

International Fire Safety Standards Coalition

International Fire Safety Standards Coalition Supporter Declaration Document

As members of the Land, Real Estate, Construction, Infrastructure and related professions we support the goal of increasing public trust by improving consistency and enforcement of fire safety standards internationally. We therefore commit to promote the development and implementation of International Fire Safety Standards and confirm our intention to support the following Objectives:

Objective 1 – Standards

Standards are the foundation of professionalism. We support the creation, maintenance, adoption and use of high quality, international and principle-based fire safety standards through a transparent and inclusive standard setting process.

Objective 2 – Implementation

Following the creation of the International Fire Safety Standards (IFSS) we are committed, for as long as we are supporters of the Coalition, to promote the effective implementation of these standards and encourage world markets to accept and adopt IFSS as the framework for our global professions.
