IMPLEMENTATION OF RECOMMENDATIONS FROM GLOBAL ASSESSMENTS

Deputy Director of Agency on Statistics under the President of the Republic of Tajikistan

Norov K.D.

Ulaanbaatar, September 2014
History of Global Assessments in NSS of Republic of Tajikistan

- Global Assessments (GA) of National Statistical System of Republic of Tajikistan was jointly organised by UNECE, EFTA and Eurostat
- Official request for a GA from Agency on statistics under the President of the Republic of Tajikistan
Main recommendations and implementation: legal and institutional framework

- Translation of the UN Fundamental Principles of Official Statistics, along with the principles of confidentiality and professional independence according to the UN-FPs
- Strict compliance with the single (one-way) flow principle of unit-level data collected for statistical purposes
- Revision of the content of the annual and multi-year statistical programmes
- *Translation of the UN Fundamental Principles of Official Statistics is done*
- *Implementation of the single (one-way) flow principle of statistical data; improved processing of administrative data*
- *Annual statistical programme covers administrative sources of data*
Main recommendations and implementation: on dissemination, communication and relations with users and stakeholders

- Implement the data dissemination strategy and comply with the relevant provisions of Law on State Statistics (LSS)
- Improve the data transparency and data accessibility
- Keep confidence to the National Statistical System (NSS)

- All printed statistical publications were uploaded to the dedicated section on the web site of TAJSTAT
- All publications were updated with presentations and tables with short explanations
- Several databases were created and uploaded to the web site (Censusinfo, Tojikinfo)
Main recommendations and implementation: on data sources and processing quality monitoring, registers and nomenclatures

- Check if exhaustive statistical reporting could be replaced by sample surveys (statistical observations) or administrative data
- Align national nomenclatures to recent worldwide and European international classifications and expand the scope of the business statistical register
- *It is developed a piloted methodology transition from universal enumeration to a sample survey farm households;*
- *Based on international Classification of goods and services it is developed an adapted Classification of goods and services*
- *Set up a creation of the business statistical register, based on data subjects of statistical accounting and administrative records (system of «single window»)*
Main recommendations and implementation: on specific statistical domains

• Step by step transition on integrated Household Budget Surveys complemented by rotating modules on specific subjects, such as labour force and employment, education and health
• Further improve the accuracy and coverage of the vital register system, in particular for the coverage of birth and death of children below compulsory school age

• Developed new questionnaires, completion guidelines, data processing software of integrated Household Budget Surveys complemented by new modules such as labour force and employment, education and health
• Conducted analytical efforts of the administrative records of birth and death
Main recommendations and implementation: System National Accounts and price statistics

• Compilation of supply-use tables (SUTs)
• Formation of quarterly data on discrete bases
• Improvement of the accuracy and coverage of data on macroeconomic statistics
• Calculation of consumer Price Index (CPI) using geometric mean

• Final stage of implementation of SUTs based on data for the year 2011
• Approved statistical form of industrial activity on a quarterly basis
• Implementation of a software for the calculation of CPI
