

CES seminar on the modernisation of statistical production and services and managing for efficiency

Questions for general discussion

Questions for Session II

1. How should we organise ourselves to become more service oriented, to focus more on communication?
2. How should statistical products and services evolve to respond to new demands?
3. How to solve the issue of confidentiality in the environment of new dissemination channels and services?
4. What about the label of official statistics? When users pull our data into their applications and integrate them with other datasets - is it important to ensure our visibility and how?
5. What are the key factors for accelerating the shared service idea?
6. What are the key constraints which hinder the development of innovative statistical products and services?
