Understanding personalities in data access decision-making

Richard Welpton, Senior Data Manager

UNECE Work Session on Statistical Confidentiality Workshop, October 2019
Access to sensitive data is getting easier.....

Changes to legislation

More and more
Safe Settings
Who makes the final decision?

Introducing the Information Asset Owner

- Civil servants working in government agencies
- Middle-management role
- Responsible for a particular data source
- Signing-off on use of data
- Responsible if things go wrong
Making a decision

- Is there a legal basis for allowing these data to be used?

- Are there any (confidentiality) risks?

- Is there a ‘public benefit’?
Do we have the right reward structure in place?

- Are IAOs rewarded for taking risk and delivering data access?
- Or more likely to be rewarded for taking a risk-averse approach?
- What information do they have to base their decision on?
How can we capitalise on the new landscape?

**Frameworks**
- 5 Safes
- Anonymisation Decision Making Framework

**Researchers**
- Part of the solution?
- A two-way contract

**Organisational**
- Sign-off at the top is a necessary first condition
- Think about where decisions are made: what support do they need?
Thank you
