

Seminar on Classification of Energy Reserves and  
Energy Statistics,  
Beirut, Lebanon, 30 May – 2 June 2004.

## Discussion Group

### **Monthly Oil Statistics:**

**data availability, experience in data  
collection, publication**

by Károly Kovács, Chief, Energy and Industry  
Statistics Section, United Nations Statistics Division

# Data sources/availability of data

Availability of monthly crude oil data in your country:

- Indicate data collection procedure
- Indicate from how many producers could you get the data
- Indicate problems in the data collection procedure

|                 |         | Crude Oil |
|-----------------|---------|-----------|
| Production      |         |           |
| Imports         |         |           |
| Exports         |         |           |
| Stocks          | Closing |           |
|                 | Change  |           |
| Refinery Intake |         |           |

**How can the problems you  
face in the process of data  
collection be solved?**

# Publication of Monthly Crude Oil Data

- Have you contacted users of crude oil data investigating their needs – have you made adjustments upon learning the users' needs?
- Which of the above crude oil data are published in national publications? How often do you publish the data?
- Which regional or international organizations do you submit monthly crude oil data to?
- Is the unit of measurement we request to use (*thousand metric tons*) convenient for your office to use in producing the monthly crude oil statistics? Is it convenient for the users in your country?

## Petroleum Products

|                 |         | Petroleum Products |          |          |                    |             |              |
|-----------------|---------|--------------------|----------|----------|--------------------|-------------|--------------|
|                 |         | LPG                | Gasoline | Kerosene | Gas/<br>Diesel Oil | Fuel<br>Oil | Total<br>Oil |
| Refinery Output |         |                    |          |          |                    |             |              |
| Imports         |         |                    |          |          |                    |             |              |
| Exports         |         |                    |          |          |                    |             |              |
| Stocks          | Closing |                    |          |          |                    |             |              |
|                 | Change  |                    |          |          |                    |             |              |
| Demand          |         |                    |          |          |                    |             |              |

# Availability of monthly petroleum data in your country:

- Indicate problems in the data collection procedure
- How do you estimate domestic demand

How can the problem you face in the process of data collection be solved

## Publication of Monthly Petroleum Products Data

- Have you contacted users of petroleum products data investigating their needs – have you made adjustments upon learning the users' needs?
- Which of the above petroleum products data are published in national publications? How often do you publish the data?
- Which regional or international organizations do you submit monthly petroleum products data to?
- Is the unit of measurement we request to use (*thousand metric tons*) convenient for your office to use in producing the monthly petroleum product statistics? Is it convenient for the users in your country?
