

Tomorrow needs commitments

Monika Naudužaitė, European Commission

ESPOO nuclear panel: 22 June 2011, Geneva

● How many lessons do we need to put our act together?

- Chernobyl, Fukushima...what is next?
- The double face of disasters: nature made and / or human mistakes

International Treaties and Conventions : paper law or really effective instruments?

Choice of relevant instruments is huge, but what about implementation?

???

Wish versus reality

Ferocious, but...only barking!

● Euratom Treaty: a perspective example

- Friendly to the environment: air, water, soil
- Legislative basis:
 - » Health and safety
 - » Investments
 - » International agreements
- Treaty in application: from implementation to monitoring
- Further initiatives

● How can young ESPOO learn from old Euratom?

- Realistic and binding provisions
- Well defined procedures
- Monitoring structure
- Sanctions when obligations not respected
- And most of all strong will and commitment!
