Dear Minister,

With reference to your letters dated 3rd and 8 October, manifesting your interest in participate in the environmental impact assessment procedure of an Individualized Temporary Storage facility (ATI) of spent fuel in Almaraz Nuclear Power Plant, we would like firstly to express that the Spanish Government fully shares the interest to ensure the population safety and the environmental protection at any moment, as well as to cooperate closely with Portuguese Authorities all along the process.

Accordingly, as you are aware, a direct communication has been adopted between both administrations, in both technical and institutional level, through the Spain Ambassador, to guarantee that Portuguese Authorities will be promptly and transparently informed about the process.

Additionally, we would like to translate the confidence in the procedure that has been carried out in strict accordance with the normative, and the principles arising from our commitment within the European Union and the IAEA.

In this context, we consider that the bilateral cooperation agreement on nuclear border facilitate safety signed between Spain and Portugal, in Lisbon, on the 31st March of 1980, is a valuable instrument for cooperation between both countries.

The provisions of that agreement establishes, inter alia, the criteria for distance to characterize the border nuclear facilities. These provisions have been strictly applied in the authorization dossier of the ATI.

It's worth recalling that Spanish nuclear power plants meet all the conditions established by the Nuclear Safety Council, the independent body and the competent authority to supervise the operation conditions, safety and radiological protection in nuclear power plants in Spain. In this regard, we would like to point out that this Organism has verify that the design of the container model complies with all required safety conditions.
Regarding the authorization procedure of the ATI Almaraz, we kindly inform that it started in August 2015, on request of the holder, as a temporary spent fuel storage within the nuclear power plan plot.

This ATI, is basically, a reinforced concrete floor of 51 by 20 m², and one meter thick, below ground level, with a perimeter wall 5 meters high. It has capacity for 20 containers. It is similar to ATIs in others nuclear power plants, like Jose Cabrera NPP, Asco I NPP or Asco II NPP:

The environmental impact assessment procedure of this ATI has been conducted in accordance with the Spanish environmental impact assessment law (Law 21/2013, 13 of December 2013) and the Directive 2011/92/UE. The Spanish Minister for Agriculture, Fisheries, Food and Environment has evaluated the possibility of any significant transboundary environmental effects in Portuguese territory, concluding that the project will not have any environmental transboundary impact.

Based on the principle of mutual cooperation, that drives the relations between both countries, and in accordance with the provisions of Directive 2011/92, and the agreement in cooperation established in the Convention on Environmental Impact Assessment in a Transboundary Context (Espoo Convention) and the Protocol between both countries in the environmental impact assessment of projects and plans with transboundary effects, we kindly mail you all relevant documentation and a copy of the decision of the ATI declaration of environmental impact.

Finally, we would like once again to reiterate the firm determination of Spanish Government to continue to inform promptly the Portugal Government about the authorization procedure, and in this respect we have already given instructions to the technical services concerned.

Minister of Energy, Tourism, and Digital Agenda
Álvaro Nadal Belda

Minister of Agriculture, Fisheries, Food and Environment
Isabel García Tejerina
