

*UNECE Green Economy Seminar*

**Building the cities we want**

27 November 2012, 10:00-18:00

Room VIII, A-Building, 3<sup>rd</sup> floor, Palais des Nations

Languages: English, Russian and French with simultaneous translation

The Rio+20 UN Sustainable Development Conference outlined the importance of a “*holistic approach to urban development and human settlements [and] an integrated approach to planning and building sustainable cities and urban settlements*”. Sustainable urban development cannot be achieved by an individual sector alone. In contrast: to be successful, it requires interlinkages and synergies between sectors and programmes. As the work of UNECE covers all urban sectors, this event provides the opportunity to exchange and identify these interlinkages within UNECE activities.

This UNECE Green Economy seminar will present current and future trends and challenges in European cities. It will provide the platform for a shared discussion on how to respond to these economic, social and environmental challenges in order to achieve sustainable urban development in the wider European region.

The seminar consists of two thematic panels and a final session. During the final session, conclusions and recommendations from the thematic panel discussions will be drawn with the aim to identify potential joint activities for intersectoral cooperation in UNECE on sustainable urban development.

The two thematic panels will focus on:

**I – Energy, transport and technologies in cities**

In increasingly networked societies, innovation in information and communication technology could lead to improved energy efficiency, reduced resource consumption and, overall, better managed urban areas. This panel examines potentials and experiences of so-called smart cities. It also explores the transport and environment related dimension of sustainable urbanization.

**II – Ageing and accessibility in cities**

Looking at current and future demographic trends in the wider European region, this panel will emphasize the changing needs of an ageing society and how this development will impact on housing demand and accessibility of urban infrastructures.

Speakers include experts from governments, academia and private sector as well as staff members of UNECE and its UN partner organizations. The seminar will take place during the UNECE Sustainable Energy Week and back to back with meetings of the UNECE Sustainable Energy Committee.
