Paragraph 6.1.3., amend to read:

“6.1.3. Apart. .. 12 V.

6.1.3.1. During ...Regulation No. 37.

However if a filament lamp of category H9 or H9B is used for the principal passing beam, the applicant may choose the reference luminous flux at 12.2V or 13.2V as indicated in the relevant data sheet of Regulation No. 37 and a reference stating which voltage was chosen for type approval shall be made in item 9 in the communication form of Annex 1.

6.1.3.2. In order to protect the standard (étalon) filament lamp during the process of photometric measurement it is permissible to carry out the measurements at a luminous flux that differs from the reference luminous flux at 13.2V. If the test laboratory chooses to carry out measurements in such a manner the luminous intensity shall be corrected by multiplying the measured value by the individual factor \( F_{\text{lamp}} \) of the standard (étalon) filament lamp in order to verify the compliance with the photometric requirements where:

\[
F_{\text{lamp}} = \frac{\Phi_{\text{reference}}}{\Phi_{\text{test}}}
\]

\( \Phi_{\text{reference}} \) is the reference luminous flux at 13,2V as specified in the relevant data sheet of Regulation 37

\( \Phi_{\text{test}} \) is the actual luminous flux used for the measurement.

However, where the reference luminous flux of 12.2V as specified in the data sheet for the category H9 or H9B is chosen, this procedure is not permitted.

6.1.3.3. The headlamp shall be considered acceptable if it meets the requirements of paragraph 6. with at least one standard (étalon) filament lamp, which may be submitted with the headlamp.”
