Water allocation in transboundary basins:
a global workshop on the status and good practices
Geneva-Switzerland
16-17 Oct. 2017
Contents

- Basin and dam characteristics
- Relevant bilateral Agreements
- Water allocation arrangements and improvements
- Ecological significance
- Joint framework
- Managing challenges
- Conclusions and next steps
Basin and Dam Characteristics

- Riparian countries: Iran-Turkmenistan-Afghanistan
- Mean annual runoff of the basin: 1850 MCM
- Mean annual runoff at the dam site: 970 MCM
- Flow regime: Significant flood and drought Periods
- Dam purposes: Irrigation, urban water supply, and flood control
- Reservoir volume: 1250 MCM

Population Data by Country in the Harirud Basin

<table>

Adopted from the EastWest Institute Report (2010)
Relevant Bilateral Agreements and Improvement of Water Allocation by Dam Construction

- Major stream flow in the spring season
- Existing of 67000 ha. irrigated area in down stream in Iran and Turkmenistan
- Existing of population (more than 3 million at present) in the basin and need for domestic water supply
- Control of huge floods and border land erosion
# Water Allocation arrangements and improvements

Water Uses and Related Facilities

Environmental needs

Domestic and industrial uses

Irrigated Area (IRAN)

Urban water supply pipeline

Shirtapeh Diversion Dam

Doosti Reservoir Dam

Domestic and industrial uses

Irrigated Area (TURKMENISTAN)
Ecological Significance

- There exist protected meadows and forests areas on the margin of the Harirud River in Sarakhs area, which is one of the most diverse ecological regions of Iran. Some of them are:
  - Universal Forest of "Ghare Jangel" on the margin of the river and the border.
  - “Qasem Khani” Forest, the ecological important area with a cover of indigenous grasslands that has been home to thousands of migratory birds from northern Siberia and kinds of wildlife.
  - The River Meadows on both sides of the border in Iran and Turkmenistan.
joint framework since 2000:
Doosti Dam Common Coordinating Commission (DCC)

**Turkmen members**
- Managing director of Turkmen Regional Water Authority
- Deputy of operation and maintenance
- Deputy of surface water
- Turkmen Doosti Dam manager

**Iranian members**
- Managing director of Iranian Regional Water Authority
- Deputy of operation and conservation
- Deputy of surveying
- Iranian Doosti Dam manager
Outstanding Achievements of the DCC

- Providing and implementation of the O&M Manuals for “Doosti Dam” and “Shirtape Diversion Dam”
- Providing and implementation of the “Doosti Dam” common zone pass
- Providing and implementation of common Flow measuring instructions
- Joint measuring and monitoring
- Agreement on operation of the dam facilities
- Resolving technical problems on dam and related facilities
- Decision making for environmental water release (Deciding the amount of 336 MCM)
- More than 100 signed protocols on study, construction and exploitation of Doosti dam and Shirtape diversion dam (by the DCC and related common management committee)
- Direct negotiation and decision making - 31 meetings
Managing Challenges

1 - Special cooperation for managing water consumption in drought years

Cumulative consumption of Turkmenistan and Iran (M.C.M.)

- Turkmenistan
- I.R. Iran
Managing Challenges

2 - Afghanistan dam construction at the upstream (Salma Dam)

✓ Bilateral (Iran & Turkemanistan) official request from Afghanistan to cooperate and determine the trilateral legal regime of this transboundary river, in different political levels (Presidents, Ministers of foreign affairs, …).

✓ Following up the efforts through different approaches such as defining a basket of benefits to encourage Afghanistan for cooperation and setting up trilateral legal regime of water allocation.
Conclusions and Next Steps

- Joint operation of “Doosti Dam” is a bridge of friendship enhancement after a century which is successfully on progress.

- The coordinating commission consist of local members with an international manifest is a key element of such success.

- Joint operation of this project has yielded a framework for extension of cooperation and friendship between the countries concerned.

- An appropriate platform for cooperation and management of this transboundary river is necessary, and should be developed between the three involved countries.

- By using relevant international efforts such as existing water allocation treaties in similar basins as well as the 1997 UNWC and 1992 UNECE Water Convention, we are trying to provide opportunities for arranging trilateral legal regime of water sharing in this transboundary basin.
THANK YOU FOR YOUR ATTENTION
