.00 or 9.10 ³			
	VIc							270–280 ¹	22.8	2.50–4.50	9,600–18,000	9.10 ³			
								195–200 ¹	33.0–34.2 ¹	2.50–4.50	9,600–18,000				
	VII					⁷		275–285	33.0–34.2 ¹	2.50–4.50	14,500–27,000	9.10 ³			

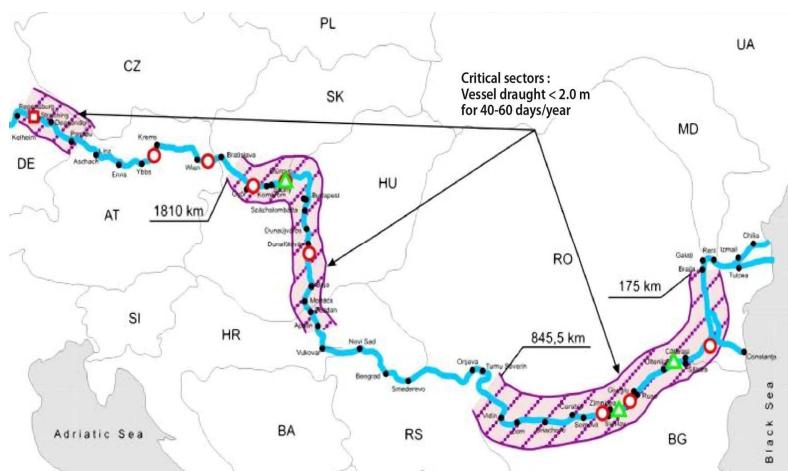

¹ Allows for a safety clearance of about 0.30 m between the uppermost point of the vessel's structure or its load and a bridge.² Allows for expected future developments in ro-ro, container and river-sea navigation.³ The draught value for a particular inland waterway to be determined according to the local conditions.⁴ Some existing waterways can be considered as class IV by virtue of the maximum permissible length for vessels and convoys, even though the maximum beam is 11.4 m and the maximum draught 4.00 m.⁵ Checked for container transport: 5.25 m for vessels transporting 2 layers of containers; 7.00 m for vessels transporting 3 layers of containers; 9.10 m for vessels transporting 4 layers of containers. 50% of the containers may be empty or ballast should be used.⁶ The first figure takes into account the existing situations, whereas the second one represents both future developments and, in some cases, existing situations.⁷ Convoys consisting of a larger number of barges can also be used on some sections of waterways of class VII. In this case, the horizontal dimensions may exceed the values shown in the table.
