TER High Speed Rail Master Plan

Phase one

INLAND TRANSPORT COMMITTEE

- An introduction to, and history of, High Speed Railways;
- A review of the benefits, political background, best practice and status of high-speed;
- Review of related work, initiatives, policies and studies in relation to high speed;
- Analysis of potential demand setting out calculation methodologies;
- Results, assessment, conclusions and recommendations from Phase 1 of the study.
TER High Speed Rail Master Plan - Phase 2

Recommendations

- Required international coordination of HSR projects;
- Use of high-speed lines for freight transport;
- Necessary development of multimodal nodes;
- Institutional support for implementation of HSR projects.
High transport demand potential in the TER area;
Large number of planned HSR projects;
Ensuring that railways become more competitive;
Financing of investments in the HSR is feasible.
Study on the compliance of TER countries’ infrastructure to technical parameters identified in international legal agreements;

Study on the development of ETCS Level 2;

Study on pool operation and development of locomotives in the TER countries;

New rail transport concept reflecting the recent changes in international market needs;

Study on the development of intermodal centres, including the identification of missing ones;

Project related to GIS.
Cooperation with other UNECE bodies

- Trans-European Motorways (TEM),

- Group of Experts on Benchmarking Transport Infrastructure Construction Costs (WP.5/GE.4).
Thank you!
