Inland Transport Committee<br>World Forum for Harmonization of Vehicle Regulations<br>$169^{\text {th }}$ session<br>Geneva, 21-24 June 2016<br>Item 4.7.4 of the provisional agenda<br>1958 Agreement - Consideration of draft amendments<br>to existing Regulations submitted by GRPE

# Proposal for Supplement $\mathbf{3}$ to the $\mathbf{0 7}$ series of amendments to Regulation No. 83 (Emissions of $M_{1}$ and $N_{1}$ vehicles) 

## Submitted by the Working Party on Pollution and Energy*

The text reproduced below was adopted by the Working Party on Pollution and Energy (GRPE) at its seventy-second session (ECE/TRANS/WP.29/GRPE/72, paras. 12 and 13). It is based on ECE/TRANS/WP.29/GRPE/2016/4 as amended by para. 12 of the report. It is submitted to the World Forum for Harmonization of Vehicle Regulations (WP.29) and to the Administrative Committee AC. 1 for consideration at their June 2016 sessions.

[^0]
## Supplement $\mathbf{3}$ to the $\mathbf{0 7}$ series of amendments to Regulation No. 83 (Emissions of $M_{1}$ and $N_{1}$ vehicles)

Annex 4a-Appendix 7,
Paragraphs 5.1.1.1. to 5.1.1.2.7., amend to read:
"5.1.1.1. Test equipment and error
Time shall be measured to an error lower than $\pm 0.1 \mathrm{~s}$.
Speed shall be measured to an error lower than $\pm 2$ per cent.
During the test, elapsed time and vehicle speed shall be measured and recorded at a minimum frequency of 1 Hz .
5.1.1.2. Test procedure
5.1.1.2.1. Accelerate the vehicle to a speed $10 \mathrm{~km} / \mathrm{h}$ higher than the chosen test speed v .
5.1.1.2.2. Place the gearbox in "neutral" position.
5.1.1.2.3. For each reference speed point $\mathrm{v}_{\mathrm{j}}$, measure the time taken $\left(\Delta \mathrm{T}_{\mathrm{aj}}\right)$ for the vehicle to decelerate from speed
$v_{2}=v_{j}+\Delta v \mathrm{~km} / \mathrm{h}$ to $\mathrm{v}_{1}=\mathrm{v}_{\mathrm{j}}-\Delta \mathrm{vkm} / \mathrm{h}$
where:
$\Delta \mathrm{v} \quad$ is equal to $5 \mathrm{~km} / \mathrm{h}$
$\mathrm{v}_{\mathrm{j}}$ is each of the reference speed $[\mathrm{km} / \mathrm{h}]$ points as indicated in the following table:

| 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 | 110 | 120 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

5.1.1.2.4. Perform the same test in the opposite direction: $\Delta \mathrm{T}_{\mathrm{bj}}$
5.1.1.2.5. These measurements shall be carried out in opposite directions until, for each reference speed $\mathrm{v}_{\mathrm{j}}$, a minimum of three consecutive pairs of measurements have been obtained which satisfy the statistical accuracy $\mathrm{p}_{\mathrm{j}}$, in per cent, as defined below.

$$
p_{j}=\frac{t \cdot s_{j}}{\sqrt{n}} \cdot \frac{100}{\Delta T_{j}} \leq 3 \text { per cent }
$$

where:
$p_{j} \quad$ is the statistical accuracy of the measurements performed at reference speed $\mathrm{v}_{\mathrm{j}}$;
n is the number of pairs of measurements;
$\Delta T_{j} \quad$ is the mean coast down time at reference speed $v_{j}$ in seconds, given by the equation:
$\Delta \mathrm{T}_{\mathrm{j}}=\frac{1}{\mathrm{n}} \sum_{\mathrm{i}=1}^{\mathrm{n}} \Delta \mathrm{T}_{\mathrm{ji}}$
where $\Delta \mathrm{T}_{\mathrm{ji}}$ is the harmonic mean coast down time of the $\mathrm{i}^{\text {th }}$ pair of measurements at velocity $\mathrm{v}_{\mathrm{j}}$, seconds [ s ], given by the equation:

$$
\Delta \mathrm{T}_{\mathrm{ji}}=\frac{2}{\left(\frac{1}{\Delta \mathrm{Taji}}\right)+\left(\frac{1}{\Delta \mathrm{~T}_{\mathrm{bj}}}\right)}
$$

where $\Delta \mathrm{T}_{\mathrm{aji}}$ and $\Delta \mathrm{T}_{\mathrm{bji}}$ are the coast down times of the $\mathrm{i}^{\text {th }}$ measurement at reference speed $\mathrm{v}_{\mathrm{j}}$, in seconds [s], in opposite directions a and b , respectively;
$\mathrm{s}_{\mathrm{j}} \quad$ is the standard deviation, in seconds [ s ], defined by:

$$
\mathrm{s}_{\mathrm{j}}=\sqrt{\frac{1}{\mathrm{n}-1} \sum_{\mathrm{i}=1}^{\mathrm{n}}\left(\Delta \mathrm{~T}_{\mathrm{ji}}-\Delta \mathrm{T}_{\mathrm{j}}\right)^{2}}
$$

t is a coefficient given in the following table:
Coefficient $t$ as function of $n$

| $n$ | $t$ | $t / \sqrt{\mathrm{n}}$ | $n$ | $t$ | $t / \sqrt{\mathrm{n}}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | 4.3 | 2.48 | 10 | 2.2 | 0.73 |
| 4 | 3.2 | 1.60 | 11 | 2.2 | 0.66 |
| 5 | 2.8 | 1.25 | 12 | 2.2 | 0.64 |
| 6 | 2.6 | 1.06 | 13 | 2.2 | 0.61 |
| 7 | 2.5 | 0.94 | 14 | 2.2 | 0.59 |
| 8 | 2.4 | 0.85 | 15 | 2.2 | 0.57 |
| 9 | 2.3 | 0.77 |  |  |  |

5.1.1.2.6. If during a measurement in one direction any external factor or driver action occurs which influences the road load test, that measurement and the corresponding measurement in the opposite direction shall be rejected.
5.1.1.2.7. The total resistances, $\mathrm{F}_{\mathrm{aj}}$ and $\mathrm{F}_{\mathrm{bj}}$, at reference speed $\mathrm{v}_{\mathrm{j}}$ in directions a and b , are determined by the equations:
$F_{a j}=\frac{1}{3.6} \cdot M \cdot \frac{2 \cdot \Delta v}{\Delta T_{a j}}$
and
$\mathrm{F}_{\mathrm{bj}}=\frac{1}{3.6} \cdot \mathrm{M} \cdot \frac{2 \cdot \Delta \mathrm{v}}{\Delta \mathrm{T}_{\mathrm{bj}}}$
where:
$\mathrm{F}_{\mathrm{aj}} \quad$ is the total resistance at reference speed, j , in direction $\mathrm{a},[\mathrm{N}]$;
$\mathrm{F}_{\mathrm{bj}} \quad$ is the total resistance at reference speed, j , in direction $\mathrm{b},[\mathrm{N}]$;
M is the reference mass, $[\mathrm{kg}]$;
$\Delta \mathrm{v} \quad$ is the delta speed around $\mathrm{v}_{\mathrm{j}}$, taken according to 5.1.1.2.3.
$\Delta \mathrm{T}_{\mathrm{aj}}$ and $\Delta \mathrm{T}_{\mathrm{bj}}$ are the mean coast down times in directions a and b , respectively, corresponding to reference speed $v_{j}$, in seconds [s], given by the following equations:
$\Delta \mathrm{T}_{\mathrm{aj}}=\frac{1}{\mathrm{n}} \sum_{\mathrm{i}=1}^{\mathrm{n}} \Delta \mathrm{T}_{\mathrm{aji}}$
and $\Delta \mathrm{T}_{\mathrm{bj}}=\frac{1}{\mathrm{n}} \sum_{\mathrm{i}=1}^{\mathrm{n}} \Delta \mathrm{T}_{\mathrm{bji}}$
5.1.1.2.8. The following equation shall be used to compute the average total resistance:
$\mathrm{F}_{\mathrm{j}}=\frac{\left(F_{\mathrm{aj}}+F_{b j}\right)}{2}$
5.1.1.2.9. For each reference speed $\mathrm{v}_{\mathrm{j}}$ calculate the power $\left(\mathrm{P}_{\mathrm{j}}\right)$, $[\mathrm{kW}]$, by the formula:
$P_{j}=\left(F_{j} \cdot v_{j}\right) / 1,000$
where:
$\mathrm{F}_{\mathrm{j}} \quad$ is the average resistance at reference speed, $\mathrm{j},[\mathrm{N}]$;
$\mathrm{v}_{\mathrm{j}} \quad$ is the reference speed, $\mathrm{j},[\mathrm{m} / \mathrm{s}]$, defined in 5.1.1.2.3.
5.1.1.2.10. The complete power curve ( P ), $[\mathrm{kW}]$, as a function of speed, $[\mathrm{km} / \mathrm{h}]$, shall be calculated with a least squares regression analysis."

Paragraph 5.1.1.2.8. (former), renumber as paragraph 5.1.1.2.11.
Paragraphs 5.1.2.2.5. to 5.1.2.2.7., amend to read:
"5.1.2.2.5. Carry out the operations specified in paragraph 5.1.1.2. of this appendix (with the exception of paragraph 5.1.1.2.4. of this appendix), replacing M by I in the formula set out in paragraph 5.1.1.2.7. of this appendix.
5.1.2.2.6. Adjust the brake to reproduce the corrected power (paragraph 5.1.1.2.11. of this appendix) and to take into account the difference between the vehicle mass (M) on the track and the equivalent inertia test mass (I) to be used. This may be done by calculating the mean corrected road coast down time from $\mathrm{V}_{2}$ to $\mathrm{V}_{1}$ and reproducing the same time on the dynamometer by the following relationship:

$$
\mathrm{T}_{\text {corrected }}=\frac{\mathrm{T}_{\text {measured }}}{K} \cdot \frac{\mathbf{I}}{\mathbf{M}}
$$

$\mathrm{K}=$ value specified in paragraph 5.1.1.2.11. above.
5.1.2.2.7. The power $\mathrm{P}_{\mathrm{a}}$ to be absorbed by the dynamometer shall be determined in order to enable the same power (paragraph 5.1.1.2.11. of this appendix) to be reproduced for the same vehicle on different days."

Paragraph 5.2.1.2.7., amend to read:
"5.2.1.2.7. The average torque $\mathrm{C}_{\mathrm{T}}$ determined on the track shall be corrected to the reference ambient conditions as follows:
$\mathrm{C}_{\text {Tcorrected }}=\mathrm{K} \cdot \mathrm{C}_{\text {Tmeasured }}$
Where K has the value specified in paragraph 5.1.1.2.11. of this appendix."

[^0]:    * In accordance with the programme of work of the Inland Transport Committee for 2016-2017 (ECE/TRANS/254, para. 159 and ECE/TRANS/2016/28/Add.1, cluster 3.1), the World Forum will develop, harmonize and update Regulations in order to enhance the performance of vehicles. The present document is submitted in conformity with that mandate.
