Document on telltales for GRSG/AC3

1. Background

When Italy proposed developing a GTR on motorcycle telltales and symbols (WP.29/2006/74), AC3 asked GRSG to analyse whether or not the same problems would arise as had arisen during the discussions of a similar proposal for passenger cars.

IMMA undertook to review the situation in relation to:

- the similarity of the symbols used (cars and motorcycles)
- the results of the Alliance study on the recognisability of the symbols
- current market practice

The results are summarised in *Annex 1*.

2. Discussion

There are 21 symbols listed in the Italian proposal.

Of these:

- 13 are already used worldwide
- 4 are for devices not fitted in some of the markets
- 2 have alternative options to the symbol
- 1 is a marking that is not required in all markets
- 1 apparently is not used at all

The scores from the Alliance study reflect this market reality, as well as the fact that some symbols are unique to motorcycles.

3. Conclusion

Most of the symbols are used world wide, which justifies using them in a GTR. Others are currently more frequently found in some regions or might be used in future situations.

Several Contracting Parties allow the use of the national language as an alternative means of marking controls. This practice should continue when the GTR is implemented by such administrations and a phrase indicating this possibility should be included in the GTR.

On this basis, IMMA thinks that the proposed symbols could all be included in a GTR so that they are available for any administration wishing to make use of them.
