Working paper No. 7/Corr.1

## **HOUSEHOLD SCENARIOS FOR THE EUROPEAN UNION**

### **CORRIGENDUM**

Paper submitted by Statistics Netherlands<sup>1</sup>

In Working Paper No. 2 a footnote should be inserted at the end of paragraph 2. The text of the footnote reads as follows:

For several reasons this first set of internationally consistent household scenarios should be used with caution. First, due to the use of sample survey data (LFS), the base population structure is subject to measurement errors (see also Alders and Manting, 1998a). Second, most countries of the European Union have little or no experience with household projections, and therefore our knowledge on their errors is limited. Third, first comparisons with observed trends indicate that the Family Scenario might underestimate the number of one-person households in the short run.
