The following Western European TAG comment should be added, for information, to the Status 0 message QLSPEC message. This comment has been added at the request of the French and German delegations to GE.1.

"This is status 0 not a status 1 request. The BIN segment cannot be handled by the current syntax. WETAG also objects to the use of repeating triplets and some layout problems such as: use of plusses (+); indication of segment tables; no definition of data elements; the notation of data elements is not understandable". [March 1995]

The Group of Experts is invited to:
