DmrType: ST Request for Message in Development (MiD)

Message: MESGEV **DMRAction:** A **NameChange**

Text1-1 **Text1-2** **Text1-3** **Text2** **Text3-1** **Text3-2** **Text4-1**

Industry:

BusinessNeed: When a social coverage depends on an individual contractual basis, the knowledge of some events arising to a contract beneficiary is of the utmost importance for the social organisation (pension funds, insurance companies or other institutions) managing the contract:
an event may have an effect on the contributions amount paid by the employee or may trigger the payment of a benefit.

As the details concerning an event are sent through employers, to facilitate the data exchanges, the structure of the message allows to group together several events in relationship with an employee.

BOILERPLATE

Version:

Release:

ControllingAgency: RT

Revision: 0

Introduction: This specification provides the definition of the Social event message (MESGEV) to be used in Electronic Data Interchange (EDI) between trading partners involved in administration, commerce and transport.

Scope: The Social event message may be used for both national and international applications. It is based on universal practice related to administration, commerce and transport, and is not dependent on the type of business or industry.

Functional Definition: A message to convey the various information related to events occurring during an employee's life and affecting the employee's situation regarding the contract(s) that his (her) employer may have implicitly or explicitly signed with administrative organisations or companies acting in the social domain.
This message, exchanged between employers and social partners, is designed to

UN/EDIFACT Data Maintenance Request

MESSAGE STATUS CHANGE

Page 2 of 12

take into account social data flows related to employees on an event point of view.

Principles: Several different events affecting the activity or the situation of an employee may be reported either as soon as they occur or grouped together in the same message. The data issue date provided in the message header section is important because it fixes the chronology of the events.

It is recommended to provide also the date when data were issued in the message sent just before in order to allow the receiver to check the consistency of the exchanges sequence.

The message structure is based on three main hierarchical levels of information:

- employer
- employee
- event

An event may be associated with a specific formality that employers have to fulfill regarding a particular administrative regulation.

For example, a new employee hiring may be an event to transmit to an insurer for a subscription procedure but also to an administrative body for a mandatory statement procedure.

The message may be sent back by the receiver in order to transmit an acknowledgement or application errors. It is possible to provide errors at the message level, at the employer level, at the employee level or at the event level.

BOILERPLATE TEXT

Oper	Pos	Seg	Name	Status	Rpts	Lvl
	0010	UNH	Message header	M	1	0
			<p>A service segment starting and uniquely identifying a message. The message type code for the Social event message is MESGEV.</p> <p>Note: Social event messages conforming to this document must contain the following data in segment UNH, composite S009:</p> <p>Data element 0065 MESGEV 0052 0 0054 99B 0051 RT</p>			
	0020	BGM	Beginning of message	M	1	0
			A segment to identify the function of the message and to transmit its identification number.			
	0030	DTM	Date/time/period	M	9	1
			A segment to provide any date/time relevant to the whole message, such as the issue date/time of data contained in the message.			
	0040	RFF	Reference	C	9	1
			A segment to specify any reference relevant to the whole message. One of the intended uses of this segment is to provide the reference of a previous message containing application errors.			
	0050	DOC	Document/message details	C	9	1
			A segment to give information about any document associated with the whole content of the message. One of the intended uses of this segment is to specify details of the document that the receiver will send back for acknowledgement.			
	0060	CUX	Currencies	C	1	0
			A segment specifying the default currency used to express the monetary amounts contained in the whole message.			
	0070	GEI	Processing information	C	1	0
			A segment to indicate a general processing information related to the whole message. The intended use of this segment is amongst others to indicate the way to process data related to changes: - only changes are transmitted, - the whole updated information is sent.			
	0080	S1	Segment Group 1	M	9	1
			A segment group identifying and providing details relating to parties at message level, such as message sender and receiver.			
	0090	PNA	Party identification	M	1	1
			A segment providing the names and identifier of the parties involved in the transmission of the message or in a transaction associated to the message.			
	0100	ADR	Address	C	9	2
			A segment to specify addresses related to the parties.
