The text reproduced below was prepared by the expert from the Working Party "Brussels 1952" (GTB) in order to change the basis for the photometric requirements from 12.0v to 13.2v, to align the cut-off definitions with Regulations Nos. 98 and 112 and to correct some editorial errors. The modifications to the current text of the Regulation, including draft Corrigendum 2 to Regulation No. 123, are marked in bold or strikethrough characters.

---

* In accordance with the programme of work of the Inland Transport Committee for 2006-2010 (ECE/TRANS/166/Add.1, programme activity 02.4), the World Forum will develop, harmonize and update Regulations in order to enhance performance of vehicles. The present document is submitted in conformity with that mandate.

GE.09-
A. PROPOSAL

The list of contents, amend to read:

"13. Transitional provisions…………………………………………………………………………………"

Paragraph 2.2.2., amend to read:

"2.2.2. …
(g) the indication(s) according to the provisions of paragraph 6.4.6. of this Regulation with respect to the paragraphs 6.22.6.1.2.1. and 6.22.6.1.3. of Regulation No. 48;
…"

Paragraph 4.2.2.2., amend to read:

"4.2.2.2. in addition to each symbol and above it a score, if the lighting function or mode thereof is provided by more than one installation unit from one or both side(s);"

Paragraph 5.7.1., amend to read:

"5.7.1. the device is robust enough to withstand 50,000 operations under normal conditions of use. In order to verify compliance with this requirement, the Technical Service responsible for approval tests may:
(a) require the applicant to supply the equipment necessary to perform the test;
(b) forego the test if the headlamp presented by the applicant is accompanied by a test report, issued by a Technical Service responsible for approval tests for headlamps of the same construction (assembly), confirming compliance with this requirement."

Paragraph 5.7.3., amend to read:

"5.7.3. in the case of failure it must be possible to obtain automatically a passing beam or a state with respect to the photometric conditions which yields values not exceeding 4.5 lux 1350 cd in the zone II b as defined in Annex 3 to this Regulation and at least 4 lux 3375 cd in a point of "segment Emax", by such means as e.g. switching off, dimming, aiming downwards, and/or functional substitution;

When performing the tests to verify compliance with these requirements, the Technical Service responsible for approval tests shall refer to the instructions supplied by the applicant."

Paragraphs 5.8.2.1. and 5.8.2.2., amend to read:

5.8.2.1. Passing beam designed for right-hand traffic and adapted to left-hand traffic:
at 0.86D-1.72L at least 2 lux 2500 cd
Paragraph 6.2.2., amend to read:

"6.2.2. The system or part(s) thereof shall be aimed according to the requirements of Annex 8 so that the position of the cut-off complies with the requirements indicated in the Table 2 of Annex 3 to this Regulation."

Paragraph 6.2.4., to be deleted and renumber subsequent paragraphs:

Paragraph 6.2.5. to 6.2.6.2.(former), renumber as paragraph 6.2.4. to 6.2.5.2.

Paragraph 6.2.6.3.(former), renumber as paragraph 6.2.5.3. and amend to read:

"6.2.5.3. when the T-signal corresponds to the vehicle's smallest turn radius to the left (or right), the sum of the illuminance luminous intensity values provided by all contributors of the right or the left side of the system shall be at least \( 3 \text{~lux} \times 2530 \text{~cd} \) at one or more points in the zone extending from H-H to 2 deg below H-H and from 10 to 45 deg left (or right)."

Paragraph 6.2.6.4.(former), renumber as paragraph 6.2.5.4.

Para.6.2.6.5.(former), renumber as paragraph 6.2.5.5. and amend to read:

"6.2.5.5. if approval is sought for a category 1 bending mode, the system is designed so that, in the case of a failure affecting the lateral movement or modification of the illumination, it must be possible to obtain automatically either photometric conditions corresponding to paragraph 6.2.4. above or a state with respect to the photometric conditions which yields values not exceeding \( 4 \text{~lux} \times 1350 \text{~cd} \) in the zone IIb, as defined in Annex 3 to this Regulation, and at least \( 4 \text{~lux} \times 3375 \text{~cd} \) in a point of "segment Emax";"

Paragraph 6.2.6.5.1.(former), renumber as paragraph 6.2.5.5.1. and amend to read:

"6.2.5.5.1. however, this is not needed, if for positions, relative to the system reference axis up to 5 deg left, at 0.3 deg up from H-H, and greater than 5 deg left, at 0.57 deg up, a value of \( 4 \text{~lux} \times 890 \text{~cd} \) is in no case exceeded."

Para.6.2.8.1.(former), renumber as paragraph 6.2.8.1. and amend to read:

"6.2.8.1. any specified passing beam mode provides at least \( 3 \text{~lux} \times 2530 \text{~cd} \) at point 50V from each side of the system; the mode(s) of the Class V passing beam are exempted from this requirement;"
Paragraph 6.2.9.2., to be deleted.

Paragraph 6.2.9.3.(former), renumber as paragraph 6.2.8.2.:

Paragraph 6.3.2.1., amend to read:

"6.3.2.1. HV shall be situated within the isolux isoline 80 per cent of maximum illumination intensity of the driving beam."

Paragraph 6.3.2.1.1., amend to read:

"6.3.2.1.1. This maximum value \( E_M \) shall not be less than \( 48 \times 40500 \text{cd} \). The maximum value shall in no circumstances exceed \( 240 \times 215,000 \text{cd} \)."

Paragraph 6.3.2.1.2., to be deleted:

Paragraph 6.3.2.1.3., renumber as paragraph 6.3.2.1.2 and amend to read:

"6.3.2.1.2. The reference mark \( I'_M \) of this maximum intensity, referred to in paragraph 4.2.2.9. above, shall be obtained by the ratio:

\[
I'_M = \frac{I_M}{4300}
\]

This value shall be rounded off to the value of: 5 - 10 - 12.5 - 17.5 - 20 - 25 - 27.5 - 30 - 37.5 - 40 - 45 - 50."

Paragraph 6.3.2.2., amend to read:

"6.3.2.2. Starting from point HV, horizontally to the right and left, the illumination of the driving beam shall be not less than \( 24 \times 20250 \text{cd} \) up to 2.6 deg and not less than \( 6 \times 5060 \text{cd} \) up to 5.2 deg."

Paragraph 6.3.4.1., amend to read:

"6.3.4.1. the lighting unit(s) of the right side and of the left side provide each at least half of the minimum illumination luminous intensity value of the driving beam as specified by the paragraph 6.3.2.2. above;"

Paragraph 6.3.4.2., amend to read:

"6.3.4.2. four seconds after switching on the system, which has not been operated for 30 minutes or more, at least 42 lx must be reached at point HV of the driving beam;

6.3.4.2. In case of the driving beam using a gas-discharge light source, four seconds after ignition of a headlamp that has not been operated for 30 minutes or more:
6.3.4.2.1 At least 37500cd shall be attained at point HV, for a headlamp producing driving beam only.

6.3.4.2.2 At least 4215cd shall be attained at point 50V for headlamps producing passing beam only or alternately passing and driving beam functions as described in paragraph 5.4. of this Regulation.

6.3.4.2.3 In either case the power supply shall be sufficient to secure the required rise of the high current pulse."

Insert new paragraph 13, to read:

"13. TRANSITIONAL PROVISIONS

13.1. From the date of entry into force of the 01 series of amendments to this Regulation no Contracting Party applying it shall refuse to grant approvals under this Regulation as amended by the 01 series of amendments.

13.2. As from 36 months after the date of entry into force of the 01 series of amendments, Contracting Parties applying this Regulation shall grant approvals only if the system meets the requirements of this Regulation as amended by the 01 series of amendments.

13.3. Existing approvals for systems already granted under this Regulation before the date of entry into force of the 01 series of amendments shall remain valid indefinitely."

Annex 1, item 9.3., amend to read:

"9.3. (a) Indications according to paragraph 6.4.6. of this Regulation (which lighting unit(s) provide a "cut-off" as defined in Annex 8 of this Regulation, that projects into a zone extending from 6 deg left to 4 deg right and upwards from a horizontal line positioned at 0.8 deg down)............................................................

(b) The adjustment of the "cut-off" has been determined at 10 m / 25 m ².

(c) The determination of the minimum sharpness of the "cut-off" has been carried out at 10 m / 25 m ²."

Annex 2, amend to read:

Example 1, amend to read:

"Example 1

... The installation unit of a system, bearing one of the above approval marks has been approved in the Netherlands (E4) pursuant to this Regulation under approval number 19243, meeting the
requirements of this Regulation in its original form (00). The passing beam is designed for right-hand traffic only. The letters "CT" (Figure 1) indicate that it concerns a passing beam with bending mode and the letters "CWR" (Figure 2) indicate that it concerns a class C passing beam and a class W passing beam and a driving beam. Number 30 indicates that the maximum luminous intensity of the driving beam is between $86\,250$ and $144\,642$ candelas.

Example 6, amend to read:

"Example 6: …

Installation unit 1

A front position lamp approved in accordance with the 02 series of amendments of Regulation No. 7;

One or more lighting unit(s), with a class C passing beam with bending mode provided to work with one or more other installation unit(s) on the same side of the system (as indicated by the score above "C") and a class V passing beam, both designed for right- and left-hand traffic and a driving beam with a maximum intensity comprised between $86\,250$ and $144\,642$ candelas approved in accordance with the requirements of this Regulation in its original form (00) and incorporating a lens of plastic material;

A daytime running light …"

Example 7, amend to read:

"Example 7:

…

The installation unit 1 (or 2) of the system bearing the above approval marks meeting the requirements of this Regulation (00 series of amendments) in respect of both a class C passing beam for left-hand traffic and a driving beam with a maximum luminous intensity comprised between $86\,250$ and $144\,642$ candelas. (indicated by the number 30), grouped with a front direction indicator lamp of category 1a, approved in accordance with the 01 series of amendments of Regulation No. 6.

…”

Table headed "For information only", to be deleted
Annex 8.

Paragraphs 1 to 1.1.2., amend to read:

"1. Cut-off definition
The "cut-off", when projected on the aiming screen as defined in Annex 9 to this Regulation, shall be sufficiently sharp to permit aiming; it shall comply with the following requirements.

1.1. Shape (see Fig. A.8-1) - See Figure 1
The "cut-off" shall provide:
- a horizontal "flat part" towards the left, and
- a raised "shoulder part" to the right;
in addition it shall be such, that after being aimed in accordance with the provisions in paragraphs 2.1. to 2.5. below:

The "cut-off" shall provide:
(i) a straight "horizontal part" towards the left;
(ii) a raised "elbow-shoulder" part towards the right.

In each case the "elbow-shoulder" part shall have a sharp edge.

1.1.1. The "flat part" shall not deviate vertically by more than:
- 0.2 deg up or down from its horizontal median line within 0.5 deg and 4.5 deg left of V-V, and
- 0.1 deg up or down within two thirds of said length.

1.1.2. The raised "shoulder part"
- shall have a sufficiently defined left edge, and,
- the line whose origin is at the intersection of line A and the V-V line to be constructed as a tangent to this edge, shall have an inclination versus the line H-H of at least 10 deg and not exceeding 60 deg (see Fig. A.8-1 below)."

Paragraph 1, delete footnote 1.

Paragraphs 2.2. and 2.3., amend to read:

"2.2. The beam shall be visually aimed by means of the "cut-off" (see figure 1 below). The aiming shall be carried out using a flat vertical screen set up at a distance of 10 m or 25 m (as indicated in section 9 of Annex 1) forward of the headlamp and at right angles to the H-V axis. The screen shall be sufficiently wide to allow examination and adjustment of the "cut-off" of the passing beam over at least 5° on either side of the V-V line."
2.3. for vertical adjustment: the horizontal part of the "cut-off" is moved upward from below line B and adjusted to its nominal position one percent (25 cm) below the H-H line;

Note: The scales are different for vertical and horizontal lines.

Figure 1

Insert new paragraphs 2.4. to 2.6., to read:

"2.4. for horizontal adjustment: the "elbow–shoulder" part of the "cut-off" shall be moved:
(a) from right to left and shall be horizontally positioned after its movement so that:
(b) above the line 0.2° D its "shoulder" shall not exceed the line A to the left and
(c) on the the line 0.2° D or below its "shoulder" should cross the line A and
(d) the kink of "elbow" should be located in the vicinity of the V-V line;

And

(c) the kink of "elbow" should be–located in the vicinity of the on the V-V line."
2.5. Where a headlamp so aimed does not meet the requirements set out in annex 3 its alignment may be changed, provided that the axis of the beam is not displaced:

Horizontally, from line A by more than: 0.5° to the left or 0.75° to the right

Vertically not more than 0.25° up or down from line B.

2.6. If, however, vertical adjustment cannot be performed repeatedly to the required position within the tolerances described in paragraph 2.5 above, the instrumental method paragraph 3. shall be applied to test compliance with the required minimum quality of the "cut-off" and to perform the vertical and horizontal adjustment of the beam."

Paragraph 2.3.1.(former), renumber as paragraph 2.7.

Paragraphs 2.4. to 2.7.(former), renumber as paragraphs 2.8. to 2.11.

Figures A-8-1 and A-8-2., to be deleted.

Insert new paragraphs 3 to and 3.2., to read:

"3. VERTICAL AND HORIZONTAL ADJUSTMENT

If the "cut-off" complies with the quality requirements of paragraph 2. of this annex, the beam adjustment may be performed instrumentally.

Note: The scales are different for vertical and horizontal lines.
3.1. **Vertical adjustment**

Moving upward from below the line B (see figure 2 below), a vertical scan is carried out through the horizontal part of the "cut-off" at 2.5° from V-V. The inflection point (where \( \frac{d^2 \log E}{dv^2} = 0 \)) is determined and positioned on the line B situated one per cent below H-H.

3.2. **Horizontal adjustment**

The applicant shall specify one of the following horizontal aim methods:

(a) The "0.2 D line" method (see figure 2 below).

A single horizontal line at 0.2° D shall be scanned from 5° left to 5° right after the lamp has been aimed vertically. The maximum gradient "G" determined using the formula \( G = (\log E_\beta - \log E_{(\beta + 0.1°)}) \) where \( \beta \) is the horizontal position in degrees, shall not be less than 0.08.

The inflection point found on the 0.2 D line shall be positioned on the line A.

---

**Note:** The scales are different for vertical and horizontal lines.
Three vertical lines shall be scanned from 2° D to 2° U at 1°R, 2°R, and 3°R after the lamp has been aimed vertically. The respective maximum gradients "G" determined using the formula:

\[ G = (\log E_\beta - \log E_{(\beta + 0.1°)}) \]

where \( \beta \) is the vertical position in degrees, shall not be less than 0.08. The inflection points found on the three lines shall be used to derive a straight line. The intersection of this line and the line B found while performing vertical aim shall be placed on the V line.

**Note:** The scales are different for vertical and horizontal lines.
Annex 9.
Paragraph 1.2., amend to read:

"1.2. The illuminance **luminous intensity** values shall be determined by means of a photoreceptor contained within a square of 65 mm side and set up to a distance of at least 25 m forward of the centre of reference of each lighting unit perpendicular to the measurement axis from the origin of the goniometer;"

Paragraph 1.4., amend to read:

"1.4. The luminous intensities are measured and specified in form of illuminance values perpendicular to the direction of measurement, and, for at a nominal distance of 25 m."

Paragraph 1.5., insert diagram 1 and amend to read:

"1.5. The angular co-ordinates are specified in deg on a sphere with a vertical polar axis according to CIE publication No. 70, Vienna 1987, i.e. corresponding to a goniometer with a horizontal ("elevation") axis fixed to the ground and a second, moveable ("rotation") axis perpendicular to the fixed horizontal axis. (See diagram 1)"

![Diagram 1](image-url)
Paragraphs 2.1. to 2.5. amend to read:

"2.1. In the case of replaceable filament lamps operated directly under vehicle voltage system conditions:

The system or parts thereof shall be checked by means of an uncoloured standard (étalon) filament lamp(s) designed for a rated voltage of 12 V. During checking of the system or part of, the voltage at the terminals of the filament lamp(s) shall be regulated so as to obtain the reference luminous flux 13.2 volts as indicated at the relevant data sheet of Regulation No. 37.

For the measurements, the flux of this filament lamp may differ from the reference luminous flux at 13.2 V specified in Regulation No. 37. In this case, the luminous intensity shall be corrected accordingly by the individual factor of the standard (étalon) filament lamp \( F = \frac{\Phi_{obj}}{\Phi\text{(Voltage)}} \).

The system or parts thereof shall be considered acceptable if the requirements of paragraph 6. of this Regulation are met with at least one standard (étalon) filament lamp, which may be submitted with the system.

2.2. In the case of a replaceable gas-discharge light source:

The voltage applied to the terminals of the ballast(s) is 13.2 V +/- 0.1 for 12 V systems.

The system or parts thereof using a replaceable gas-discharge light source shall comply with the photometric requirements set out in the relevant paragraphs of this Regulation with at least one standard (étalon) light source, which has been aged during at least 15 cycles, as specified in Regulation No. 99. The luminous flux of this gas-discharge light source may differ from the objective luminous flux specified in Regulation No. 99.

In this case, the measured photometric values shall be corrected accordingly—They shall be multiplied by a factor of 0.7 prior to the check for compliance.

2.3. In the case of a non-replaceable light source operating directly under vehicle voltage system conditions:

All measurements on lamps equipped with non-replaceable light sources (filament lamps and other) shall be made at 6.75 V, \( \sqrt[3]{13.2} \) V or 28.0 V, or at a voltage as specified by the applicant with respect to any other vehicle voltage system—The measured photometric values shall be multiplied by a factor of 0.7 prior to the check for compliance.
2.4. In the case of a light source, replaceable or non-replaceable, which is operated independently from vehicle supply voltage and fully controlled by the system, or in the case of a light source supplied by a special power supply, the test voltage as specified in paragraph 2.3. above shall be applied to the input terminals of that system/power supply. The test laboratory may require from the manufacturer this special power supply needed to supply the light sources.

The measured photometric values shall be multiplied by a factor of 0.7 prior to the check for compliance, except if this correction factor is already applied according to the provisions of paragraph 2.2. above.

2.5. LED module(s) shall be measured at 6.75 V, 13.5 V or 28.0 V respectively, if not otherwise specified within this Regulation. LED module(s) operated by an electronic light source control gear, shall be measured as specified by the applicant.

The measured photometric values shall be multiplied by a factor of 0.7 prior to the check for compliance.

B. JUSTIFICATION

At its fifty-seventh session the Working Party on Lighting and Light-Signalling (GRE) accepted a proposal tabled by the expert from GTB (ECE/TRANS/WP.29/GRE/2006/36) to specify the luminous flux of Regulation 37 light sources at approximately 13.2 volts instead of 12 volts. Having introduced these changes into Regulation No. 37, it is now appropriate to align Regulation No. 123 by revising the photometric provisions in the main body of the text and in the tables of Annex 3.

Additionally, the opportunity has been taken to;

a) include a revision of Annex 8 to align the cut-off requirements with those recently introduced into Regulations No. 98 and 112.

b) correct editorial errors that have been found during the detailed study of the regulation to introduce the above-mentioned amendments.

The result of this work, along with similar amendments also being proposed to Regulations Nos. 98 and 112, is an alignment of the passing beam cut-off shape and photometric requirements of all current headlamp regulations.

These proposed amendments to the photometric requirements do not affect the validity of lamps type approved to earlier versions of this regulation. However, it is necessary to introduce transitional provisions to allow for the changes to be made to the procedures in the photometric laboratories to accommodate the revised photometric tables and measurement protocols.
