+

- Possible press conferences for:
 - Statisticians
 - Users of the statistical data
 - Producers of the statistical data
 - Students, professors and researchers
 - TV and radio journalist
 - Newspaper journalist

For the end...

- The publication was produced after a review of the users' needs for monitoring the situation in society and relations between the sexes using statistical data, with the intention of rendering statistical data more useful in the design and implementation of policies aimed at eliminating inequalities and advancing equal opportunities.
- Gender statistics have to respond to the needs of policymakers, advocates, researchers, the media and the public.
- Gender statistics can be used:
 - To promote understanding of the actual situation of women and men in society;
 - To advance gender analysis and research;
 - To monitor progress towards gender equality and all human rights and fundamental rights by women and girls and
 - To monitor policies on the reduction of violence against women.

For the end... 2

- Regular and comprehensive monitoring and presentation of statistical data by sex enables the assessment of the state of society in terms of gender discrimination. Gender statistics should enable creation, planning and implementation of policies that are aimed to eliminate inequality and improving the status of women and men.
- With this publication, Statistical Office of the Republic of Serbia continues to build sustainable institutional program of gender statistics.

Thank you for your attention!

Dragana Djokovic - Papic,
Head of the Division for Social Indicators,
Justice and Gender statistics
