The documents for the session will be published in English, French and Russian and will be posted on the UNECE website as soon as they become available, at the following address: <http://www.unece.org/ie/se/com.html>.

### **Item 2: Election of Officers**

ECE/ENERGY/2008/2 – Progress report on UNECE Study on sustainable energy policies to mitigate energy security risks

3. During the Committee on Sustainable Energy's first expert dialogue on energy security held in November 2007, experts noted that the most effective way to manage supply risk and increase global energy security was to invest in technology and infrastructure. Changes in the energy market had given rise to new challenges in meeting these investment requirements. The secretariat background paper on financing energy security concluded that active cooperation between national oil companies (NOCs) and international oil companies (IOCs), together with stable host government policies, could help ensure that the required capital is mobilized in support of hydrocarbon investments. Governments should strive to achieve a fiscal and regulatory environment in which multiple sources of finance are supported. This session of the expert dialogue will first examine the potential impact of strategic alliances between NOCs and IOCs on energy security. Their government officials will then review the complementary nature of energy security strategies in different countries and subregions.
