

CES seminar on the modernisation of statistical production and services and managing for efficiency

Questions for general discussion

Questions for Session I

1. What is your experience in developing statistical production - how much and where we could learn from each other? And secondly, what do you think, to what extent your development work could be used in other countries? Can you see specific reasons why your work is applicable or not applicable by others?
2. In what sense are new tools / organisation models integrated into the statistical business processes?
3. What are **the most prominent gains** realised due to the development/integration of new IT tools / organisation models (especially in terms of resources and interoperability)?
4. To what degree are the problems in standardization and harmonization IT related and to what degree are they challenges related to management and human resources?
