Methodology for Determining the GHG Emissions Associated with the Production, Conversion/Conditioning and Transport of Hydrogen

Dr. Laurent Antoni
Executive Director

laurent.antoni@iphe.net

Group of Experts on Renewable Energy - UNECE
Tenth session
12 September 2023, Geneva, Switzerland

THE CREATION OF A GLOBAL MARKET

Key Drivers: based on unique National Circumstances

- **Environmental Benefits – Climate Change**
 - Climate Change, Clean Air/Local Air Quality, Noise Pollution
- **Energy Security**
 - Security of Supply and Resource Diversity
- **Energy System Resiliency and Stability**
 - Effective Use of Variable Generation – grid services, storage at scale, and sector coupling
 - Distributed Generation Option
- **Economic Growth: Innovation & Technology Leadership**
 - Strength of the industry
 - Capacity of innovation
 - Skilled Jobs and Manufacturing Opportunities

Key Challenges: Need to Get to a Global Scale

1. Innovation

- *Must get **low-carbon hydrogen cost competitive***
- ***Skilled workforces** from engineers to operators: initial cursus and lifelong trainings*

2. Infrastructure Investment

- **Installation of the massive production capacities**
- **Efficient Transmission/Transportation**

3. Policy and Regulatory Framework

- *Stable and strong Policy Signals*
- *Regulatory Certainty*
- *Market Transparency*

THE ROLE OF INTERNATIONAL MULTILATERAL COLLABORATIONS

International collaborations and coordination are essential

International Hydrogen Initiatives

BREAKTHROUGH
AGENDA

Public-sector-led global Hydrogen Initiatives	IPHE	CEM Hydrogen Initiative	MI's Clean Hydrogen Mission	G7's Hydrogen Action Pact	UNDP's Hydrogen Initiative
	Hydrogen Energy Ministerial (HEM)	UNIDO's Hydrogen Initiative	IEA's Hydrogen TCP	IEA's Fuel Cells TCP	
Private-sector-led Global Hydrogen Initiatives	Hydrogen Council	Green Hydrogen Organisation	First Movers Coalition	Green Hydrogen Catapult	
Public & Private-sector Global Hydrogen Initiatives	IRENA's Collaborative Framework on Green Hydrogen	WEF's Accelerating Clean Hydrogen Initiative	Breakthrough Energy Catalyst		
Country-led International Initiatives	H2Global (DE)	Quad Clean Hydrogen Partnership (US, JP, AU, IN)	[Others to be added]		
Regional Hydrogen Initiatives	African Green Hydrogen Alliance	Hydrogen Europe	H2 LAC	MENA Hydrogen Alliance	[Others to be added]
Global Initiatives working on related topics	CEM Investment and Finance Initiative	Mission Possible Partnership	Green Grids Initiative	Breakthrough Energy Catalyst	Development Banks

Not an Exhaustive List

Not yet included in the landscape map

IPHE: Global Government-to-Government Partnership to Accelerate Hydrogen and Fuel Cell Deployments

Formed in 2003

Chair

Vice-Chairs

Priorities:

1. Share Information on Latest Developments
2. Inform Future Government Policy
3. Foster Collaboration

The IPHE addresses these Priorities by,

- Coordinating and Sharing Information
- Regular Country Updates – Country Profiles at www.iphe.net
- Working Groups:
 1. Regulations, Codes, Standards & Safety (RCSS) – TFs: Maritime & Bulk Storage
 2. Education & Outreach (E&O) – Early Career Network
- Task Forces:
 1. H₂ Production Analysis – Working Paper Ver 3 Published
 2. H₂ Trade Rules – Paper Published, Potential new work
 3. H₂ Certification Mechanisms
 4. Skills – Terms of Reference under Development

And coordinate with other International initiatives including IRENA, IEA, CEM/MI, WEF, H2 Council, and the Breakthrough Agenda

23 Countries & European Commission

Implementing international
regulations, codes and standards

IPHE Hydrogen Production Analysis Task Force

What does “Clean Hydrogen” mean?

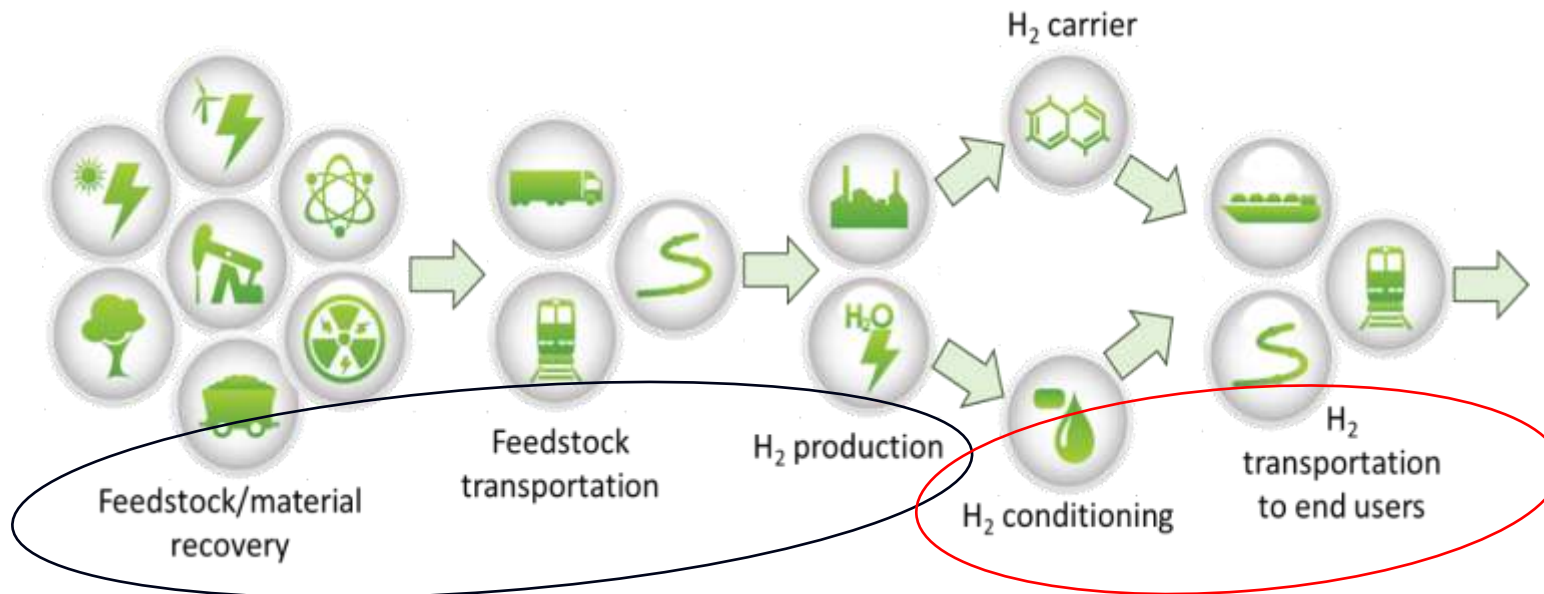

- ‘Quantification Methodology’ Working Paper Version 3 Co-leads France, EU, USA
- Published Methodology for Determining the GHG Emissions Associated with the Production of Hydrogen Working Paper Version 3 July 2023

Methodology for Determining the Greenhouse Gas Emissions Associated With the Production of Hydrogen

A Working Paper Prepared by the IPHE Hydrogen Production Analysis Task Force

Schematic of “Well-to-Gate” system boundary adopted

VERSION 3 - JULY 2023

https://www.iphe.net/files/ugd/45185a_8f9608847cbe46c88c319a75bb85f436.pdf

**Handed over to ISO TC197/SC1/WG1
Convener France, Project leader Brazil**

IPHE Hydrogen Production Analysis Task Force

‘Quantification Methodology’ Working Paper Version 3 Co-leads France, EU, USA

- Published Methodology for Determining the GHG Emissions Associated with the Production of Hydrogen Working Paper Version 3 July 2023

Hydrogen Production Pathways:

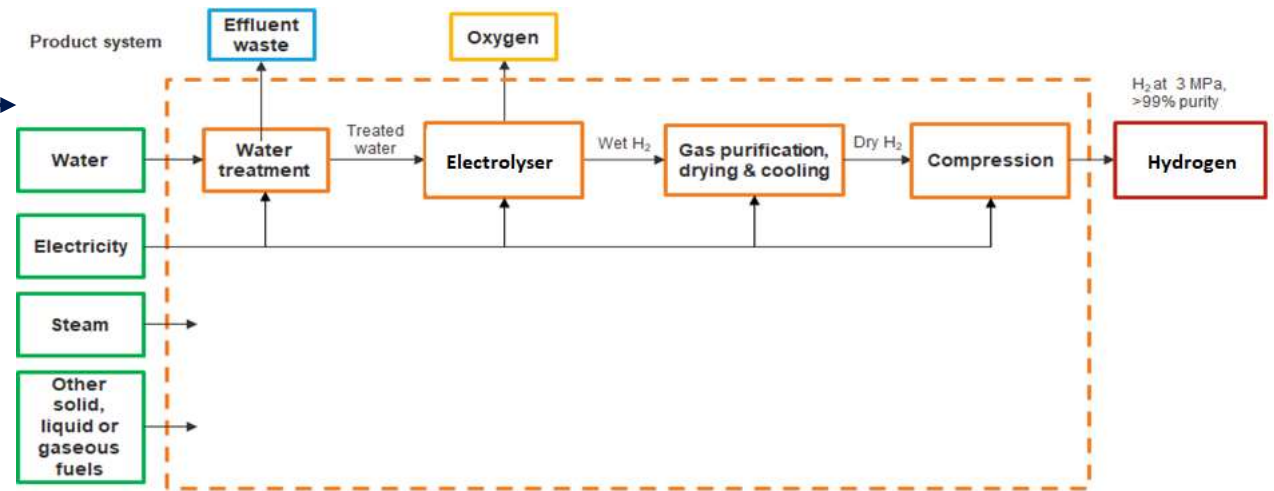

- Electrolysis
- Steam Methane Reforming with CCS
- Industrial By-Product
- Coal Gasification with CCS
- Biomass
- Auto-Thermal Reforming with CCS

Conditioning and Carriers of H₂

- Liquefaction
- Ammonia
- Liquid Organic Hydrogen Carriers

Transportation of H₂

- Marine; Pipeline; Mobility – Train, Truck

*Three main types of electrolyzers include alkaline, polymer electrolyte membrane (PEM) and solid oxide (SOEC)

IPHE Hydrogen Production Analysis Task Force

Figure 2.2 Comparison of the emissions intensity of different hydrogen production routes, 2021

The GHG Emissions associated with the Production of Hydrogen depend on:

- the primary energy
- AND
- the production pathway

IEA, CC BY 4.0.

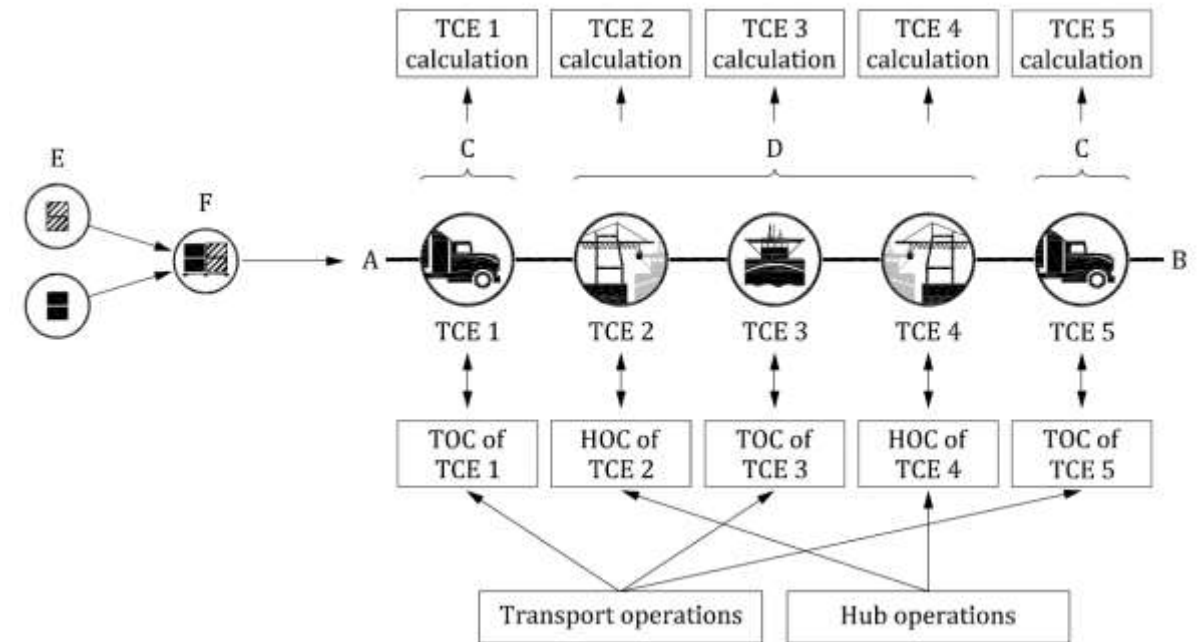

IPHE Hydrogen Production Analysis Task Force

- GHG Emission link to the transportation of Hydrogen and Hydrogen carriers**

Principles of Quantification of GHG Emissions Related to Transport Chains (TC), Transport Chain Elements (TCE), Transport Operation Categories (TOC) and Hub Operation Categories (HOC)

Diagrammatic relationship between operations and TCEs for an example freight transport chain (modified from ISO 14083:2023)

Illustrative example of a multi-element freight transport chain [modified from ISO 14083:2023]

Hydrogen Certification Mechanisms

Global hydrogen trade currently blocked by lack of mutual recognition of standards and risk of regulatory fragmentation

Multiple certification schemes are **emerging** across jurisdictions, with **more under development...**

...however standards are being developed independently, with no **mutual recognition / interpretability...**

...which causes a **risk of regulatory fragmentation, limiting global and cross-border hydrogen value chains and trade**

Conclusions: Hydrogen, the energy for today!

International collaboration and coordination are key

Business-as-Usual is not sufficient given energy, climate and societal drivers. Crucial for governments to facilitate efficient and effective international hydrogen markets

Robust, stable and transparent regulations, codes and standards are key

Continuous and strong involvement of public and private stakeholders is welcome

Thank you
