

**COMMITTEE OF EXPERTS ON THE  
TRANSPORT OF DANGEROUS GOODS**  
**Sub-Committee of Experts on the**  
**Transport of Dangerous Goods**  
(Twenty-first, Geneva, 1-10 July 2002,

**MISCELLANEOUS DRAFT AMENDMENTS TO THE MODEL REGULATIONS  
ON THE TRANSPORT OF DANGEROUS GOODS**

**Gas Cylinders and other gas receptacles**

**Submitted by the Compressed Gas Association**

The Compressed Gas Association offers the following request for consideration by the Sub-Committee and the Gas Receptacle Working Group:

**ISO 11119**

The Compressed Gas Association (CGA) requests that the following ISO standards be adopted into the UN Model Regulations:

**ISO 11119-1** - Hoop wrapped composite gas cylinders

**ISO 11119-2** - Fully wrapped fibre reinforced composite gas cylinders with load-sharing metal liners

**ISO FDIS 11119-3** - Fully wrapped fibre reinforced composite gas cylinders with non-load sharing metallic or non-metallic liners

The third part of this standard is at the ISO FDIS vote stage and voting is to be completed July 2, 2002. Approval of the FDIS is anticipated.

**ISO 11623**

The CGA believes that re-qualification is important and an appropriate inspection and re-testing guideline must be available. Therefore the CGA requests that the following ISO standard also be adopted into the UN Model Regulations:

**ISO 11623** - Transportable gas cylinders — Periodic inspection and re-testing of composite cylinders.
