Stakeholders for Resource Classification

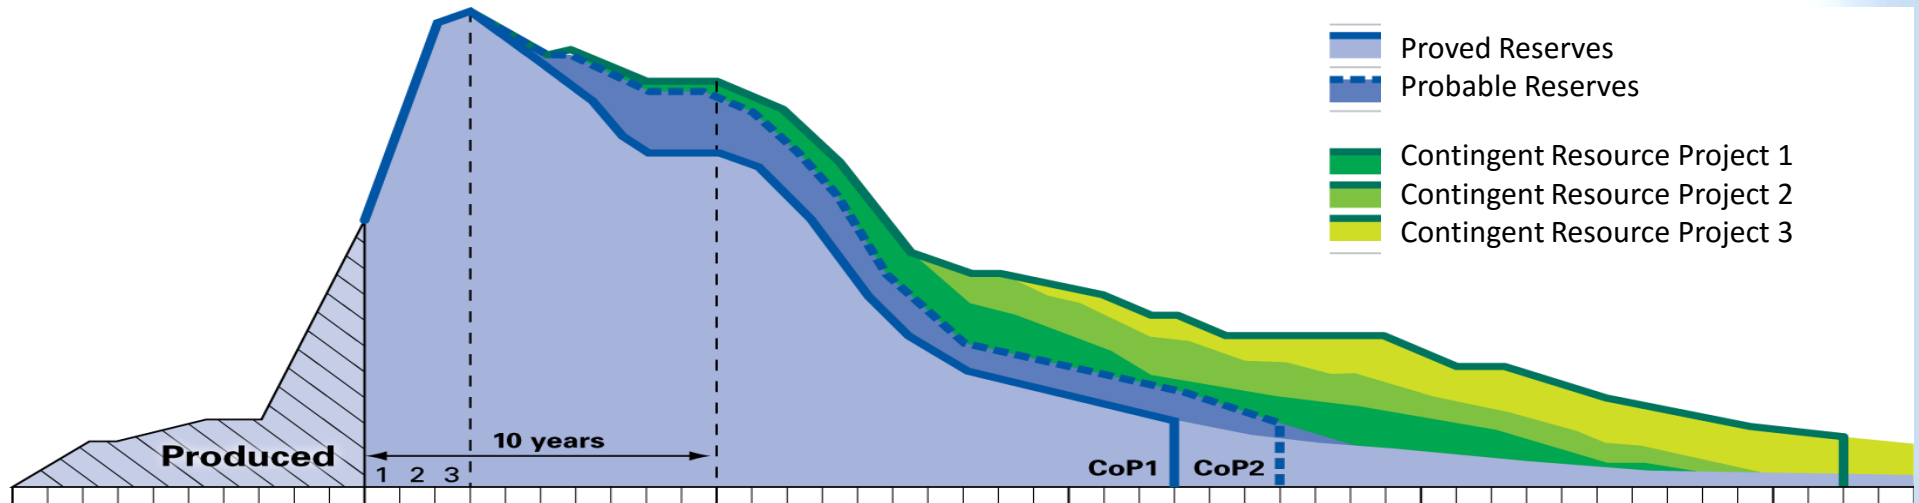

Role of Technology

The improvement of hydrocarbon recovery and investment efficiency is demonstrably linked with advances in technology.

The right linkage between depletion and technology plans is vital to maximising value from our assets.

The Depletion Plan & Business Planning

Activity Plan

Focuses on production of proved and probable reserves and timely execution of activity to complete future projects, such as water and/or gas injection

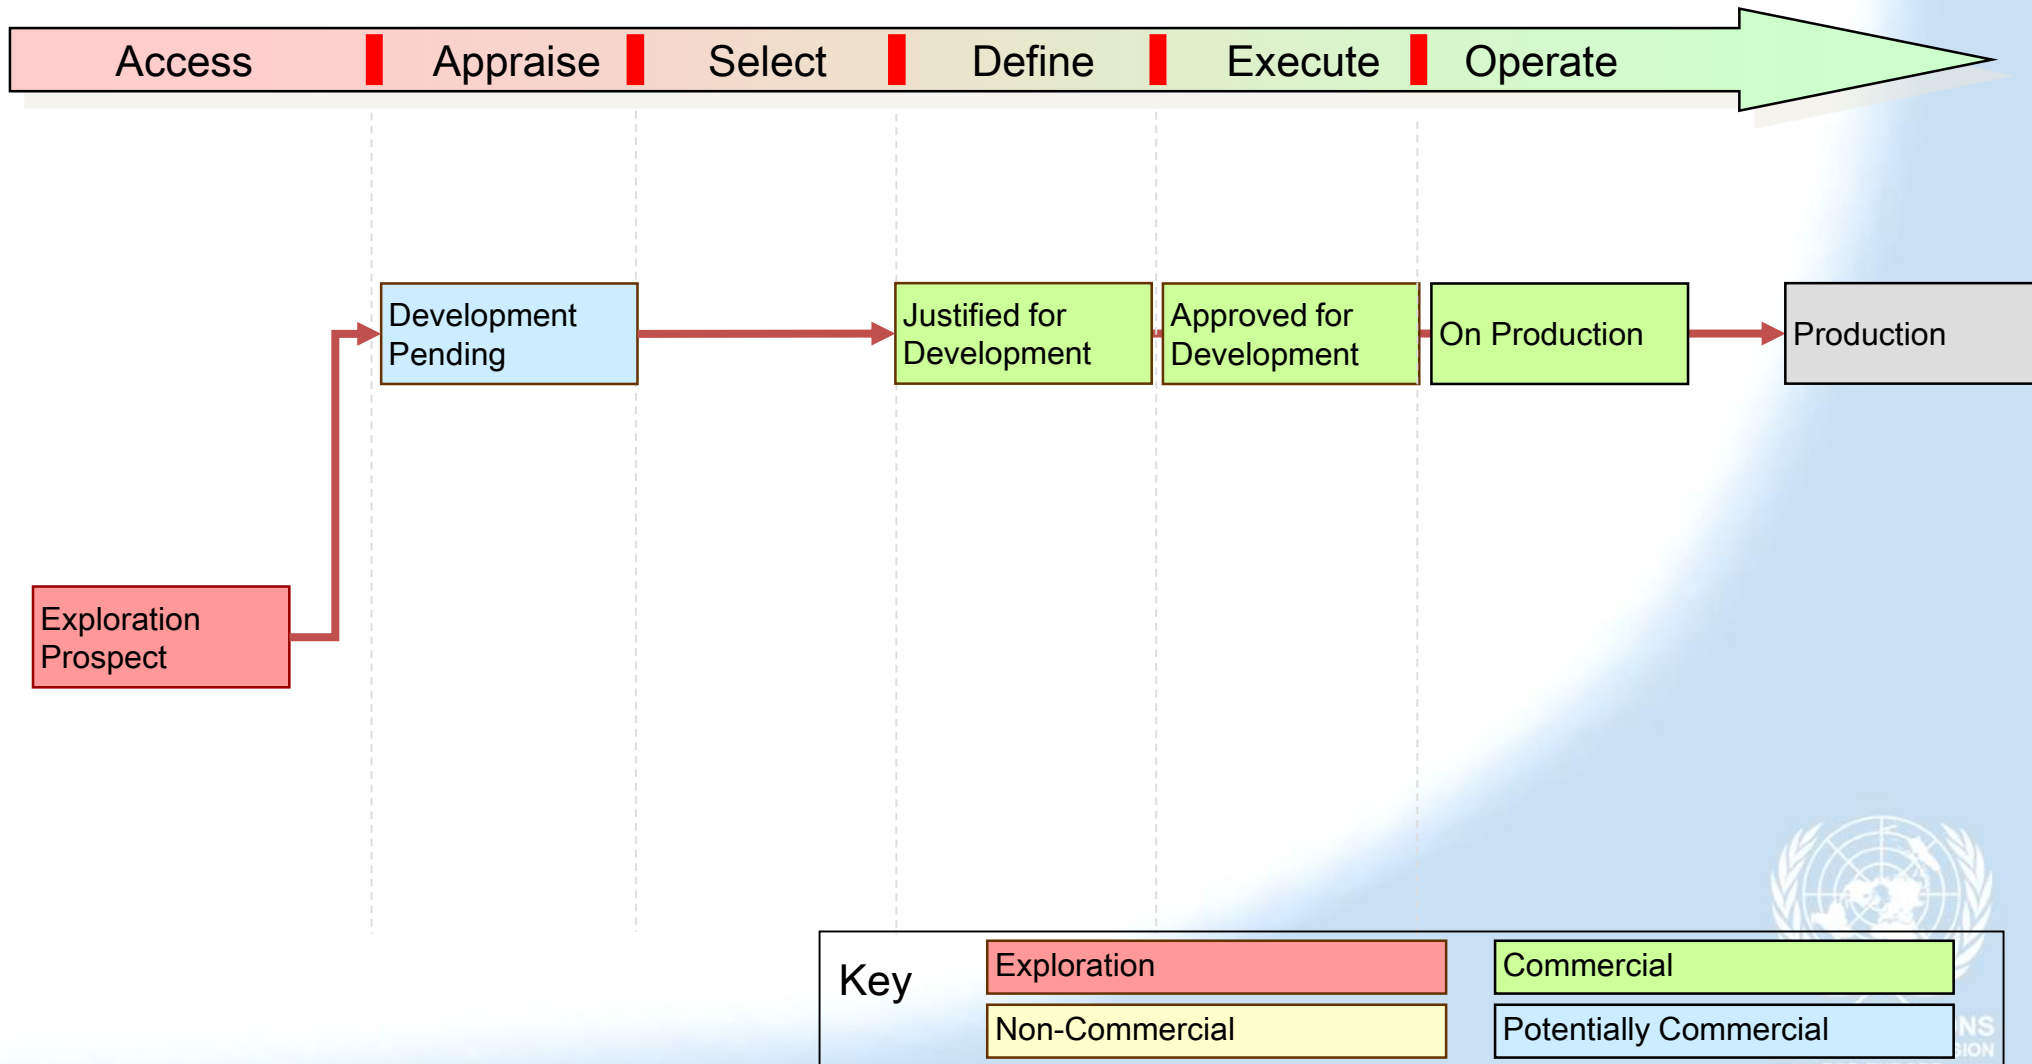

Business Plan

Focuses on the medium to long term value of the Asset but is constrained by assumptions regarding corporate strategy and investment availability.

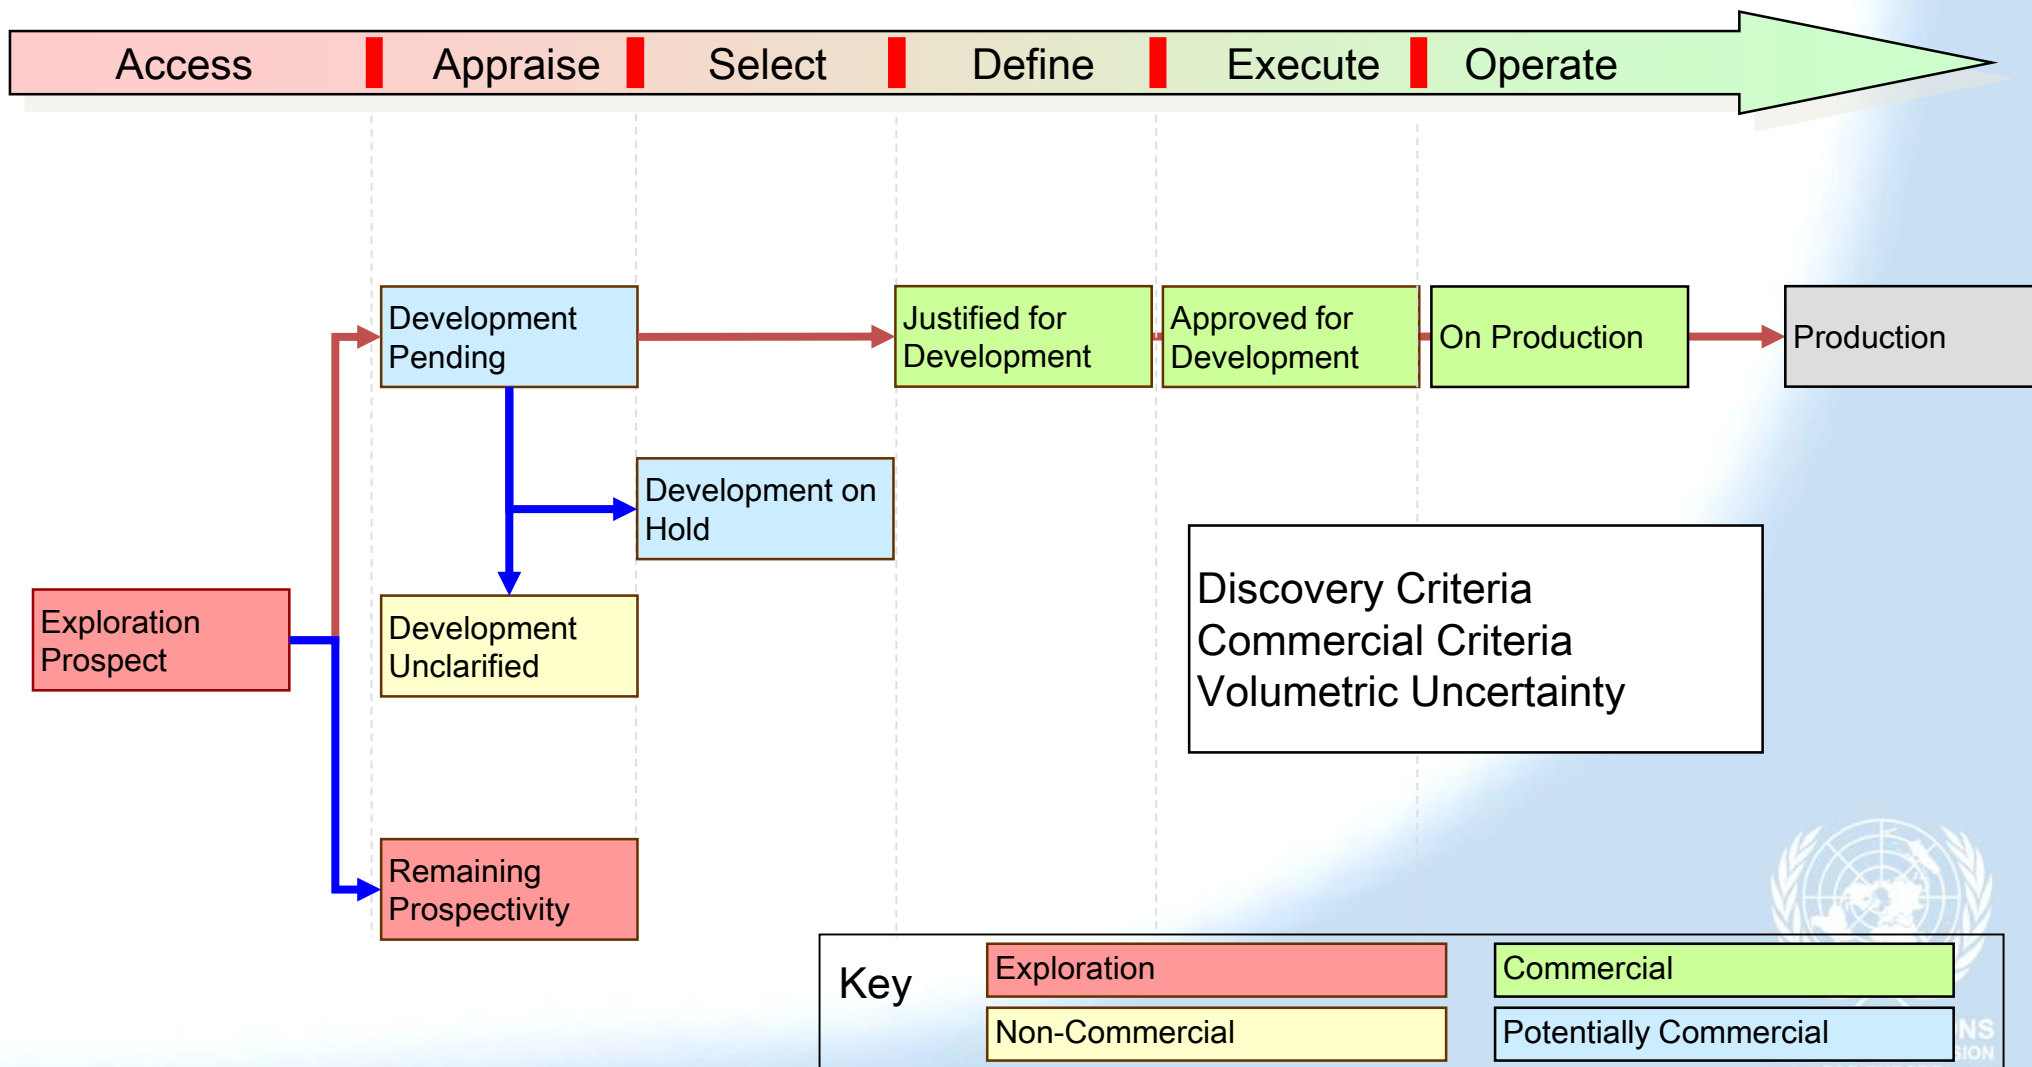

Depletion Plan

Describes the total resource envelope including the proved and probable reserves and Contingent Resources up to the estimated ultimate recovery or technical limit.

Resource Progression

Resource Progression

Diversity in stakeholder characteristics

- Ability to tailor reporting information
 - Range of information available- financial statements or beyond?
- Level of sophistication
 - Sophisticated users
 - » Industry specialists
 - » Use of information as inputs to own analysis using own assumptions
 - » Use of full range of value relevant information
 - Less sophisticated users
 - » Greater reliance on financial statements
- Conflicts between stakeholders?
 - Views on cost/ benefit of information
- View of what is useful information
- Is there one 'answer' that meets the needs of all users?
