

Submitted by IMMA On behalf of ACEM

ACEM Commitment on the adoption of an automatic headlamp on specification

The motorcycle and moped manufacturers represented by ACEM have adopted the following commitment:

" Starting from 2002, we, the Powered Two-Wheeler (PTW) manufacturers represented by ACEM, will begin to introduce on the market models fitted with Automatic Headlamp On. By June 17th 2003 all new vehicles will comply with that specification.

The Automatic Headlamp On (AHO) specification means that the headlamp will be lit as soon as the engine is started.

1. The conspicuity of PTWs is likely to be improved.
2. A growing number of countries require PTWs to be used with their headlamps on at all times and therefore there will be a cost-saving through specification harmonisation and simplification of switch-gear "
