

**OICA PROPOSAL FOR A CORRIGENDUM RELATING TO**  
**DOCUMENT ECE/TRANS/WP.29/2007/26**

Annex 4A, Appendix 2, paragraph 5.4.1, amend to read:

" Alternatively, if the fuel composition is not known, the following stoichiometric factors may be used:

$$F_S \text{ (diesel)} = 13.4$$

$$F_S \text{ (LPG)} = 11.6$$

$$F_S \text{ (NG)} = 9.5$$

$$F_S \text{ (Ethanol)} = \mathbf{12.3''}$$

**JUSTIFICATION**

The  $F_S$  factor for ethanol-fueled engines was not carried over from Directive 2005/55/EC Annex VIII when aligning ECE R 49 with the Directive. All other calculation procedures for ethanol engines originally included in Annex VIII of the Directive 2005/55/EC are covered within the general calculation sections of document ECE/TRANS/WP.29/2007/26.
