

Technical guidance for monitoring and reporting on progress in achieving the global targets of the Sendai Framework for Disaster Risk Reduction:

Experiences from the first cycle of monitoring

3 October 2018

Palais des Nations, Geneva

Structure of the presentation

1. Monitoring mechanism of the Sendai Framework
2. Institutional arrangements for monitoring process
3. Key documentation for monitoring and reporting

1. Monitoring mechanism of the Sendai Framework

- The Sendai Framework and its key elements
- Architecture of Monitoring system
- Global and Custom Targets and Indicators
- Seven Global Targets in a snapshot
- Linkage between Sendai Framework and SDG reporting

The Sendai Framework and its key elements

The Sendai Framework is a 15-year, voluntary, non-binding agreement which recognizes that the State has the primary role to reduce disaster risk but that responsibility should be shared with other stakeholders. It was adopted by UN Member States in March 2015.

Its key elements are as follows:

1 Scope and Purpose

1 Expected Outcome

1 Goal

4 Priorities for Action

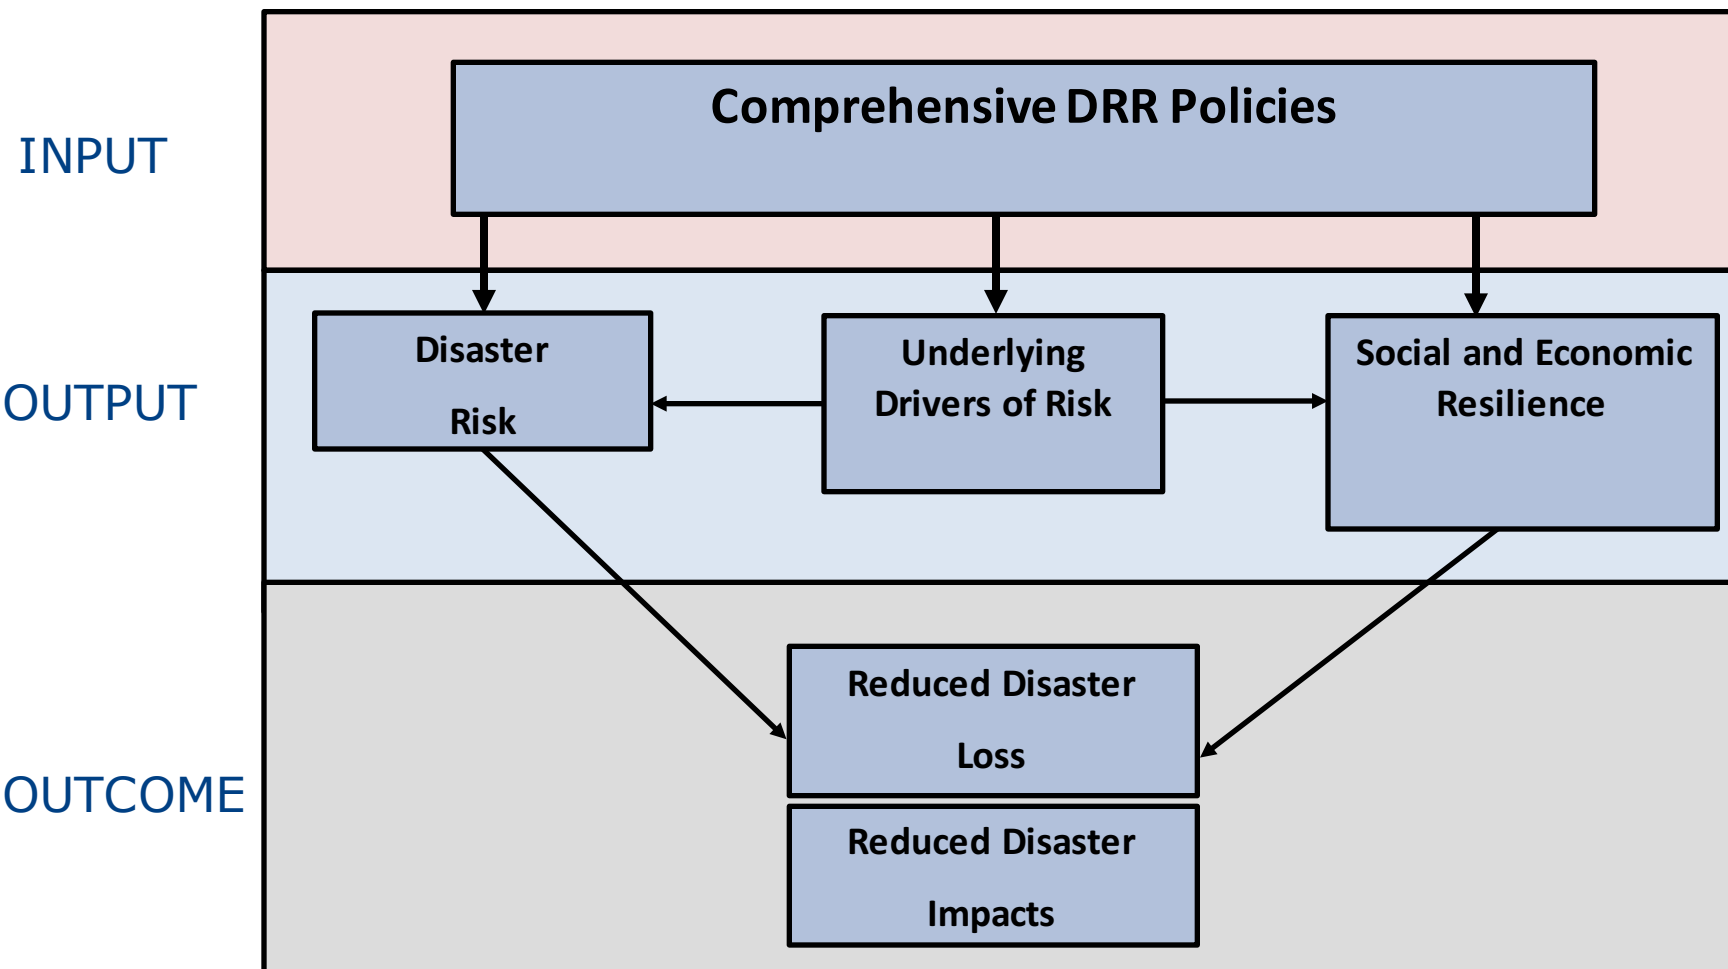

13 Guiding Principles

4 levels (Global, Regional, National and Local)

7 Global Targets

The Open-ended Intergovernmental Expert Working Group (OIEWG) recommended 38 indicators aligned with the 7 Global Targets. It also recommended the development of nationally determined custom indicators.

Architecture of SF Monitoring system

Sendai Framework Monitor (SFM): Global and Custom Targets & Indicators

Objective and comparable
(**Outcome level**)

Nationally defined targets and indicators to
measure DRR & increase in resilience
(**Output level**)

Nationally defined **public policy indicators**
to measure the implementation of SF & the
4 Priorities (Input level)

7 GLOBAL TARGETS

Reduce

A

**Mortality/
global population**

2020-2030 Average << 2005-2015 Average

B

**Affected people/
global population**

2020-2030 Average << 2005-2015 Average

C

**Economic loss/
global GDP**

2030 Ratio << 2015 Ratio

D

**Damage to critical infrastructure
& disruption of basic services**

2030 Values << 2015 Values

Increase

E

**Countries with national
& local DRR strategies**

2020 Value >> 2015 Value

F

**International
cooperation**

to developing countries

2030 Value >> 2015 Value

G

**Availability and access
to multi-hazard early warning
systems & disaster risk
information and assessments**

2030 Values >> 2015 Values

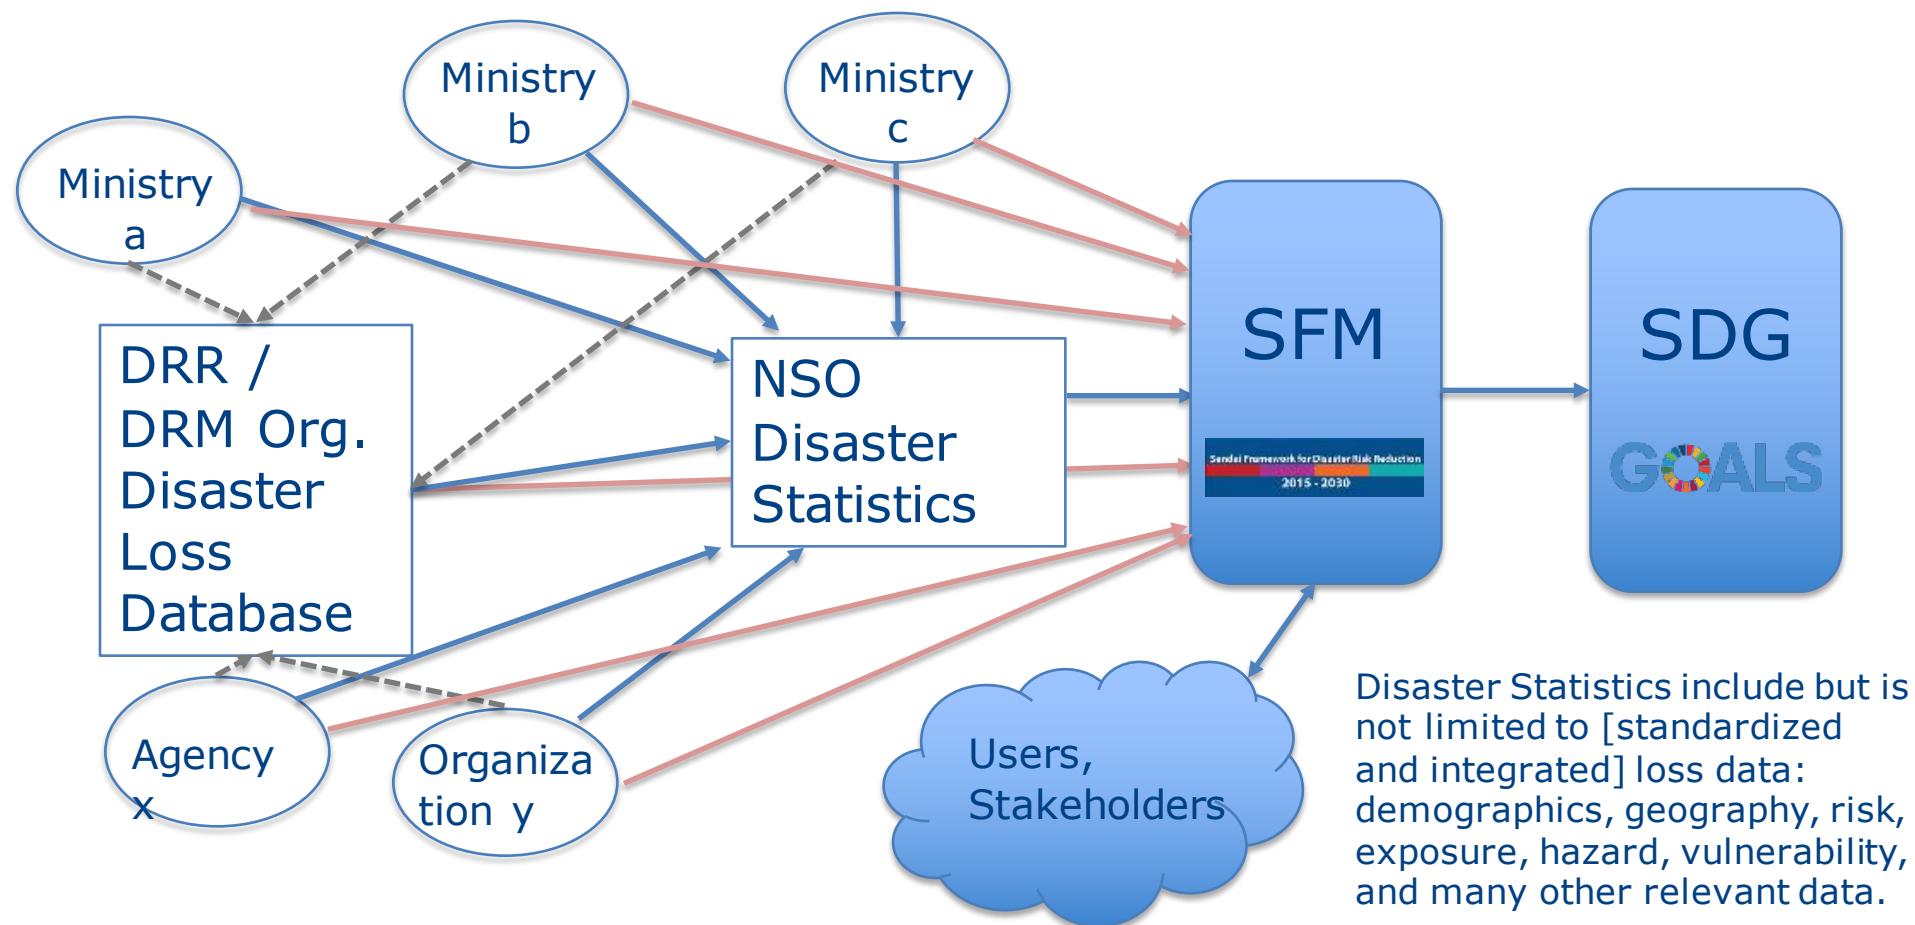

Disaster risk reduction indicators in measuring the 2030 Agenda

2. Institutional arrangements for Sendai Framework Monitoring

- Possible DRR information flows on DRR within a country
- Role of National Statistical Organizations
- Allocation of authority and responsibilities for Reporting
- Timeline for reporting on the Sendai Framework
- Key challenges and what approaches are working

Possible DRR information flows on DRR within a country

Potential Roles of NSOs in the Sendai Framework monitoring process

- Support to Coordination and Data Sharing
- Storage and preservation of data
- Processing of data and data quality assurance
- Support, hosting or operation of National disaster loss databases
- Production of disaster-related statistics
- Production of climate change-related statistics
- Coordinating Geographical information services
- Provision of data sharing platforms
- Endorsing data as Official Statistics

and many more ...

Allocation of authority and responsibilities for Reporting

- **Nomination of Sendai Framework Focal Point**
Institution pre-defined
- **Selection of Institutions** to be engaged in the monitoring process
- **Definition of roles and responsibilities** of the selected Institutions

Country: Roles & responsibilities

Coordinator

Sets up the national monitor:
adds users, institutions, configures metadata, creates
national custom reporting

Contributors

Enter data for their assigned indicators

Validator

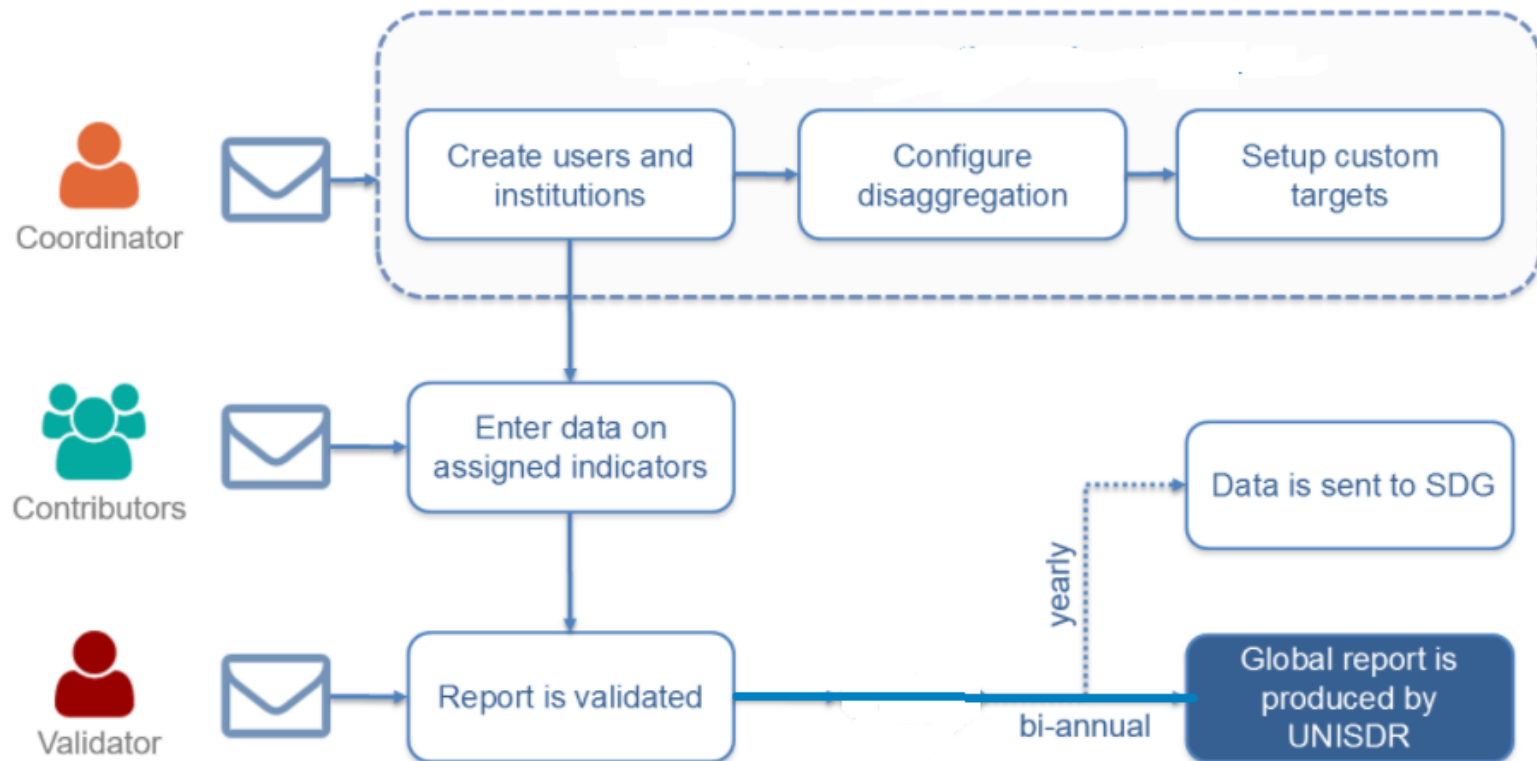

Validates report once data entry is complete

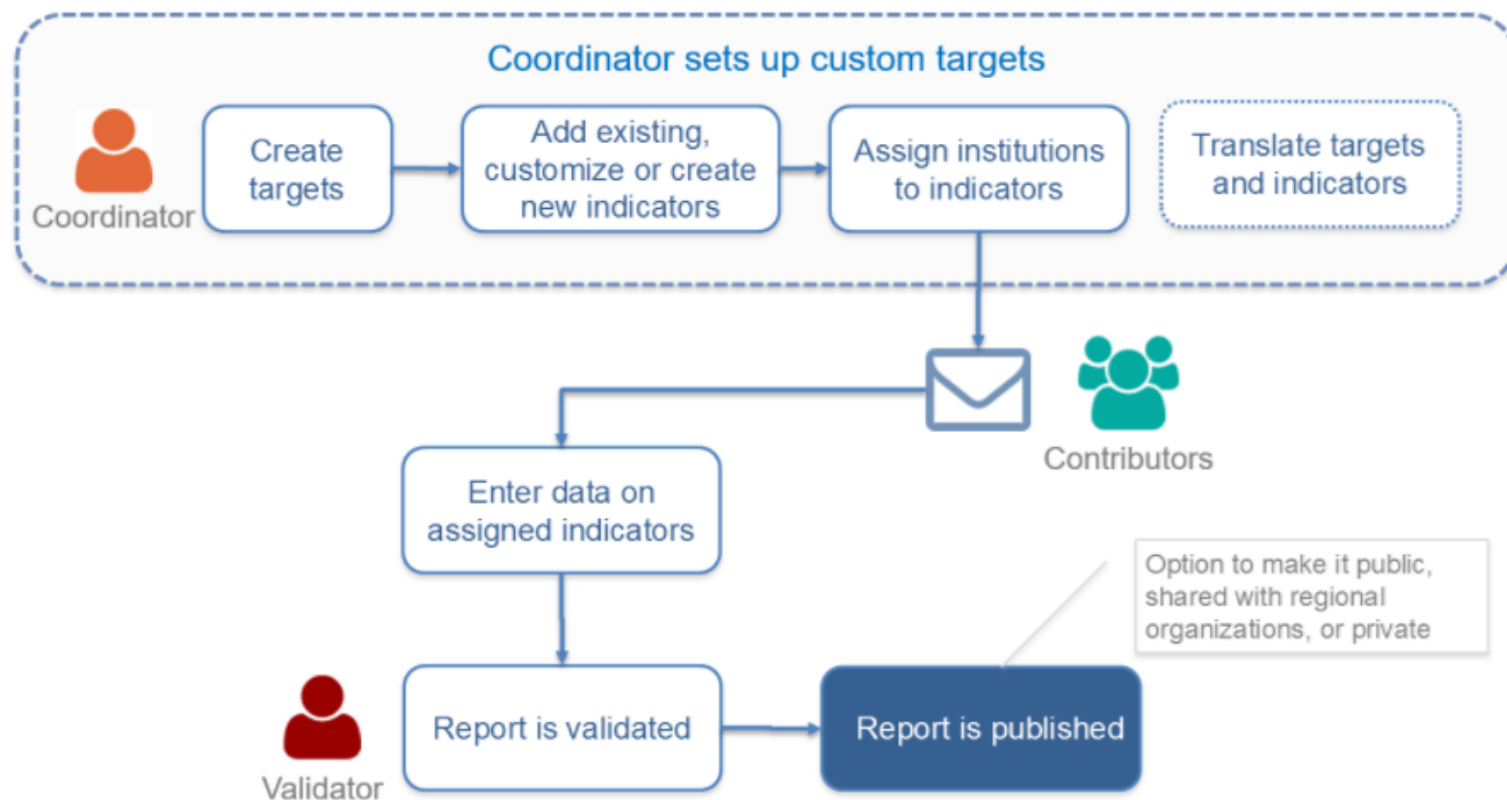

Observers

Have read-only access and are optional

Global targets

Custom targets

Timeline for reporting over 2018 - 2019

Year	Deadline of snapshot	Data for Period	Data for Sendai Framework Target	Purpose for which data is to be used
2018	31st March, 2018	Data for 2017	Targets A, B, C, D and E (related to SDG indicators)	Required for reporting against related common SDG indicators and forwarding to DESA for input into SDG report 2018 through HLPF 2018 (July 2018)
	15th October, 2018	Data for 2015, 2016, and 2017	All global targets of Sendai Framework (i.e. A-G)	Required for reporting at the Global Platform 2019 (May 2019) and as input into GAR 2019
2019	31st March, 2019	Data for 2018	Targets A, B, C, D and E (related to SDG indicators)	Required for reporting against related common SDG indicators and forwarding to DESA for input into SDG report 2019 through HLPF 2019 (July 2019)
	30th April, 2019	Baseline data for the period from 2005 to 2014	Data for Targets A and B are required (Data for Targets C and D are optional)	Required for Baseline information for Common indicators of Sendai Framework and SDG

Challenges related to Sendai Framework monitoring

- Many countries need to establish or enhance internal government mechanisms to better coordinate data collection, data sharing and data reporting.
- Need to harmonize NSO and Sendai Framework National Reporting efforts. National SDG Committee may not be linked with the national Sendai Framework reporting through the NDMO
- Need greater training and technical support to countries to further develop capacities in monitoring
- Lack of disaggregated and baseline data

What Approaches are Working?

- NDMOs are linking with National Statistics Offices and PMs Office to leverage support. (e.g. in Europe we have Armenia, Croatia, Germany, Sweden, UK among others)
- Utilizing existing SDG or other existing National Committees to also assist in Sendai Reporting (e.g. validating data) – instead of creating new committees.
- Coordination workshops -Bringing all relevant Govt partners together to identify who has what data and when they could provide it for reporting purposes.
- Networking among countries on disaster related statistics (e.g.in the Americas)

3. Key Documentation for the Sendai Framework monitoring

- Sendai Framework for Disaster Risk Reduction (DRR)

[*https://www.unisdr.org/we/inform/publications/43291*](https://www.unisdr.org/we/inform/publications/43291)

- Report of Open-ended Intergovernmental Expert Working Group (OIEWG) on indicators and terminology related to DRR

[*https://www.preventionweb.net/drr-framework/open-ended-working-group/*](https://www.preventionweb.net/drr-framework/open-ended-working-group/)

- Technical Guidance on monitoring of the Sendai Framework

of the Sendai Framework for Disaster
Risk Reduction

Collection of Technical Notes on Data and Methodology

December 2017

For each Target and Indicator :

- Minimum data set required
- Recommended optimal dataset (including disaggregation)
- Challenges, temporal considerations, etc.
- Computation methodology (minimal to recommended datasets)
- Metadata: contents, methodology and other topics (coverage, representativeness, quality)
- Contribution from experts from UN organizations such as FAO, WHO, Regional Commissions among others
- Use commonly used standards such as International Standard Industrial Classification (ISIC) while accounting for economic loss in productive assets
