Proposal for amendments to Regulation No. 79

This document shall replace the wording of Option 4 in ECE/TRANS/GRRF/2016/45

I. Proposal

Insert a new paragraph 1.2.5., to read:

1.2.5. Steering systems exhibiting the functionality defined as Category B2, C, D or E in paragraphs, 2.3.4.1.3., 2.3.4.1.4., 2.3.4.1.5., or 2.3.4.1.6., respectively.

Paragraph 2.3.4.1., amend to read:

2.3.4.1. "Automatically commanded steering function (ACSF)" means the function within a complex electronic control system where actuation of the steering system can result from automatic evaluation of signals initiated on-board the vehicle, possibly in conjunction with passive infrastructure features, to generate continuous control action in order to assist the driver in following a particular path, in low speed maneuvering or parking operations.

2.3.4.1.1. "ACSF Category A" means a function that operates at a speed no greater than 10 km/h to assist the driver, on demand, in low speed or parking manoeuvering.

2.3.4.1.2. "ACSF Category B1" means a function which assists the driver in keeping the vehicle within the chosen lane, by influencing the lateral movement of the vehicle.

2.3.4.1.3. "ACSF Category B2" means a function which is initiated/activated by the driver and which keeps the vehicle within its lane by influencing the lateral movement of the vehicle for extended periods without further driver command/confirmation.

2.3.4.1.4. "ACSF Category C" means a function which is initiated/activated by the driver and which can perform a single lateral manoeuvre (e.g. lane change) when commanded by the driver.

2.3.4.1.5. "ACSF Category D" means a function which is initiated/activated by the driver and which can indicate the possibility of a single lateral manoeuvre (e.g. lane change) but performs that function only following a confirmation by the driver.

2.3.4.1.6. "ACSF Category E" means a function which is initiated/activated by the driver and which can continuously determine the possibility of a manoeuvre (e.g. lane change) and complete these manoeuvres for extended periods without further driver command/confirmation.

Paragraph 2.3.4.2., amend to read:

2.3.4.2. "Corrective steering function (CSF)" means the discontinuous control function within a complex electronic control system whereby, for a limited duration, changes to the steering angle of one or more wheels may result from the automatic evaluation of signals initiated on-board the vehicle, in order:
(a) to compensate a sudden, unexpected change in the side force of the vehicle, or;
(b) to improve the vehicle stability (e.g. side wind, $\mu$-split), or;
(c) to correct lane departure. (e.g. to avoid crossing lane markings, leaving the road).

to maintain the basic desired path of the vehicle or to influence the vehicle’s dynamic behaviour.

Systems that do not themselves positively actuate the steering system but that, possibly in conjunction with passive infrastructure features, simply warn the driver of a deviation from the ideal path of the vehicle, or of an unseen hazard, by means of a tactile warning transmitted through the steering control, are also considered to be corrective steering.

---

**Insert a new paragraphs 2.4.8. until 2.4.12. to read:**

2.4.8.  "Remote Controlled Parking (RCP)" means a function in category A ACSF, actuated by the driver, to provide parking or low speed manoeuvring. The actuation is made by remote control in close proximity to the vehicle.

2.4.9.  "Specified maximum RCP operating range ($S_{RCP_{max}}$)" means the maximum distance between the nearest point of the motor vehicle and the remote control device up to which ACSF is designed to operate.

2.4.10. "Specified maximum speed $V_{smax}$" means the maximum speed up to which an ACSF is designed to operate.

2.4.11. "Specified minimum speed $V_{smin}$" means the minimum speed down to which an ACSF is designed to operate.

2.4.12. "Specified maximum lateral acceleration $a_{ysmax}$" means the maximum lateral acceleration up to which an ACSF is designed to operate.

---

**Insert a new paragraph 5.1.6.2. to read:**

5.1.6.2  A CSF system shall be subject to the requirements of Annex 6.

5.1.6.2.1  Every CSF intervention shall immediately be indicated to the driver by an optical signal which is displayed for at least 1s or as long as the compensation exists, whichever is longer.

5.1.6.2.2  In the case of a CSF intervention which is based on the evaluation of the presence and location of lane markings or boundaries of the lane the following shall apply additionally:

5.1.6.2.2.1  In the case of an intervention longer than:

(a) 10s for vehicles of category M1 and N1, or
(b) 30s for vehicles of category M2, M3 and N2, N3,

an acoustic warning shall be provided until the end of the intervention.

5.1.6.2.2.2  In the case of two or more consecutive interventions within a rolling interval of 180 seconds and in the absence of a steering input by the driver during the intervention, an acoustic warning shall be provided by the system during the second and any further intervention within a rolling interval of 180 seconds. Starting with the 3rd intervention (and
subsequent interventions) the acoustical signal shall continue for at least 10 seconds longer than the previous warning signal.

Insert a new paragraph 5.6., to read:

"5.6. Provisions for ACSF

5.6.1. Special Provisions for Category A ACSF

Any system of Category A ACSF shall fulfil the following requirements.

5.6.1.1. General

5.6.1.1.1 The system shall only operate until 10 km/h (+2 km/h tolerance)

5.6.1.1.2. The system shall be active only after a deliberate action of the driver and if the conditions for operation of the system are fulfilled (all associated functions – e.g. brakes, accelerator, steering, camera/radar/lidar etc. are working properly).

5.6.1.1.3. The system shall be able to be deactivated by the driver at any time.

5.6.1.1.4. In the case where the system includes accelerator and/or braking control of the vehicle, the vehicle shall be equipped with a means to detect an obstacle (e.g. vehicles, pedestrian) in the manoeuvering area and to bring the vehicle immediately to a stop to avoid a collision.

5.6.1.2. Additional provisions for RCP systems

5.6.1.2.1. The parking manoeuvre shall be initiated by the driver but controlled by the system. A direct influence on steering direction, acceleration and braking via the remote control device shall not be possible.

5.6.1.2.2. A continuous actuation of the remote control device by the driver is required during the parking manoeuvre.

5.6.1.2.3. If the continuous actuation is interrupted or the distance between vehicle and remote control device exceeds the specified maximum RCP operating range ($S_{RCP_{max}}$) or the signal between remote control and vehicle is lost, the vehicle shall stop immediately.

5.6.1.2.4 If a door of the vehicle is opened during the parking manoeuvre, the vehicle shall stop immediately.

5.6.1.2.5 The system shall be designed to protect against unauthorized activation or operation of the RCP systems and interventions into the system.

5.6.1.2.6 The specified maximum RCP operating range shall not exceed 6m.

5.6.1.2.7 [If the vehicle has reached its final parking position either automatically or by confirmation from the driver, and the ignition is switched off, the parking braking system shall be engaged.]

5.6.1.3. System information data

5.6.1.3.1. Following data shall be provided together with the documentation package required in Annex 6 of this Regulation to the Technical Service at the time of type approval

5.6.1.3.1.1. The value for the specified maximum RCP operating range ($S_{RCP_{max}}$)

5.6.1.3.1.2. The conditions under which the system can be activated, i.e. when the conditions for operation of the system are fulfilled.
5.6.1.3.1.3 For RCP systems the Manufacturer shall provide the technical authorities with an explanation how the system is protected against unauthorized activation.

5.6.2. Special Provisions for ACSF Category B1

Any system of ACSF Category B1 shall fulfil the following requirements within the boundary conditions.

5.6.2.1. General

5.6.2.2.1. The activated system shall at any time ensure that the vehicle does not cross a lane marking under any condition specified in 5.6.2.1.3.

5.6.2.1.2. The vehicle shall be equipped with a means for the driver to activate and deactivate the system. The deactivation shall be possible at any time.

5.6.2.1.3. The system shall be designed so that excessive intervention of steering control is suppressed to ensure the steering operability by the driver and to avoid unexpected vehicle behavior, during its operation. To ensure this, the following requirements shall be fulfilled:

(a) The steering control effort necessary to override the directional control provided by the system shall not exceed 50 N.

(b) The specified maximum lateral acceleration \(a_{Y_{\text{max}}}\) generated by the system shall be within the limits as defined in the following table:

For vehicles of category \(M_1, N_1\)

<table>
<thead>
<tr>
<th>Speedrange</th>
<th>10-60 km/h</th>
<th>&gt;60-100 km/h</th>
<th>&gt;100-130 km/h</th>
<th>&gt;130 km/h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specified maximum lateral acceleration shall be lower than</td>
<td>3 m/s(^2)</td>
<td>3 m/s(^2)</td>
<td>3 m/s(^2)</td>
<td>3 m/s(^2)</td>
</tr>
<tr>
<td>Specified maximum lateral acceleration shall be higher than</td>
<td>no req.</td>
<td>0.5 m/s(^2)</td>
<td></td>
<td>0.3 m/s(^2)</td>
</tr>
</tbody>
</table>

For vehicles of category \(M_2, M_3, N_2, N_3\)

<table>
<thead>
<tr>
<th>Speedrange</th>
<th>10-30 km/h</th>
<th>&gt;30- 60 km/h</th>
<th>&gt; 60 km/h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specified maximum lateral acceleration shall be lower than</td>
<td>2.5 m/s(^2)</td>
<td>2.5 m/s(^2)</td>
<td>2.5 m/s(^2)</td>
</tr>
<tr>
<td>Specified maximum lateral acceleration shall be higher than</td>
<td>no req.</td>
<td>0.3 m/s(^2)</td>
<td>0.5 m/s(^2)</td>
</tr>
</tbody>
</table>

(c) The moving average over half a second of the lateral jerk generated by the system shall not exceed 5 m/s\(^3\).

5.6.2.2. Operation of ACSF Category B1

5.6.2.2.1. If the system is active an optical signal shall be provided to the driver.

5.6.2.2.2. When the system is temporarily not available, for example due to inclement weather conditions, the system shall clearly inform the driver about the system status by an optical signal, except if the system is in the OFF mode, e.g. switched off.

5.6.2.2.3. A system failure shall be signaled to the driver. The optical signal mentioned in paragraph 5.6.5.2.2. may be used for this purpose.
However, when the system is manually deactivated by the driver, the indication of failure mode may be suppressed.

5.6.2.2.4. When the system is active (i.e. ready to intervene or intervening) and in the speed range between 10 km/h or Vsmin, whichever is higher, and Všmax, it shall provide a means of detecting that the driver is holding the steering control.

If, after a period of no longer than 15 seconds the driver is not holding the steering control, an optical warning shall be provided.

If, after a period of no longer than 30 seconds the driver is not holding the steering control, an acoustical warning shall be provided in addition to the signal mentioned above.

The warnings shall be active until the driver is holding the steering control, or until the system is deactivated, either manually or automatically.

If the acoustic warning continues for more than 30 seconds the system shall be automatically deactivated. In this case the system shall clearly inform the driver about the system status by an emergency signal which is different from the warning signal, for at least five seconds or until the driver holds the steering control again.

5.6.2.3. System information data

5.6.2.3.1. Following data shall be provided together with the documentation package required in Annex 6 of this regulation to the Technical Service at the time of type approval

5.6.2.3.1.1. The conditions under which the system can be activated and the boundaries for operation. The vehicle manufacturer shall provide values for Všmax, Vsmin and ayšmax for every speed range as mentioned in the table of 5.6.2.1.3

5.6.2.3.1.2. Information about how the system detects that the driver is holding the steering control.

II. Justification

This document reflects the work of the Informal Working Group on ACSF.

The document is the result of 8 meetings.

It contains:

(a) Clarification of Corrective steering function (CSF) incl. defining of new requirements;

(b) Creation of new categories for Automatically commanded steering function (ACSF): Categories A, B1, B2, C, D and E;

(c) Proposed wording for requirements of Category A (incl. remote parking RCP), and Category B1;

(d) Provisions for systems of categories B2, C, D and E will be defined in the next sessions of the Informal Working Group on ACSF;

(e) The necessary test requirements will be defined in a separate informal document.
