REQUIREMENTS SPECIFICATION MAPPING (RSM)

Business Domain: Cross Industry – Supply Chain

Business Process: Remittance Advice

Title: Cross Industry Remittance Advice

UN/CEFACT International Trade and Business Processes Group: TBG1

Version: 1.06.00

Release: 1

Document Summary

Document Item	Current Value
Document Title	Requirements Specification Mapping Cross Industry Remittance Advice
Date Last Modified	26-Jan-2011
Current Document Version	1.06.00
Status	Draft
Document Description (one sentence summary)	Specification that describes the data model and targeted technology solutions for the Remittance Advice.

Log of Changes

Issue No.	Date of Change	Changed By	Summary of Change
1.00.00	26-Oct-2010	TBG1	Provided the RSM in the format as required by ICG.
1.01	29-Oct-10	TBG1	Updated diagrams and Qdts
1.02	05-Nov-2010	TBG1	Added new common Library to Section 11
1.03	4-Dec-10	TBG1	Changed Diagrams, added section 3 for Common RSM
1.04	15-Dec-10	TBG1	Updated embedded Common RSM
1.05	31-Dec-10	TBG1	Updated diagram 6.2.1. Added diagrams for Line Item and Trade Settlement. Added notes in section 6.2 on embedded Common Classes and XMI documents. Added XMI diagrams to section 11
1.06	26-Jan-11	TBG1	Added Business Message Template to Section and updated XMI files to section 11

1. Preamble

The current practice of the exchange of business documents by means of telecommunications – usually defined as e-Business presents a major opportunity to improve the competitiveness of companies, especially for Small and Medium Enterprises (SME).

The purpose of this document is to define globally consistent Remittance Advice process for worldwide supply chains, using the UN/CEFACT Modelling Methodology (UMM) approach and Unified Modelling Language to describe and detail the business processes and transactions involved.

The structure of this document is based on the structure of the UN/CEFACT Business Requirements Specification (BRS) document reference CEFACT/ICG/005.

2. References

- UN/CEFACT TBG1 Common Supply Chain BRS, Release 1
- UN/CEFACT TBG2 Buy-Ship-Pay (Including UNeDocs) BRS, version 1.0
- UN/CEFACT Modeling Methodology (CEFACT/TMG/N090R10, November 2001)
- OASIS Universal Business Language (UBL), Version 2.0
- UN/EDIFACT – Remittance advice message

3. Objective

The objective of this document is to standardize the Business processes, the Business transactions and the Information entities of the Remittance process used by the industries in the supply chain.

The business process is the detailed description of the way trading partners intend to play their respective roles, establish business relations and share responsibilities to interact efficiently with the support of their respective information systems.

Each Business transaction is realized by an exchange of Business documents (also called messages). The sequences in which these documents are used, composes a particular instance of a scenario and are presented as activity diagrams in the document.

The business documents are composed of Business Information Entities (BIE), which are preferably taken from libraries of reusable business information entities. The contents of the business documents and the Business Information Entities are presented using class diagrams and/or requirement lists.

4.

5. Target technology solutions

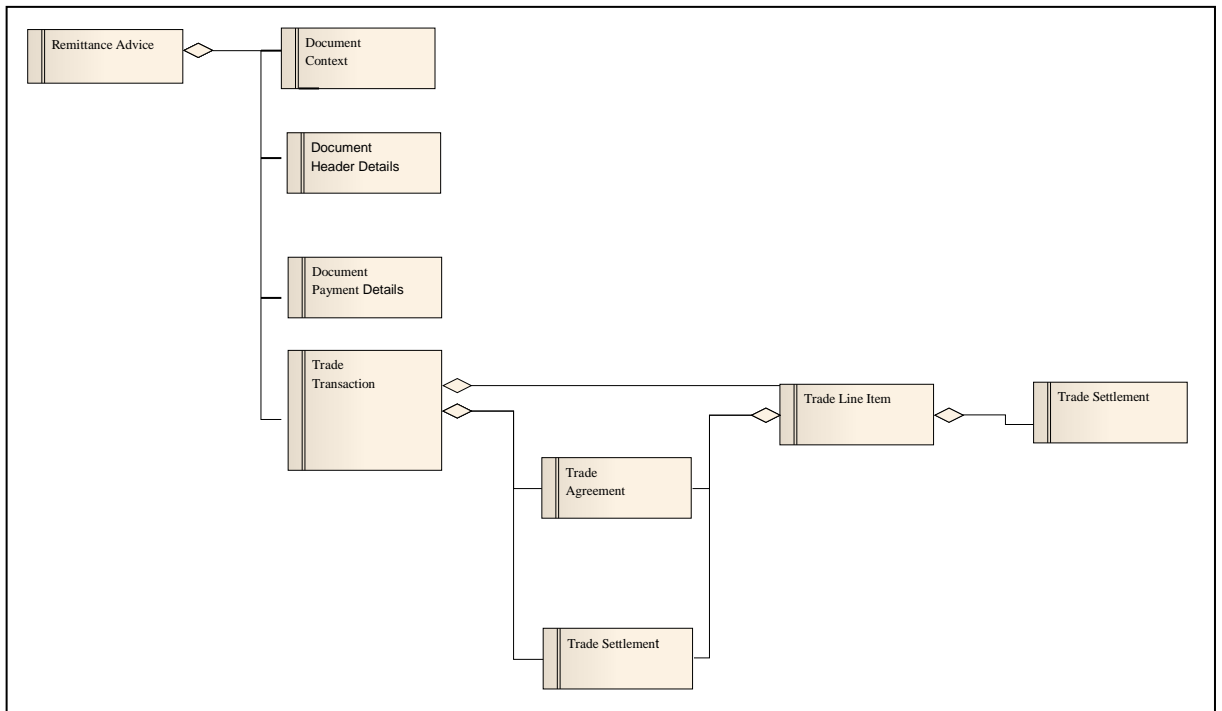

The CIR v1 (Cross Industry Remittance Advice) solution requires a UN/CEFACT XML standard schema.

The CIR v1 (Cross Industry Remittance Advice) solution will not be implemented as a UN/EDIFACT standard message.

6. Information payload to be implemented

6.1. Conceptual Data Model for the Cross Industry Remittance Advice

Figure 5-1 Business message model

Philosophy behind the conceptual design

The conceptual design is based on the assumption that information exchanged in the order-to-pay process tends to have a large degree of similarity. Therefore rather than linking the information to message specific entities two neutral entities have been defined: Trade Agreement and Trade Settlement. These entities contain the main semantic payload for all communication exchanges, on header as well as on line level.

The Trade Transaction and Trade Line Item entities serve to structure the entities mentioned before.

Description of the main entities

- Document Context: Application processing information for the business document.
- Document Heading: Generic document heading information such as Remittance advice number, Issue date.
- Trade Transaction: Information on the trade transaction(s) to which the Remittance advice applies.

- Trade Line Item: Information on the line items that are being shipped..
- Trade Agreement: information on the commercial agreement on which the trade transaction or line is based.
- Trade Settlement: information on the financial settlement of the trade transaction or line.

6.2. Canonical Data Model for the Remittance Advice

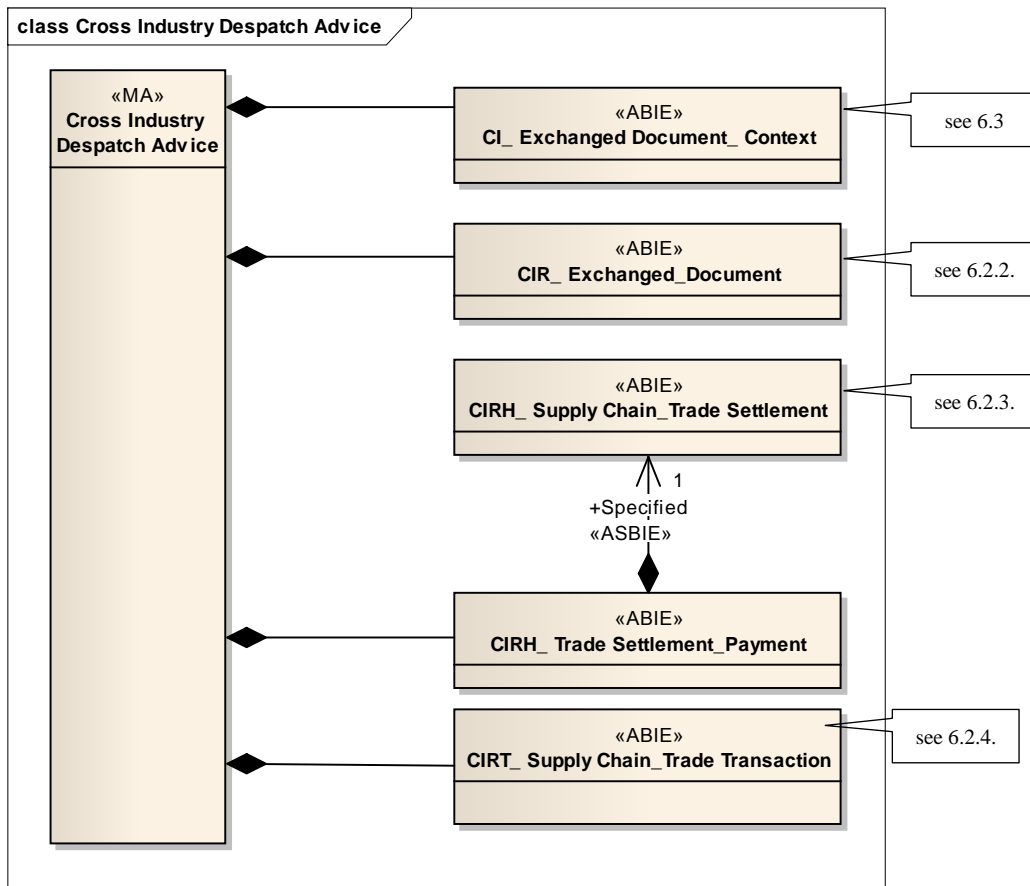

For readability reasons the canonical model is provided in multiple diagrams, each providing a full description of a segment in the Cross Industry Remittance Advice.

 **Note:** The two entities Trade Agreement and Trade Settlement have been depicted as identical on header and line level, since these entities are meant to support the entire Order-to-Pay process. In the individual steps of the process further refinements can be made on what is communicated on header and line level. Therefore in the canonical model for the Remittance Advice message the two conceptual entities are realized as 4 message specific entities, two for the header and two for the line.

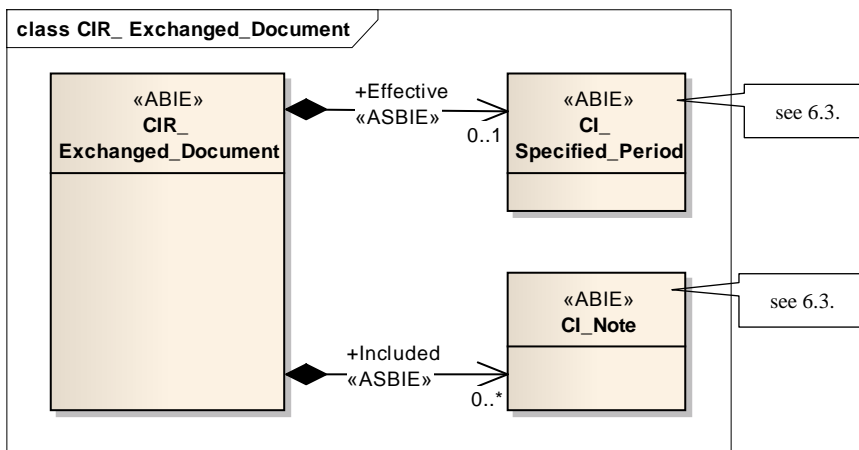

Note: The Common Supply Chain Classes – section 6.3 promotes interoperability across Supply Chain Messages. It also provides easier maintenance / reduces errors and therefore diagrams in section 6.2 only point to the entities in the common classes. The detail of how the entities relate to each other is contained only in the embedded document in section 6.3. and therefore you should refer to this document for all relationships between common entities.

Note: XMI documents that comply with the XMI standard version 2.1 are embedded in section 11. These documents will allow you to upload the diagrams into many diagramming / code generation applications.

8. Core components UN/CEFACT Registry version used

The CIR v1 model described in this document and submitted by the Trade and Business Process Group for Supply Chain, TBG1, has been harmonized with models and submissions of other Trade and Business Process Groups. It re-uses core components extensively. Therefore this document is based on the draft UN/CEFACT Core Component Library CCL010A,

9. Draft Core Component reference

All the new (draft) Core Components, Business Information Entities, and Qualified Data Types that have been used in this RSM have been submitted for registration in the UN/CEFACT Registry version 10A.

10. Additional documentation

This section identifies any additional documentation that will be registered with the canonical model in respect to the BCCs or ACCs that have been provided for registration in the UN/CEFACT Registry.

Not applicable at this point in time.
