Future activities, priorities and opportunities

Suggestions for the draft guidelines

▶ Add the 'softer' aspects to the guidelines – for example

  ▶ What not to do when implementing risk management

  ▶ What was most successful

  ▶ What was most difficult

▶ Risk matrix: 3 point vs 5 point scale

  ▶ Advantages and disadvantages, why would an organization choose one or the other

▶ More detail required on risk appetite

  ▶ Definition, benefits, specific examples from countries

▶ Create / add a maturity map between risk management, project management and quality management

▶ Add examples of common risks facing all of our organizations, link to GSBPM, classified by outputs, ex Census, LFS, GFS, etc.

Suggestions for future activities

- How to evolve risk management in the context of Agile software development / project management methodologies

- How to assess, monitor and report on the overall health of a portfolio
  - Analysis of project risks, interdependencies, quality, changes, issues, etc.

- Training on risk management (in class? / on line)
