

# **Problems and Solutions in Developing PRTR: Experiences of NGOs in the EECCA**

**Elena Vasilyeva  
Information Center  
“Volgograd-Ecopress”**

# European Eco-Forum

- Assistance in promotion of the PRTR Protocol
- Workshops for NGOs
- Cross-sectoral debate
- Design and development of PRTRs at the local and regional levels in Russia and Kazakhstan

# Problems

- Collecting information provided by different agencies on different levels and different enterprises
- Companies reporting do not meet PRTR requirements (reporting on waste is not conducted by the components)
- Potential PRTR reporting “drowning” in the reporting system linked to the creation of e-government

# Problems

- Data collection on pollution from small enterprise and sources related to individuals (individual vehicles, furnace heating of private sector, etc. )
- Data collection on pollution from illegal dumping
- PRTR's language
- Insufficient awareness of PRTR by government staff

# Solutions

- Place a module on PRTRs with free access and without registration
- Include PRTR reporting in the Framework of quarterly reports of enterprises on the self-monitoring
- PRTR needs to be orientated on specific country method (or methods) ( detailed instructions on data collection, evaluation and registration of emissions on substances, reporting form, etc.)

# Solutions

- Include in the register total emissions according to a calculation method (*cumulative pollution from private cars – calculation of emissions for the total volume of fuel sold for less emissions from transport companies, calculation of pollution from fuel combustion in the individual residential areas – bases on volume of coal sales*)
- Maintain a register in three languages (Kazakh, Russian, English) with yearly reporting requirements
- Include PRTR in regular courses and training programs
