

UNODC-UNECE
Manual on Victimization Surveys

Version 3.1
September 2008

TABLE OF CONTENT

Part I. Introduction

Ch. I.A. Purpose of the manual

Figure: Crime victimization surveys end to end process

Ch. I.B. Quality assurance

Ch. I.C. History of victim surveys: Evolution and where we are today

Part II. Key issues for policy makers

Ch. II.A. How crime victimization data can be of use to policy makers

Ch. II.B. Limitations of crime victimization surveys

Ch. II.C. Which methodology should I use?

Ch. II.D. Relation between victimization surveys and other types of official crime statistics

About police-reported statistics

Factors related to varying levels of police-reported crime over time and between countries

Why people report offenses to police

Why people choose not to report offenses to the police

Counting rules

About victim survey data

Disclosing victimization in a population survey

Differences between victim surveys and police-reported data

Data sources

Coverage

Unfounded incidents

Sources of error

Table: Differences between police reported data and victim reported surveys in Canada

Comparing victim survey data and police-reported data

References

Ch. II.E. Publication and dissemination

Scope and purpose

Principles

Guidelines

References

Ch. II.F. Elements for international comparability: Draft list of keytopics

Part III. Methodological issues

Ch. III.A. Introduction

Figure: Translating user requirements into survey methodology

Ch. III.B. Goals/objectives/purposes of survey/collection history

Client needs and priorities

Survey goals and objectives

Survey goals

Box: Questions to be answered in developing survey goals

Ch. III.U. Closing the circle evaluating existing surveys

Survey objectives

Box: Survey objective goals

An example of establishing survey goals objectives

Examine client broad and detailed requirements and priorities

Survey goal established

Survey objectives established

Collection history and consideration of other data

Ch. III.C. Budget, time frame and other constraints

Budget

Box: Question 1

Box: Caution

Figure: Figure: Estimated proportion of budget for each survey stage

Timeframe

Other considerations

Ch. III.D. Survey Coverage

Box: The importance of the target population

Ch. III.E. Survey Sample Frames

Figure: The relationship between target population, sampled population and sample frame

Issues to consider

Box: Case study: Sampling using general population telephone Surveys

Sampling minority groups and other special populations

Box: Case study: Surveying minority groups

Coverage error

Other general guidelines on sampling frames

References

Ch. III.F. Sample design

Figure: Sample components

Probability samples

Simple random samples

Systematic random samples

Cluster samples

Stratified random samples

Multistage sampling

Random walk

Non-probability samples

Purposive samples

Snowball samples

Quota sampling

Expert sampling

Heterogeneity sampling

Modal instance sampling

Accidental/Haphazard/Convenience samples

Cross-sectional versus longitudinal designs

Sampling theory

Sample size considerations

Survey goals

Available resources

Sample design

- Desired precision of estimates
- Anticipated response rate
- Anticipated victimization rate
- Length of reference period
- Subpopulation estimates
- Key variable yield
- Anticipated sample loss for panel surveys

- Oversampling

- Sampling unit selection

 - Box: Practices on respondents' selection in past victim surveys

- Addressing survey error associated with sample design

- Summary of guidelines for designing survey samples

- References

Ch. III.G. Respondents

- Procedure for respondent's identification in person/household surveys

- How to count offenses and victims

 - Counting offenses

 - Prevalence versus incidence measures

 - Crime incidents

 - Multiple and repeat victimizations

 - Classifying types of crime

 - Households versus persons

- Minimizing non-response

 - Box: Reasons for refusal

 - The use of introductory letters

 - Box: Introductory letter content

 - Mailing

 - Toll free numbers

 - Contact at the sample unit

 - Managing refusals

- Addressing survey error associated with respondents

 - (No draft currently available)

- Use of proxy respondents

 - Advantages

 - Disadvantages

 - Establishing rules for proxy respondents

 - Establishing criteria for identifying acceptable proxy respondents

 - Conducting interviews with proxy respondents

 - Identifying proxy respondents in survey data

 - Summary

Ch. III.H. Frequency of enumeration

- Irregular surveys

- Periodic surveys

- Annual surveys

- Continuous surveys

- Other frequency considerations

Ch. III.I. Content of the survey

Ch. III.J. Data collection and capture operations

 - Box: Mode of interview for victimization surveys in the 2005 UNECE-UNODC inventory

Ch. III.U. Closing the circle evaluating existing surveys

Survey modes

Face-to-face interviews

Telephone interviews

Box: The Scottish Victimization Survey experience

Self-administered interviews

Internet-based questionnaires

Mixed-mode interviewing

Summary of survey mode advantages and disadvantages

Methods of data capture

Paper and pencil (PAPI)

Computer assisted interviewing (CAI)

Selecting the appropriate mode and method of data capture

Conclusion

Reference

Ch. III.K. Reference period

Definition

Box: Summary: Reference periods

Interview techniques to improve recall

Moving reference periods

Figure: Distribution of reference periods in one financial year of British Crime Survey interviews

Ch. III.L. Questionnaire design

Victimization screener instrument

Box : Example of questions recalling victimization experience

Box : Example of intimate partner violence screener questions

Box : Screening questions used for violence against women

Crime incident instrument

Separate incident form for each crime type

Single incident form for all crime types

Series victimizations

How to formulate questions

Box : Poor and preferable question wording

Box : The Italian violence against women survey

Box : How to survey violence: Do not mention violence

Answer modalities

Closed ended questions

Box: A new response category in the Italian Victimization Survey

Box: How to use information from “*Other, please specify*” in crime classification

Box: Managing a long list of response categories

Open-ended questions

Hierarchical questions

Scaled items

Likert scale

Box: Likert scale example

Box: Example: Likert scale

Building a Likert scale

Advantages and disadvantages scaled items

Box: Instructions to the respondent

Retrospective questions

Sequencing questions

Other considerations

How many questions?

Box: Average survey length

Questions and respondents

Question sensitivity

Proxy responses

Pre-testing questionnaires

The design

Qualitative methodologies

Focus groups

Expert revision

The alternatives test

Cognitive testing

Pre-testing

Graphics and the instrument

Box: Graphic example

Box: Graphic example

Skip patterns

References

Ch. III.M. Interviewing (if not a self response survey)

Interviewers' selection, interviewers' training and training materials

Selecting interviewers and identifying skills/attributes required for interviewers

Continuous training

Aims and planning

Understanding the survey

Properly conducting the interview

Managing the relationship with the respondent

The motivated interviewer

Debriefing

Group discussions

Room assistance

Initial training

Methodologies

Organizational aspects

Developing other interviewer materials

Questionnaire guide

Interviewer's manual

Training structure and content

Example of training modules

Module 1 - Introduction, presentation of the survey and the sponsoring Institute

Module 2 - Organization and methodology of the survey

Module 3 – Contents of the survey: In-scope crimes

Module 4 – Listening and the effective communication

Module 5 – Technical training for computer assisted interviewing

Box: Training of interviewers for the Violence Against Women Survey.

Box: Minority group interviewing

Interviewer's influence on data collection

Box: Old and new question wording

Ch. III.U. Closing the circle evaluating existing surveys

- Training of interviewers: Role-playing
 - Scene 1. A threatening husband
 - Scene 2. An intimidated respondent
 - Scene 3. An undisclosed rape

- Quality control in the process phase

- Quality rates: Telephone surveys

- Table: Final disposition codes

- Table: Response rate formulae

- Table: Important surveying rates

- Monitoring PAPI surveys

- Control Charts

 - Figure: Refusal rate outlier

 - Figure: UNKNOWN TITLE

 - Figure: UNKNOWN TITLE

- Box: Qualitative tools to monitor the survey during the data collection phase

Ch. III.N. Data processing

- Transferring to data files and security issues

- Data checking

- Data editing

Ch. III.O. Data analysis; Estimation and presentation

- Estimation and data weighting

 - Figure: Target Population - Frame - Sample – Estimates

- Data files (No draft currently available)

- Tabular presentation (No draft currently available)

Ch. III.P. Pilot survey

Ch. III.Q. Analysis and interpretation of data quality

- Principles

 - Relevance

 - Accuracy

 - Timeliness

 - Accessibility

 - Interpretability

 - Coherence

- References

Ch. III.R. Language and cultural considerations

- Languages: Will the questionnaire be administered in more than one language?

- Cultural issues/differences

- Box: Survey difficulties and solutions

- References

Ch. III.S. Ethical considerations

- Protecting respondents

 - Informed consent

 - Protecting respondent privacy

 - Respecting cultural norms

 - Avoiding harm to respondents

 - Respecting peoples' rights to not participate in voluntary surveys

 - Balancing confidentiality and laws on reporting crimes

- Ensuring sound professional and scientific process

References

Ch. III.T. Data dissemination and documentation

Dissemination policies

Standards for data dissemination

Dissemination formats

Box: Potential formats for statistical dissemination

Metadata and documentation

Publications and access to the public

Comparisons between survey results and police reports

Box: Comparison of survey and police data

Media relations

Box: Guide to media releases

Box: An example of a media release

Less formal dissemination

Summary of points: Publication and dissemination

Data disclosure controls

Importance of preserving confidentiality

Methods of accessing data

Confidentializing data

Box: Victims of robbery: Type of weapon used in most recent incident

Reference

Ch. III.U. Closing the circle evaluating existing surveys

The importance of the evaluation process

Data quality

Survey goals

Utility of the survey

Review of survey protocols

Methodological research

The U.S. experience

Part IV. Comparability of data across countries

APPENDICES:

Appendix A: Glossary of survey related terms

Appendix B: Business Surveys

(Incomplete rough draft submitted)

Coverage for business surveys

Sampling

Telephone

Telephone contact and immediate interview

Box: CCBS introduction for first contact

Telephone contact to introduce the survey for subsequent interview

Letter of introduction

Obtaining consent
