Industrialization of statistical production by GSBPM
September 2016
Objective

To identify opportunities to improve the coordination of processes, the optimization of resources (by cost reduction) and the intensive use of sources for DANE’s modernization, based on the GSBPM international standard.
Phases

PHASE 1: Mapping

• Mapping of the GSBPM and the DANE Statistical Production Model (hereinafter, SPM) in order to match processes.
• Diagnosis of the DANE SPM in order to identify the opportunities for modernization.

PHASE 2: Prioritization

• Definition of criteria for the prioritization of opportunities.
  • Criteria:
    ➢ To be applicable for as many general problems as possible.
    ➢ To make a better cost-benefit ratio.
    ➢ To impact as many SPM phases as possible.
    ➢ To require less time for their execution.

• Definition of strategies to be included in the modernization plan.
• Development of the modernization plan.

PHASE 3: Implementation

• Implementation of the modernization plan.
• Carrying out of an Impact Assessment with respect to the plan.
PHASE 1: Mapping
## DANE’s STATISTICAL PRODUCTION MODEL

MPE-DANE vs GSBPM

**GSBPM**
1. Specify needs
2. Design
3. Build
4. Collect
5. Process
6. Analyse
7. Disseminate
8. Evaluate

**SPM - DANE**
- Detection and requirements analysis
- Design
- Build
- Analyze
- Disseminate
- Evaluate/Quality control actions
PHASE 2: Prioritization
Methodology

To perform the optimization of resources for selected statistical operations.

To review the documentation and other technical aspects of the set of statistical operations selected.

To design a questionnaire for each technical team of the statistical operation (i.e., thematic, logistics, IT and sampling).

To conduct a pilot test in order to validate the questionnaire.

To have each of the technical teams complete the questionnaire.

To analyze the information collected.

</table>
• Human resource training.
• Extended use of self-completion for forms.
• Improvement of hand-held capture devices with respect to hardware and software.
• Design of an electronic form.
• Promotion of the use of technological tools.
• Creation of a single cost model
• Creation of modules and bank of questions standardized by topic.
• Strengthening of the SIMCO system.
• Establishment of improvements in the quality assessment process.
• Creating a harmonized system of variables.
• Standardization of a methodology for field operations.
