Informal Economy Task Team
SEPTEMBER 1, 2020

Paul Austin
Real Sector Division
IMF Statistics Department
Outline

- Motivation
- Informal Economy Task Team
- Tentative Workstreams
Motivation

✓ The informal economy is of interest to policymaking from an economic and social perspective. Measuring the informal economy can help make policies more effective and better targeted.

✓ The informal economy is particularly large in low income economies.

✓ Increasing digitalization has created new forms and more opportunities for individuals, including those with higher skills, to engage in informal–gig economy–jobs either as their main job or to supplement their income.

✓ The informal economy is hard to measure.
Motivation

✓ Measuring informal activity is of interest to policymaking from an economic and social perspective.

✓ Measuring informal activities can help make policies more effective and better targeted.

✓ Issues related to working conditions, tax revenue, and economic growth are all tied to measuring informal activity.

Motivation

✓ The informal economy is particularly large in low income countries.

✓ Some estimates place informal activity as high as 40% of GDP.

✓ Improved measures of informal activity have led to upward revisions of 20% of GDP in some countries.
Motivation

Increasing digitalization has created new forms and more opportunities for individuals, including those with higher skills, to engage in informal—gig economy—jobs either as their main job or to supplement their income.

An added complication includes potential cross-border flows in the delivery of services.

- **Toptal**: Best for IT Professionals
- **FlexJobs**: Best for Remote Jobs
- **Fiverr**: Best for Creatives
- **LinkedIn ProFinder**: Best for Networking

**Hire the best freelancers for any job, online.**

Millions of people use freelancer.com to turn their ideas into reality.
## Motivation

Informal activities are difficult to measure.

Most countries rely on survey’s that are only conducted on a periodic basis.

Current estimation methods are based on strong assumptions. Unofficial estimates are often based on macro-economic models.

Informal Economy Joint Task Team

Given the importance of informal activity and the intersection between informal activity and digitalization, the ISWGENA and BOPCOM agreed to establish a Joint Task Team responsible for examining the different aspects of measuring informal activity. A key part of the mandate is to ensure that:

- The guidance is based on country practices and contributes to increased global coverage and harmonization of statistics on the informal economy across countries.

- The guidance notes would contribute not only to the work related to the updates of 2008 SNA and BPM6, but also the ILO’s revision of the standards for statistics on informality.

Chairpersons:
Chris Mukiza (Uganda)
Thomas Alexander (IMF)

Secretariat:
UNSD
IMF

Proposed Membership:
10 countries covering the following regions: Africa, Western Hemisphere, Asia, Europe as well as the OECD, UNECE and Eurostat.
Informal Economy Joint Task Team

✓ The BPM6 and 2008 SNA update processes have a five-year timeline—split into two phases—ending in March 2025. The IETT’s mandate spans mostly Phase I of the update process—March 2020 to March 2022.

✓ Within that time frame, the IETT is expected to undertake thorough research on informal economy issues, discuss and reach conclusions, with proposals to be presented to the AEG, BOPCOM and the ILO Working Group for the Revision of the standards for statistics on informality.

✓ The IETT may also be consulted during Phase II on an as-needed basis, should any significant issues arise during the worldwide consultation process.

Three (proposed) workstreams

1. Clarify the definition of the informal economy

2. Clarify how the informal economy should be presented in the System of National Accounts and Balance of Payments

3. Clarify and provide guidance on the methods countries can use to measure the informal economy.
**Workstream 1** - What is the “Informal Economy”?

- **Term used broadly** to describe the part of the economy that may not be covered in official statistics, production taking place outside the regulated economy, or the production of households.

- **Term has been used interchangeably with others** to describe not only the activities, but also consumers, and employment that may elude official statistics.

- Diverse presentations at the 2019 IMF Statistical Forum in part shows that the informal economy is being interpreted in different ways.

- Also sometimes used interchangeably with **informal sector**
  - Distinction in International Labour Organization (ILO) standards.

(Workstream 1) - What is the “Informal Economy”?

2008 SNA chapter 25 outlines two approaches with different goals:

- Ensure that all activities including those that may be described as “hidden” or “underground” are encompassed in measures of total activity
  - **Goal is an accurate measure of economic activity**
- Define what is meant by the **subset of economic units** that can be considered “informal”
  - **Recognizes the analytical importance, especially in developing countries, of measuring that part of the economy that reflects the contribution of people without formal jobs to economic activity**
- The goals and concepts of the two approaches in the SNA overlap but they are **NOT** the same.
  - E.g. SNA notes that some informal activity can be observed (in a statistical sense)
(Workstream 2) – Presenting informal activities

1. Most countries do not publish explicit estimates of informal activity.

2. The presentation is often inconsistent from one country to the next.

3. Sometimes informal activity is presented with official estimates and sometimes it is presented as an independent estimate / study.

2019 IMF Statistical Forum - Mr. Francisco Guillen (Mexico, INEGI), Measurement of the Informal Economy. From Basic to Derived Statistics.
(Workstream 3) – Measuring informal activities

Official estimation

- Official statistics agencies generally do not publish specific estimates of the informal economy. Focus instead on developing accurate (exhaustive) estimates of economic activity.

- Even if separate statistics are not published, countries apply various estimation techniques to account for these activities.

Non-official estimation

Estimates vary, but show that it is large

- Based on macro indirect approaches, such as:
  - Discrepancy between national expenditure and income statistics
  - Discrepancy between the official and actual labor force
  - “Electricity consumption” approach
  - “Monetary transaction” approach
  - “Currency demand” approach
  - “Multiple Indicators, Multiple Causes” (MIMIC) models
  - Dynamic general equilibrium (DGE) models
BOPCOM (2018) identified data sources as the main obstacle in developing estimates of cross-border informal activity.

In the same study 17 respondents indicated that less than one percent of total exports and imports are accounted for by IE estimates; 11 economies noted the same percentage for imports of services, and eight economies for exports of services. Six economies indicated that over five percent of imports of goods are accounted for by IE estimates.

END

Thank you!
