MEASURING MULTIDIMENSIONAL POVERTY – EVIDENCE FROM MOLDOVA

Ala Negruta, Veronica Nica,

National Bureau of Statistics of Moldova
Poverty line

Absolute poverty line:
- **1993-2000** – Minimal consumer budget
- **2000 up to now** – Subsistence level
- **2004** – *first absolute poverty line* approved by Strategy of economic growth and poverty reduction (SCERS)
- **2006 up to now** – *revised absolute poverty line* and approved by Government Decision:
  - food and non-food component – *total poverty line*
  - food component – *extreme poverty line*
- **2009 up to now** – national threshold used for mean tested social allocation for poor
- **2016** – revision of absolute poverty line.

*Source:* Household Budget Survey (2006-2014), NBS
Poverty rate (MDGs), 2006-2014

The share of population below the absolute poverty line
The share of population below the extreme poverty line
The share of population whose consumption is under $4.3 a day/person (PPP)
The share of population with under $2.15 a day/person income (PPP)

Data source: Household Budget Survey

i) measures of living standards,
ii) consumption and income structure,
iii) weights for consumer price index and
iv) various estimates for the National Accounts.

**Sample size** – 9 768 households;

- **Data collection method:**
  - paper based interview (face to face interview and self recording of diary)

- **Survey tools:**
  - Household roster: socio and demographic characteristics, education, employment, housing, land, etc.
  - Diary: income, expenditure (cash, in-kind)
  - Non-response sheet: reasons of non-responses and key variables about non-respondent
Why thinking beyond monetary measure?

i) Need to align to EU Acquis Communautaire on Statistics:  
*Chapter 6 Statistics*

ii) Agenda 2030 on Sustainable Development Goals:  
**SDG Target 1.2:**

By 2030, reduce at least by half the proportion of men, women and children of all ages living in poverty in all its dimensions according to national definitions
Why thinking beyond monetary measure?

Monetary poverty:

- Time and cost of survey (data collection)
- Comparability
- Does not show how people are poor

A good poverty measure can and should:

- produce the official statistics of multidimensional poverty
- identify overall patterns of deprivation
- compare the composition of poverty in different regions or social groups
- report poverty trends over time
- monitor the changes in particular indicators
- evaluate the impact of programmes on multiple outcomes
- target geographical regions or households for particular purposes
## Methodological approach

<table>
<thead>
<tr>
<th>At risk of poverty</th>
<th>No differences</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Low work intensity</strong></td>
<td>Defined as people of all ages (0-59) living in households where the members of working age worked less than 20.0% of their total potential during the previous week (40 hours/week)</td>
</tr>
</tbody>
</table>

### Material deprivation

#### EU

- Keeping the home adequately warm
- Face unexpected expenses
- Eat meat, fish or a protein equivalent every second day
- A week of holiday away from home once a year
- Avoiding arrears (in mortgage or rent, utility bills, or hire purchase instalments)

#### MD

- To keep the house adequately warm
- Face unexpected expenses of **5000 lei**
- To include in the diet meat or fish every second day *(if desired)*
- A week of holiday away from home once a year
- 1. For paying utility bills
   2. For bank credit reimbursement

<table>
<thead>
<tr>
<th>Financial affordability</th>
<th>A personal car</th>
<th>* Car, personal minivan</th>
</tr>
</thead>
<tbody>
<tr>
<td>A washing machine</td>
<td>* Automatic Washing Machine</td>
<td></td>
</tr>
<tr>
<td>A colour TV</td>
<td>* TV</td>
<td></td>
</tr>
<tr>
<td>A telephone</td>
<td>** Telephone</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mobile phone</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Number of items</th>
</tr>
</thead>
</table>
Monetary vs. non-monetary deprivations?

In Moldova (2014):

- AROPE: 62.5%
- Monetary poverty: 11.4%

!!! Income doesn’t tell the full story – even of material deprivation in industrial economies
Overlapping domains of multidimensionally poverty and monetary poverty, 2014

Material deprivation rates, for total population and by items, 2014

Source: Authors’ estimates based on the data from HBS (BNS, 2014)
Main challenges

✓ Data are based on household level (EU- SILC is not available)
✓ Data doesn’t reveal the individual poverty, but household poverty
✓ The HBS questionnaire need to be adjusted by including more questions, which would measure:
  – the financial capacity to afford some of the items included in the MD
  – the number of months worked during the last 12 months
✓ International comparison difficult
  – a common view on operational definitions and methodological solutions needed
✓ Need to raise users awareness on multidimensional deprivations.
Thank You!
