Government Data Challenges - Just a Few of Them -

Ensuring, while preventing fraud

- A unique legal identity for all citizens and legal persons
- Protection of data privacy of citizens and legal persons
- Access by qualified citizens and legal persons to services (education, health insurance, etc.) and settlements (VAT refunds)
- Coordination between government agencies
- Legal procurement (according to the rules for dates, identities of parties, changes (or not) in bids made, etc.)
- Verification of certificates and licences (for trade, regulatory requirements, education, etc.)

Government Data Challenges - Just a Few of Them -

Ensuring, while preventing fraud

- The transparent registration of assets and their ownership (in particular land and government bonds)
- Honest voting (Once! And maybe eRemotely) in general elections and also inside of parliaments and their committees as well as within boards of directors of state (and private) enterprises
- Coordination between government departments
- Management of electrical grids (maxi and mini)

Meeting Government Data Challenges With Blockchain
