Border Crossing Point Challenges and Solutions

By Jan Tomczyk, FCILT
UNECE EATL Consultant
OSCE Handbook for Border Crossing Best Practices Consultant and
Customs Expert for the EU TRACECA Motorways of the Sea for the Black Sea and Caspian Sea Project
EATL Meeting Tashkent Uzbekistan 1 November 2010
Possible to balance BCP security and safety with trade facilitation

- No single challenge and therefore no single solution
- No silver bullet
- It's an inter BCP control agency challenge needing an inter Agency solution
- Best practice solutions exist

Aktau Seaport Border Line and Customs Control Area Sign February 2010
Evidence of BCP Challenges

Central transport route example:
- Trucks might wait 7 days in Aktau for the ferry to Baku
- By Decree the rail ferry and RO RO vessels cannot sail with partial loads or when empty
- 10 days to get rail through route rates

Turkish and other nationality trucks waiting outside Aktau seaport for up to 7 days for the ferry to Baku (February 2010)
Evidence of BCP Challenges

- Lack of container use in Caucasus and Central Asia and lack of container gantry cranes
- Lack of DTI and integrated port community IT systems (PCS)
- No SWS or port IBM

Lack of regular and predictable RO RO and rail ferry vessel services between Baku and other Caspian Sea ports. (Baku February 2010)
Evidence of BCP Challenges

- Piecemeal reform and modernisation: Customs making progress and implementing going it alone projects i.e., central IT clearing
- Turf protectionist management practices
- Lack of international best practice by all BCP control agencies
- Lack of BCP infrastructure and management procedure strategies and action plans
- BCP buildings not fit for purpose
Evidence of BCP Infrastructure Challenges

- Facilities: small and out dated
- IT: lack of DTI web based IT systems
- BCP access roads: narrow, congestion
- Services: limited number of trade logistics services, low quality,
- Security, safety and trade facilitation equipment: most trucks get scanned why?
  No balance because no risk assessment
Evidence of BCP Procedure Challenges: Legacy Mindset

- Using physical inspection controls instead of professional BCP best practice: RM and IMO
- Paper documents, stamps and signatures
- Do not see why they need to balance security and safety with trade facilitation
- Do not understand the impact of BCP congestion and truck time delays on national exporters especially on SMEs
- Do not understand the impact of BCP time delay on national job creation and poverty
Evidence of BCP Procedure Challenges: Legacy Mindset

- BCP staffs and managers do not know how BCP congestion and time delays and lack of predictable supply chain logistics give higher and longer warehouse product inventory duration for example 3 to 4 weeks in Almaty compared with 3 to 4 days in UK and Europe.
- Results in higher product prices in shops.
- Consumers pay the price for old practices.
Evidence of BCP Procedure

Challenges

- Lack of BCP management strategy so no policy, no action plan and no direction
- Lack change mandate so no BCP change management commitment and willingness to change
- Lack of BCP change priority because senior officials do not see quick fix BCP solutions during their office tenure
- Lack of “whole-of-government” approach so no integrated border management and no initiatives to eliminate “borders” between BCP agencies
Evidence of BCP Seaport Procedure Challenges

- No One Stop Shop: planned
- No SWS: planned
- No IBM: planned
- Import declaration IT systems: Yes
- Electronic signatures: No
- Declaration encryption: No
- UN Layout Key: Yes
- Goods physical inspection rate: 100-50%
- Compulsory temporary storage SVh: No
## Evidence of BCP Seaport Procedure Challenges

- Risk management: Yes
- Import Goods Pre-Release: No
- Export Goods Pre-Alert: Yes
- Joint Agency Inspection: ?
- WCO and EU Authorised Economic Operator
- Post Entry Audits: No
- Import Bank Guarantee + Insurance: Yes
- Customs break TEU seals: Yes
- EDI seals: planned
BCP Infrastructure Solutions

- Buildings fit for purpose: design, build and maintenance by specialist BCP agency
- Access roads for purpose: design, build and maintenance by specialist MoT team
- BCP building and access road standards: use international best practice to change national technical building standards
- Move BCPs away from towns and villages
BCP Infrastructure Solutions

- Joint Customs admins share buildings
- Eliminate BCP metal entry barrier gates
- Eliminate one lane access and one lane primary inspection: Ak Zhol – Kordai BCP; opportunity for change and modernisation
- Use multi lane primary inspection lanes each with a booth at the height of vehicle
- Passengers must stay in the car
- Dedicated fast track lane needed
- Conclusion: use better BCP asset management so open all lanes and assign staffs to each lane
BCP Procedure Solutions

- Eliminate BCP vehicle congestion: it’s not Customs who cause all the delays
- Segregate cars from trucks and buses
- Use joint agency inspection teams
- Use risk management and risk profiles
- Use Export and Import Pre Alert
- Divert TIR trucks to fast track lane: do not let TIR trucks queue with other vehicles to get to Customs and Passport Control
- Change Customs and Admin Codes: clerical errors are not attempts to defraud so stop fines
BCP Procedure Solutions

- Start Customs low risk due diligence with traders and intermediaries: Golden List, WCO AEO and EU AEO examples
- Reduce physical inspection from 100-50% and from 40-20% to 10-5% using risk assessment
- Improve BCP HRM: ethics code, better salaries and benefits, disciplinary code and continuous career training
- Use electronic DTI declarations and support documents eliminating paper documents
- Use electronic signature eliminating stamps
**BCP Procedure Solutions**

- Use Unique Consignment Reference No
- Use WCO SAFE Framework
- Start Port Community System (PCS) IT and communications and integrate with BCP
- Reduce post container and wagon dwell times: track goods and container status using PCS
- Start national and regional SWS: see UK, Croatia and Singapore best practices
- Use PPP to build new BCPs: see Turkey TOBB BCP best practice policies and results
BCP Procedure Solutions

- Use cross border best practices: Finland and Russian Federation example
- Use Polish and Belarus Customs BCP procedure example
- Prepare and implement BCP security and trade facilitation strategy: see Australian Customs 2015 Strategy document balancing security and safety with trade facilitation
- Use BCP Performance Indicators
Thank You for your attention
