Gender Statistics on Health

UNECE workshop on Disseminating, Communicating and Using Gender Statistics

Bishkek, 29-31 May 2018
Session outline

1. Health and statistics
2. Gender and health
3. Data sources
4. Understanding key gender indicators
5. Practical exercise
“A state of complete physical, mental and social well-being and not merely the absence of disease or infirmity” (WHO, 1946)

Some determinants of health:

• **Sex** (biology)
  Women need access to health care during pregnancy

• **Gender**
  Men are more likely to smoke and consume alcohol

• **Poverty**
  The infant mortality rate is higher in the lowest income groups

Health equity
  Reducing avoidable health differences by taking into consideration specific needs according to sex, gender, age, minority groups, etc.
The importance of health statistics

• One of the widest statistical domains
• Incorporates a great variety of data e.g. on incidence and prevalence of diseases
• Used to evaluate health care system performance by examining levels of health in a population
• Used to analyze different determinants of health status
• Used by Governments to inform and monitor health policy
Gender and health

**Gender norms**

*Women*
- Lack of time (prioritize others’ needs)
- Worse socioeconomic conditions

*Men*
Higher-risk behaviours

**Gendered health outcomes**

*Women*
- Barriers to use of healthcare services

*Men*
- Higher risk of disease and premature death
- Greater number of accidents and violence-related injuries

**Health equity for men and women:**
- Same possibilities for men and women to access healthcare services (*gender equality*)
- In healthcare services men and women should be treated in proportion to their need (*gender equity*)

**Gender statistics on health:**
- Monitor the differences between men and women in health status
- Provide evidence for policies
Example: adolescent fertility rate

Adolescent fertility in Central Asia, 1990 and 2016

- Measures the annual number of births to women aged 15 to 19 per 1,000 women in that age group
- Provides a measure of reproductive health focusing on a vulnerable group
- Early pregnancies are subject to higher risk of complications and higher risk to child health

Possible strategies
- Education including sex education
- Employment opportunities for youth
- Family planning services and knowledge

Data: The World Bank
Data sources

Administrative records

• Hospital records, healthcare services, other health providers
  • Birth registers
  • Information on morbidity and mortality
  • Reports on vaccinations
  • Maternal health and congenital malformation data

• Civil registers and vital registration
  • Birth and death data
  • Causes of death
Data sources

- **Surveys**
  - Household surveys
    - Specific diseases
    - Health issues that are often unreported or undetected
      - Gender-based violence
      - Sexual and reproductive health
      - Attitudes and behaviours
      - Nutrition and diet
  - Birth histories
    - Detailed questions on women’s pregnancies and reproductive outcomes
Data sources

• **Population and housing censuses**
  • Basic information on fertility and mortality
  • Prevalence of disabilities
  • Questions are limited
  • Infrequent
  • Not suited for collecting detailed and sensitive information about health
# Health system statistics

Example: life expectancy at birth

- Life expectancy at birth for both sexes increased over this period
- Gender gap persists

Data: World Health Organization, The World Bank
Example: causes of death

Age-standardized death rate from injuries in Central Asia, 2008

Data: World Health Organization, Disease and injury country estimates
Example: risk factors for non-communicable diseases

<table>

</tbody>
</table>

*Data: World Health Organization, Non-Communicable diseases, Risk factors*
Practical exercise: maternal mortality ratio

- Get into groups of about 5 people
- Start by calculating the missing numbers in the table
- Then discuss the questions and write some ideas on your flipchart (about 20 minutes: 3-4 ideas per question)
- Be ready to report back the most interesting observations to the rest of the workshop
- For the discussion items: not looking for ‘the right answers’: there are many, many right answers here!
