

## Proposal for Supplement 10 of the 04 Series of amendments – Regulation No. 48 (Installation of Lighting and Light- signalling Devices)

Paragraph 6.6.8, amend to read as follows:

6.6.8. Tell-tale

Circuit-closed tell-tale mandatory. Flashing warning light **and/or** ~~which can operate in conjunction with~~ the tell-tale(s) specified in paragraph 6.5.8., **that otherwise operate independently, flashing simultaneously as hazard warning tell-tale.**

### JUSTIFICATION

The proposal is intended to align ECE 48 (Installation of Lighting and Light-signalling devices) with ECE 121 (Location and Identification of hand controls, tell-tales and indicators) and to eliminate inconsistencies between these two Regulations.

Currently, we have in ECE 121:

Table 1  
Symbols, their illumination and colours.  
[...]

No.	Column 1	Column 2	Column 3	Column 4	Column 5
	Item	Symbol <sup>2</sup>	Function	Illumination	Colour
5.	Direction indicator	 1, 3	Control	No	
			Tell-tale	Yes	Green
6.	Hazard warning signal	 1	Control	Yes	
			Tell-tale <sup>4</sup>	Yes	Red

<sup>1</sup> Framed areas of the symbol may be solid. (*no impact with this proposal*)

<sup>3</sup> The pair of arrows is a single symbol. When the controls or tell-tales for left and right turn operate independently, however, the two arrows may be considered separate symbols and be spaced accordingly.

<sup>4</sup> Not required when arrows of turn signal tell-tales that otherwise operate independently flash simultaneously as hazard warning tell-tale.

This proposal does not change the technical substance of the requirements.
