Saltsjöbaden III –
a workshop on Air pollution and its relations to
climate change and sustainable development –
linking immediate needs with long term challenges
Main conclusions

• Important to link AP and CC (scientific and policy).

• Take CC into account in the revision of the NECD & Gtb prot.- goalsetting.

• Look beyond 2020.

• Integrate the CC and AP communities with respect to research, monitoring and modelling.

• Models/tools: carefully balance complexity vs benefits.
Conclusions cont.

• Need for common databases and improvement of databases on costs for AP and CC.

• better integration of NTM in assessments.

• work on emerging technologies.

• Need to improve our understanding of socio-economic aspects. New group?

• Need for an improved scientific basis associated with health effects. Continued work with WHO.
Conclusions Cont.

- Need for integrated Nitrogen approaches and policy options. Leading role for CLRTAP? Expert group?

- Need for strengthening the policy development for shipping. EU and/or US should take unilateral/bilateral action.

- Closer involvement of EECCA countries. Revised action plan needed.

- Create a co-operation platform with other regions. (Not open up the Convention)
