
The way after Quito

Funding notions for the financing of UN's Habitat *New Urban Agenda* based on the collaborative resourcing proposed for the U4SSC WG1 *Future Living Framework*

Dr Lluisa Marsal. International consultant on Smart sustainable cities
Advisor on innovation on standards, urban policies, planning & regulations

Sponsored by Future Cities Catapult

International planning practices such as the *UN Habitat 2015 Guidelines on Urban and Territorial Planning* assist on the development and redevelopment of human settlements

Universal policies such as the *UN Habitat New Urban Agenda* are essential to protect cities and communities from the negative effects of globalisation

World-class standards such as the *WTO Agreement on Technical Barriers to Trade* promote free trading of services and goods while safeguarding local economic capabilities and indigenous skills

Global regulations such as the *WTO General Agreements (e.g) on Trade in Services, IT, etc.* prevent multinational economic conflicts and advocate fair competitiveness

And, as wisely identified by the **U4SSC initiative**:

: **Planning, policies, standards & regulations** would benefit from operating together in a single Framework (WG1), including the measurement of its performance through KPI. Moreover, a unique Framework will better support dedicated actions (WG2 & WG3)

WG1's proposed **Future Living Framework** provides that single structure to harmonise and integrate **policies, planning, standards and regulations**:

And, it will also enable and support dedicated actions to **connect cities and communities** (WG2) while **enhancing innovation and participation** (WG3)

However,

International planning practices

Universal policies

World standards

Global regulations

currently fail in their implementation and uptake. This is not due to the lack of a Framework for integration and harmonisation but to their excessive top-down approach which does not sufficiently include the end user as part of the model. The **Future Living Framework will address this leveraging on its integrative and harmonising capabilities.**

And,

Digital technologies

will facilitate this bottom-up user-inclusive model –named as “*collaboratory*” in which integration and harmonisation capabilities of the **Future Living Framework** are based.

This *collaboratory* has been successfully tested separately in the implementation and uptake of [plans and projects](#), [policies and regulations](#), and [standards](#).

The challenge for the **Future Living Framework** will be to **include the *collaboratory* for an integrated and harmonised uptake, and implementation of planning, policies, standards and regulations.**

Importantly,

Funding and financing

are an essential element of the implementation and uptake and therefore part of the “*collaboratory*” model. In the “*collaboratory*”, **funding and financing is conceived as a digitalised and most distributed version of the traditional PPPs (Public-Private-People-Partnerships)**

In the funding and financing of the implementation and uptake of the Future Living Framework through the “*collaboratory*” model (but also the NUA and SDGs), the **financial sector and economic stakeholders (“S” in figure next page)**, will still partner with **cities and public agencies (“D”)**, and with the **non-profit sector and with citizenship in general (“I”)** but under a more distributed and digitalised operational model:

: in which “S”, “D” and “I” are paired according to common interests, being this the base for **harmonisation**

more holistic tested solutions,
providing systemic and
adaptive recommendations

anticipation of requirements
leads to solutions discovery
and new business
opportunities for stakeholders

: and the resulting triangles are
holistically monitored, merged & combined, being this the base for integration

Comments and questions are welcome!

Thanks
