Armenia has been making significant progress in establishing SEIS, through the implementation of the SEIS principles and the three pillars: Content, Infrastructure and Cooperation. Armenia participates actively in the work of the United Nations Economic Commission for Europe (UNECE) Working Group on Environmental Monitoring and Assessment (WGEMA), and the UNECE Joint Task Force (JTF) on Environmental Statistics and Indicators, which support countries in Europe and Central Asia towards establishing SEIS by 2021. The present document provides an overview of the state of implementation of SEIS in Armenia and offers recommendations on how to fully achieve the SEIS 2021 target.

KEY MESSAGES

Content
- Armenia has been making considerable progress in making UNECE environmental indicators publicly available and accessible
- 42 out of 49 (including 7 placeholders) UNECE environmental indicators are available in 2018

Infrastructure
- A common national platform was established to facilitate accessibility to environmental information
- A dedicated section on SDGs indicators is available on the website of the Statistical Committee
- A pilot project on SEIS establishment for Lake Sevan was initiated: Water Resources Indicators are implemented within the frame of the ENPI-SEIS project

Cooperation
- Armenia shows a good level of cooperation between national stakeholders
- Armenia participates actively in the UNECE indicator-related processes and the SEIS projects supported by the European Union (EU) and the European Environment Agency (EEA)
- A letter of Intent on political commitments to environmental information between the EEA, the Statistic Committee (SC) and the Ministry of Nature Protection (MNP) was signed under the scope of the ENI-SEIS EAST II project

THE SEVEN SEIS PRINCIPLES AND THEIR STATE OF APPLICATION IN ARMENIA

According to the SEIS principles, information should be:
- Managed as close as possible to its source
- Collected once and shared with others for many purposes
- Readily available to easily fulfill reporting obligations
- Easily accessible to all users
- Accessible to enable comparisons at the appropriate geographical scale and citizen participation
- Fully available to the general public at the national level in the relevant national language(s)
- Supported through common free open software standards

1 The ENPI-SEIS project – Projects “Towards a Shared Environmental Information System in the European Neighborhood”.
2 The ENI-SEIS - Project “Implementation of the principles and practices of the shared environmental information system (SEIS) in the Eastern Partnership countries”.
4 Evaluation is based on experts’ opinion; possible changes or clarifications may be made after discussions with Armenia’s counterparts.
MANAGEMENT OF ENVIRONMENTAL INFORMATION – OVERVIEW

Organizations responsible for collecting, producing, managing and sharing environmental data and information

- The Ministry of Nature Protection
- The Statistical Committee
- The Ministry of Emergency Situations, State Hydrometeorological and Monitoring Service
- The Ministry of Agriculture, Land Use and Melioration Department
- The Ministry of energy infrastructures and natural resources of the Republic of Armenia, Water Committee
- The Ministry of Energy Infrastructures and Natural Resources, Renewable Energy Department
- The Ministry of Health, National Centre of Disease Control and Prevention
- The Ministry of Urban Development, Urban Development Policy and Spatial Planning Department
- Academia, NGOs

Accessibility and availability of environmental information, data and indicators

WHERE?: On the Statistical Committee and Ministry of Nature Protection websites, websites of Conventions
In SoER, the Statistical Yearbook (environment) and monthly bulletins, thematic reports
In implementation reports to MEAs (UNFCCC, UNCCD, UNCBD, BRS, Minamata etc.)

IN WHAT FORMATS?: Reports (e.g. SoER), additional information provided, metadata provided, visuals (tables, graphs, maps, diagrams)

IN WHICH LANGUAGES?: Armenian, English

Environmental indicators in use

- UNECE environmental indicators (42 indicators)
- SDGs (there is a potential to use)
- OECD Green Growth indicators (there is a potential to use)
- Reports to MEAs

CONTENT AND INFRASTRUCTURE FROM INDICATOR PRODUCTION TO USE

STATE OF PRODUCTION AND SHARING OF ENVIRONMENTAL INDICATORS

Out of the 49 UNECE environmental indicators, 23 were selected for detailed assessment as part of a 2017-2018 UNECE study on the state of production, sharing and use of UNECE environmental indicators in the EU Eastern Partnership countries\(^5\). Other 26 indicators were covered in less detail and with less rigorous assessment criteria.

23 assessed UNECE environmental indicators in Armenia (2018):
- 16 indicators indicated the responsible authority for indicator production;
- 21 indicators included the time of update;
- 6 indicators contained reference to their conformity with international standards;
- 21 indicators included visual representations.

\(^5\) The EU-funded project supports production and regular update of the regional set of indicators and strengthening environmental statistics and accounting in the six Eastern Partnership countries under the ENI SEIS East II project.
The three SEIS pillars.

25 questions

It relates to the Clarity criterion of the revised SEIS Assessment Framework

It relates to the Accessibility criterion of the revised SEIS Assessment Framework

It relates to the Clarity and the Comparability criteria of the revised SEIS Assessment Framework

It relates to the Clarity criterion of the revised SEIS Assessment Framework

QUALITY OF SEVEN DATA FLOWS BASED ON ARMENIA’S SELF-ASSESSMENT (2018)

Armenia has conducted a self-assessment of 7 data flows underpinning the 3 UNECE indicators selected for the SEIS mid-term review. The mid-term review was based on the SEIS Assessment Framework and a questionnaire including 25 questions on quality, in accordance with the quality criteria used by the UNECE Statistical Division and the EEA, and the three SEIS pillars.
Atmospheric air: The concentrations of SO\textsubscript{2} and NO\textsubscript{2} were regularly measured in 3 cities (Yerevan, Vanadzor, Alaverdi: 3 locations in each city); the concentration of ground-level ozone was measured only in Yerevan. Graphs and diagrams visually represent the degree of air pollution in these cities. **Areas to improve:** No data on PM\textsubscript{10} concentration is available. There is no reference to measurement methods and their conformity with international standards.

Water: Data characterizes the annual average, the maximum and minimum BODs (biochemical oxygen demand) and the concentration of NH\textsubscript{4} in five rivers. The full series of observation – 1990, 1995, 2000–2016 – exists for two rivers (the Debed and the Razdan). For other rivers, the timeframes were different, although regular measurements started in 2006 for each basin. The data is presented in graphs and diagrams, demonstrating the change of the annual average, the maximum and minimum values of BOD\textsubscript{5} and NH\textsubscript{4} concentration in each river and at each sampling location. **Areas to improve:** There is information on some samples taken within a year and sampling locations, but no information relating to the hydrological periods and sampling dates. There is no reference to measurement methodology not its conformity with international standards.

Biodiversity: The data sets for 1990, 1995 and 2000–2016 include data on the total territory of protected areas, their share in the total country area, as well as information on areas of different IUCN categories (wilderness, national parks, national monuments, special reserves). Data is presented in graphs and diagrams, showing the total and per-category area change.

The information published on the website is available in both Armenian and English. The website refers to the organization responsible for generating the information – the Statistical Committee of the Republic of Armenia. It also indicates the latest update of the content – 06.09.2017.

**Summary of self-assessment**
Concerning the 7 self-ranked data flows underpinning 3 environmental indicators, Armenia has reported on long-time series of continuous monitoring: since 1977 up to present time, with interruptions in 1990–1999 due to the lack of funding. Except for protected areas, the Ministry receives primary data for the underpinning data sets from the organizations responsible for their production. The country reported the availability of metadata for the collected data sets, including information relating to data sources, temporal and spatial coverage. With the exception of protected areas, data is released on a monthly basis. User feedback is used to assess data quality and its dissemination.

Armenia ranked its performances at **96.43%** - a very good performance. (Considering the fact that dust rather than PM\textsubscript{10} is measured in urban air and that there is no data available online for 2017, this score appears to be overestimated).
USE OF ENVIRONMENTAL INDICATORS

Use of environmental indicators in environmental assessments, state of environmental reports and other thematic environmental reports or statistical bulletins

Armenia does not produce any indicator-based environmental report. At the same time, the UNECE environmental indicators are progressively used in visual materials (time-series graphics, tables, maps) in national documents such as the 2011 Armenia Ministerial Report\(^\text{11}\), the 2017 National Statistical Yearbook on National Resources and Environment\(^\text{12}\), the 2016 Environmental statistics of Armenia for 2016 and the time-series of indicators for 2012-2016, and other thematic reports.

Use of environmental indicators for reporting on international obligations under MEAs

One of the SEIS principles stipulates that environmental information and indicators should be readily available to easily fulfill reporting obligations, including under MEAs. UNECE environmental indicators are used for country reports under UNFCCC\(^\text{13}\), UNCBD\(^\text{14}\), UNCCD\(^\text{15}\) and the Protocol on Water and Health under the Water Convention\(^\text{16}\) in different formats and to various extents. The indicators are also, to a smaller extent, used for reporting on three BRS Conventions\(^\text{17}\) and the Minamata Convention.\(^\text{18}\)

Use of environmental indicators for reporting on the Sustainable Development Goals (SDGs) and Green Growth

Armenia undertakes specific activities for the analysis and selection of national indicators. It also produces indicators for each of the SDGs and publishes selected indicators on the website of the Statistical Committee – Armenia SDG indicators (with data annex). Several indicators correspond to the OECD Green Growth indicators.

\(^{11}\) Armenia Ministerial Report (2011, in English and in Armenian) for 2007-2011. For an overview of overall user perspectives on SoER, its role and impact on the country’s environmental policy, see the 2017 report “Effectiveness and relevance of recent environmental assessments for policymaking and public information in the Republic of Armenia” (in English and in Armenian). Thematic reports produced in Armenia (http://www.mnp.am/en/pages/149) (reports on air, climate change, water, biodiversity, sustainable development) cover a number of UNECE environmental indicators.

\(^{12}\) 2017 National Statistical Yearbook on National Resources and Environment provides data that correspond to UNECE environmental indicators.

\(^{13}\) Another important statistical report is the – Environmental statistics of Armenia for 2016 and time-series of indicators for 2012-2016.

\(^{16}\) Third National Report on implementation of the United Nations Convention to Combat Desertification in Armenia (2006, in English). Indicators are mainly linked to the Aichi biodiversity targets.

\(^{17}\) The Convention on the Protection and Use of Transboundary Watercourses and International Lakes (Water Convention).

\(^{18}\) Armenia submitted an Electronic Reporting System of the Basel convention (2016); information about strictly controlled chemicals and import responses under the Rotterdam and two online rounds of reporting in 2007 and 2010 under the Stockholm conventions.

\(^{18}\) International projects under the Minamata convention in Armenia.
The potential use of UNECE indicators for SDGs monitoring in Armenia

**Water:** C10*, C11, C16, C2 (full); C3, C5, C7 (partial); C4, C9 (limited)
**Air:** A1 (partial)

**Energy:** G2 (full); G4 (partial); G3 (limited)
**Air:** A1, A2 (partial); **Land:** E1 (partial); E2 (limited); **Waste:** I3, I4 (limited)

**Air:** A3 (partial); **Water:** C2 (full), C3 (partial); **Biodiversity:** D3 (full);
**Agriculture:** F2, F4 (full); **Waste:** I1 (full); I2 (partial); I3, I4 (limited)

**Climate change:** B1, B2, B3 (full)
**Water:** C16 (full)

**Biodiversity:** D1, D3, D4 (full); D5 (partial); **Land:** E2 (limited)

---

Linking of 15 UNECE indicators to the OECD Green Growth indicators in Armenia

1. CO₂ productivity (1.1)**
2. Energy productivity (2.1, 2.2, 2.3)
3. Material productivity (non-energy) (3.3, 3.4)
4. Water productivity
5. Freshwater resources
6. Forest resources
7. Land resources:
8. Wildlife resources
9. Environmentally induced health problems
10. Climate change:
11. Water:
12. Biodiversity:
13. Air:
14. Energy:
15. Waste:

** Abbreviation as used in the list of OECD Green Growth Indicators.

Use of indicators in the pan-European volume of GEO-6¹⁹

The 6th Global Environmental Outlook (GEO-6), produced in 2016 by UNEP and UNECE, covers Armenia’s use of environmental indicators in the regional context.

---

Institutional cooperation within the country is well developed and is based on bilateral agreements between crucial organizations that deal with environmental information. The Statistic Committee that collects and disseminates information has good experience in cooperating with all stakeholders. The collection, processing and dissemination of information are conducted within procedures and practices under national legislation.

The ENPI-SEIS project (2010-2015), implemented by the EEA and funded by the EU, was aimed at enhancing the engagement of the countries of the European Neighborhood (including Armenia) towards regional cooperation. It was supposed to improve national capacities to manage and share environmental data and information. The ENPI-SEIS project addressed the three SEIS pillars through enhanced networking with the national capacities on environmental information. A pilot project on SEIS building for Lake Sevan in Armenia: Water Resources and Climate Change indicators (www.seis-sevan.am in Armenian and English) initiated in 2014 also emphasized the importance of national and local cooperation between data holders.

Building on achievements of the above-mentioned project, a four-year EU-funded ENI SEIS II EAST project (2016-2020) aims to support the promotion of environmental protection by strengthening environmental governance. As of 2018, the project implementation in Armenia is underway. The National Focal Point (NFP) from the Statistical Committee is appointed, and the NFP from the Ministry of Nature Protection has already been nominated. A letter of intent on political commitments to environmental information was signed between the EEA, Statistical Committee and Ministry of Nature Protection, however a National Implementation Team is not yet in place. The recruitment of a national SEIS assistant is ongoing.

---

**20 The main achievements and outcomes can be found in the East Region Synthesis report "Building SEIS with the Eastern Neighborhood".**
Armenia has been making significant progress in enhancing the accessibility of UNECE environmental indicators. These are increasingly being published on the websites of national environmental authorities, statistical agencies and open data portals in compliance with UNECE requirements.

Armenia has the potential to achieve the 2021 target on UNECE indicators’ availability, as well as on SEIS implementation.

Armenia has potential to use the UNECE environment indicators to monitor the progress under the SDGs. Some UNECE environmental indicators have linkages to the OECD Green Growth indicators.

There are no indicator-based reports, though SoER, Statistical Yearbook (environment) and thematic reports provide sufficient environmental information and data. The reports should be complemented with analysis and assessments. Documents should include relevant material and case studies and they should be well visualized.

The produced reports are not always available on the website of the Ministry of Nature Resources. Some reports to the MEAs are available on the conventions’ website.

Reporting under the MEAs remains one of Armenia’s main tasks. The use of environmental indicators for different purposes, including reporting under the MEAs, should be promoted and strengthened.

- Continue advancing the production and sharing of environmental indicators in compliance with recommendations of the UNECE WGEMA and the JTF on Environmental Statistics and Indicators;
- Continue methodological work on existing and new environmental indicators to ensure that all UNECE environmental indicators are produced, available and accessible by 2021;
- Maintain cooperation and interaction between environmental information producers in Armenia to achieve full SEIS implementation;
- Maintain one common national platform.

- Assess in detail and/or promote the use of UNECE environmental indicators to monitor SDGs progress;
- Increase the use of indicators for different purposes and monitoring capacity of the progress on achievement of SDGs and Green Economy

- Strengthen communication and the role of the environmental assessments (especially SoER) in policy development and decision-making;
- Improve the analytical parts of the SoER/thematic reports by using indicators (shift from providing environmental information to environmental assessment, visual explanations);
- Prepare indicator-based reports.

- Make sure all produced reports are available on nationally managed websites in the national language and well presented to a broad public.

- Increase usage of the environmental indicators for preparation of the reports under the MEAs.
Abbreviations and Acronyms:
EEA – European Environment Agency
ENI - European Neighborhood Instrument
ENI-SEIS II EAST project – Project “Implementation of the principles and practices of the shared environmental information system (SEIS) in the Eastern Partnership countries”
ENPI-SEIS project – Projects “Towards a Shared Environmental Information System in the European Neighborhood”
EU – European Union
IUCN – International Union for Conservation of Nature
MEA – Multilateral environmental agreement
Minamata – Minamata Convention on Mercury
MNP – Ministry of Nature Protection
NFP – National Focal Point
SEIS – Shared Environmental Information System
SC – Statistical Committee
SoER – State-of-environment report
OECD – Organization for Economic Cooperation and Development
UNFCCC – United Nations Framework Convention on Climate Change
UNCCD – United Nations Convention to Combat Desertification
UNCBD - United Nations Convention on Biological Diversity

About the activity:
Countries of Eastern Europe, Caucasus and Central Asia have long traditions in the field of environmental information, assessment and reporting. At the Seventh Environment for Europe Ministerial Conference (Astana, 2011) the participating ministers decided to establish a regular process of environmental assessment and develop SEIS across the region to keep the pan-European environment under review. The UNECE Working Group on Environmental Monitoring and Assessment and the Joint Task Force on Environmental Statistics and Indicators created a platform for the countries to gradually consolidate the shared vision of how to select, calculate, present and use environmental indicators to communicate the state of the environment, factors and trends. The European Environment Agency is supporting the development of the SEIS in the EU Neighbourhood region.

This activity, funded by the Russian Federation, aims to support the actions under the Environmental Monitoring and Assessment (EMA) Programme, to strengthen national capacities in environmental monitoring and assessment across the region and to enhance the understanding of ECE member States of environmental data sharing and SEIS establishment.

Acknowledgments:
The country profile on the state of SEIS implementation in Armenia for 2018 was prepared by Ms Lesya Nikolayeva, international expert. Editorial work was carried out by Ksenia Nechunaeva, UNECE consultant, and Lavinia Giulia Pomarico, UNECE intern. The UNECE Secretariat provided coordination and overall guidance during the preparation of the country profile. The document was shared with the national counterparts, and presented and discussed during the Twentieth session of the Working Group on Environmental Monitoring and Assessment, 3-4 September 2018 in Geneva, Switzerland.
